# Product Overview

## System Requirements

To ensure that your D-ViewCam Plus system can maintain high video monitoring and recording performance, certain minimum system configurations are required.

CPU	Intel Core 2 Duo E5300
RAM	2 GB
Hard Disk	250 GB or above
Motherboard	Intel P55, H55, X58, P45, P43 chip, MB vendor ASUS Gigabyte or MSI with Intel Chipset recommended
Display card	ATI Radeon 4650 or above (ATI Driver V11-2 recommended)
Ethernet	100Base-T or above, Gigabit LAN recommended
OS	32 bits: Microsoft Windows XP pro SP3/ Vista SP1/ Win 7 SP1/ Win 8 64 bits: Win 7 SP1/ Win Server 2008 R2/ Win 8/ Win Server 2012
<b>Note:</b> Users need to disable the Metro function of Windows 8 completely when starting D-ViewCam	

**Note:** To determine the minimum hardware requirements for your planned surveillance system if it is not listed in the above table, please consult the SI (system integrator), the reseller, or D-Link Technical Support.

Note: Recording video over a long period of time will consume large amounts of disk space. Make sure that you have enough disk space available if you want to use the recording function. You can still complete the installation even if you have less than the suggested free disk space.

## **Introduction**

Thank you for purchasing D-ViewCam Plus. This state-of-the-art video management software is a comprehensive surveillance system designed to centrally manage up to 32 network cameras, while displaying real-time information on the screen. This software allows you to build a powerful surveillance system at your home or small business by using D-Link network cameras and the latest features offered by the D-ViewCam Plus software.

## **Key Features**

- D-ViewCam Plus automatically locates and adds network cameras in the local network
- Storage management for recording files
- Single and multiple video stream monitoring (up to 32 video channels)
- Two-way audio communication
- Intelligent filter and search capabilities for scheduling recording and/or event recording

## Installing Your Network Camera

Before installing D-ViewCam Plus, please make sure you have installed your D-Link network camera(s) that will be managed by D-ViewCam Plus.

**Step 1** - Follow the installation procedures that came with your network camera(s) to complete the camera installation process.

**Step 2** - Verify that you are able to view the video images from the network camera (s) by accessing the camera's web-based configuration utility. It is recommended that all network cameras be installed in the same subnet as your management PC running the D-ViewCam Plus software.

**Step 3** - Please refer to the **Add camera(s)** section in the next section **Software Installation** for more information.

# Software Installation

Download the D-ViewCam Plus software from the following site:

**<http://download.hq.dlink.com/DCS-250/>**

Extract the software to a folder, then run the **SetupTool.exe** file.

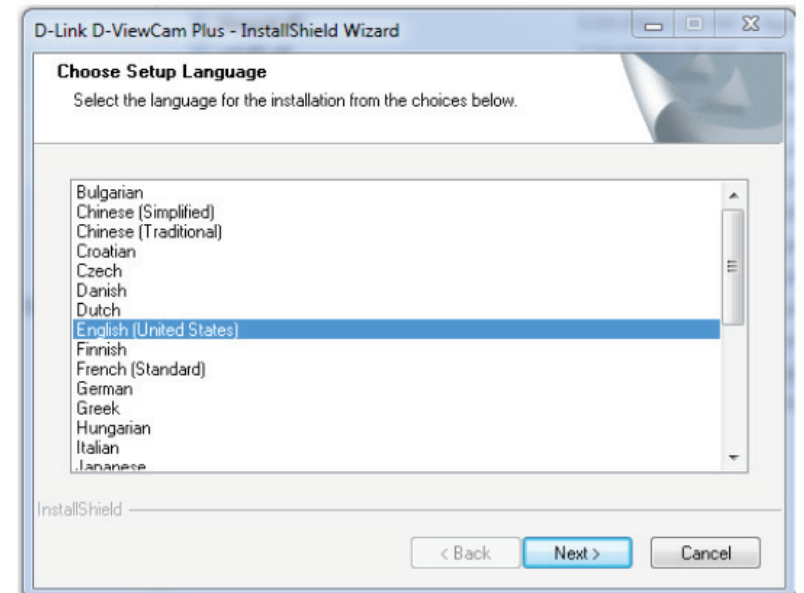

SetupTool.exe

Step by step instructions are shown below if you are using Windows® XP. However, similar instructions and windows are displayed for other Windows operating systems.

1. Click **Next** to continue.

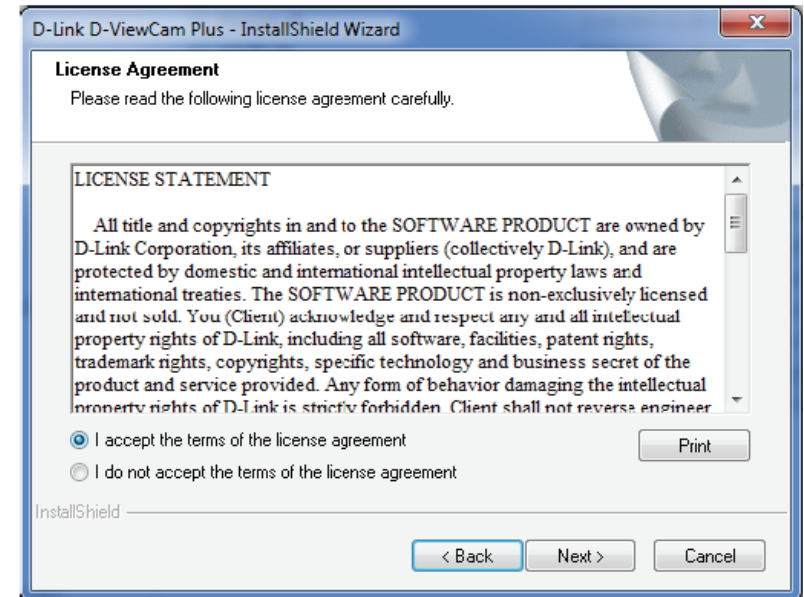

2. Select which language you want to install it, Click **Next** to continue.

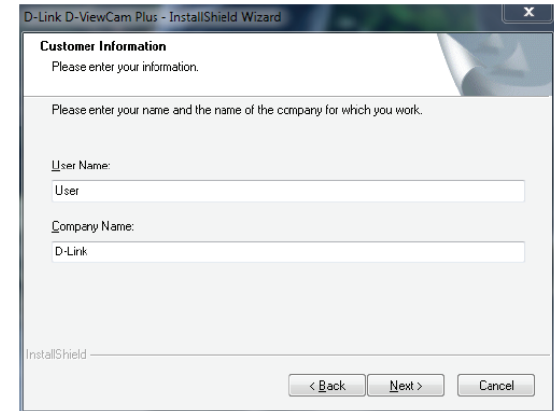

3. Click **Next** to continue.

4. Select **I accept the terms of the license agreement**. Click **Next** to continue.

5. Enter the **User Name** and your **Company Name**. Click **Next** to continue

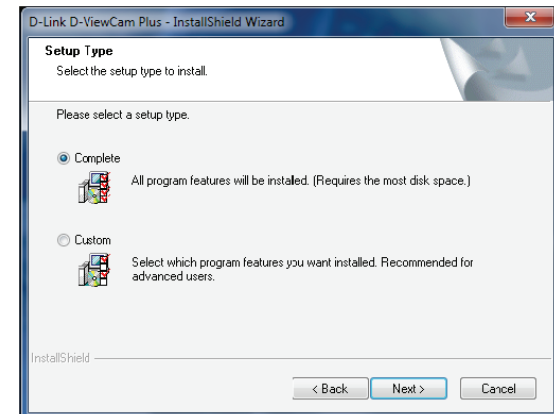

6. Select **Complete** to install the entire package or **Custom** to choose which programs to install. Click **Next** to continue.

#### COMPLETE SETUP TYPE

Select **Complete** to install all the program features into the default directory (requires the most disk space) and click **Next** to continue.

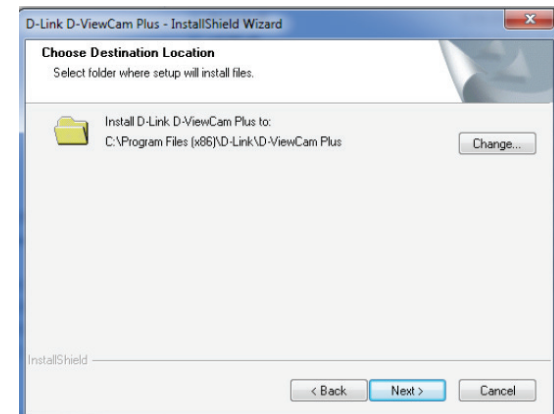

#### CUSTOM SETUP TYPE

Select **Custom** to change the installation directory and/or program features. This option is recommended only for advanced users.

7. Select **Custom**, and then click **Next**. The Choose Destination Location window will appear.

8. To install to a different folder, click **Change** and select another folder. Click **Next** to choose with components are installed.

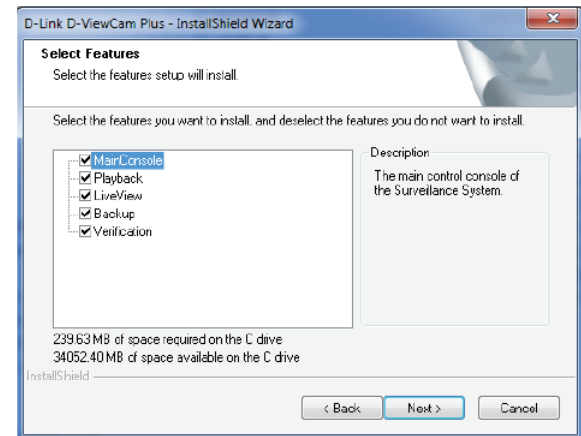

9. Select the features you want to install and click **Next** to continue. The five main features in the server setup process are:

- Main Console
- Playback
- LiveView
- Backup
- Verification

10. To continue the installation to the specified folder with the chosen components, click **Install**.

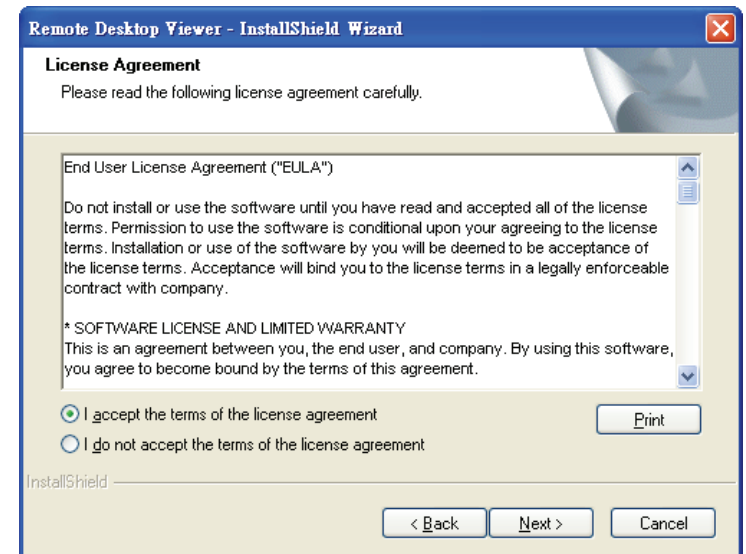

11. Click **Finish** to complete the installation.

## Remote Desktop Viewer Installation

Remote Desktop Viewer allows for remote access to the Main Console and Setup configuration.

1. In the InstallShield Wizard screen, click **Remote Desktop Viewer** and then click **Next** to continue.
2. Select **I accept the terms of the license agreement**. Click **Next** to continue.

3. Enter the **User Name** and your **Company Name**. Click **Next** to continue.
4. Select **Complete** to install the entire package or **Custom** to choose which programs to install. Click **Next** to continue.

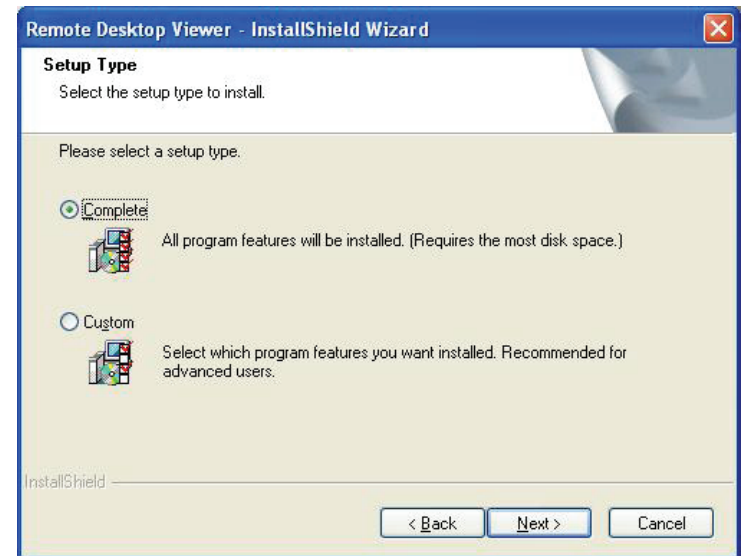

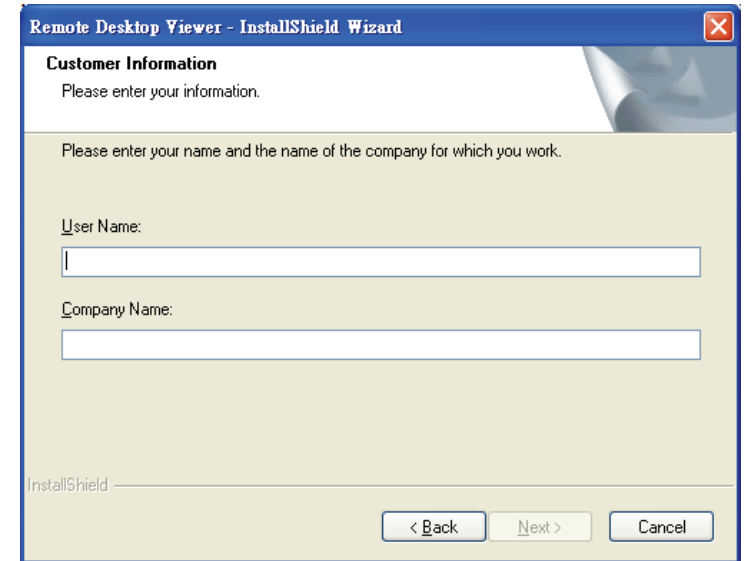

### COMPLETE SETUP TYPE

Select **Complete** to install all the program features into the default directory (requires the most disk space) and click **Next** to continue.

### CUSTOM SETUP TYPE

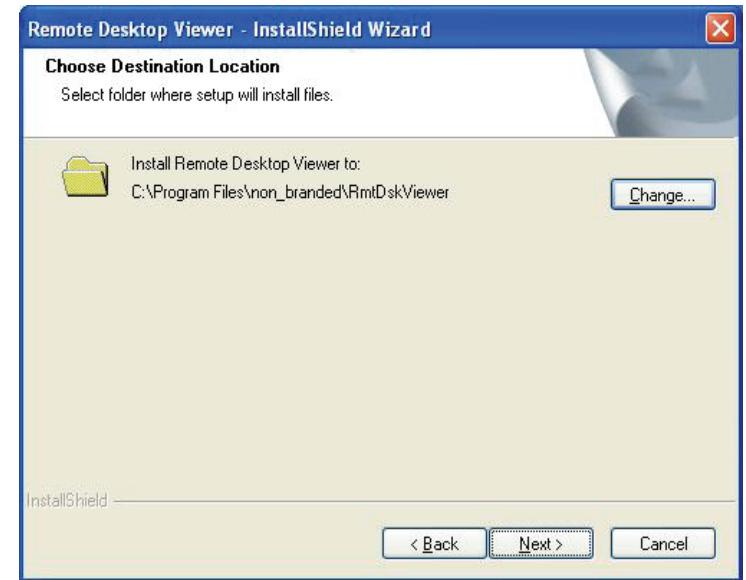

Select **Custom** to change the installation directory and/or program features. This option is recommended only for advanced users.

5. Select **Custom**, and then click **Next**. The **Choose Destination Location** window displays.

6. To install to this folder click **Next**. To install to a different folder, click **Change** and select another folder.
7. Select **Remote Desktop Viewer** and click **Next** to continue.

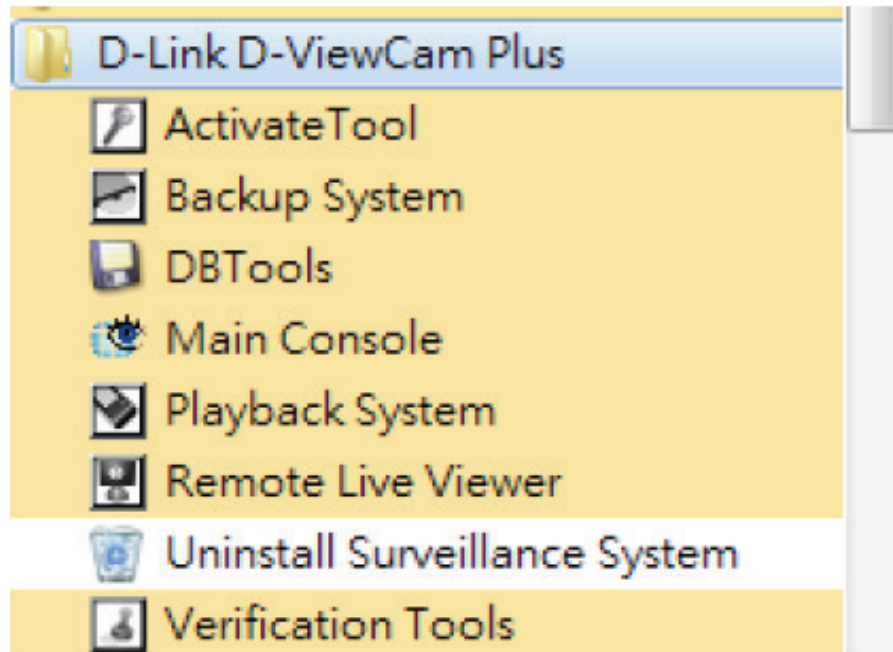

8. Click **Install** to start the installation.
9. Click **Finish** to complete the installation.

## D-ViewCam Plus Login

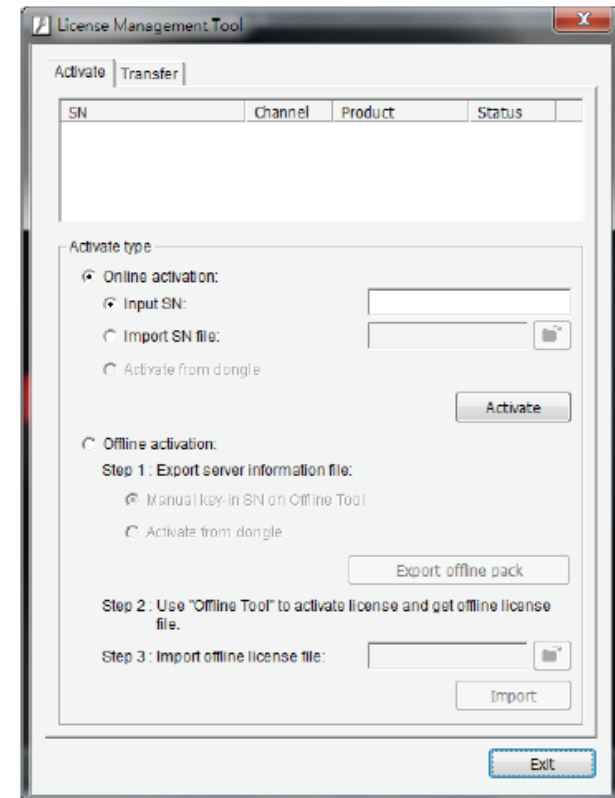

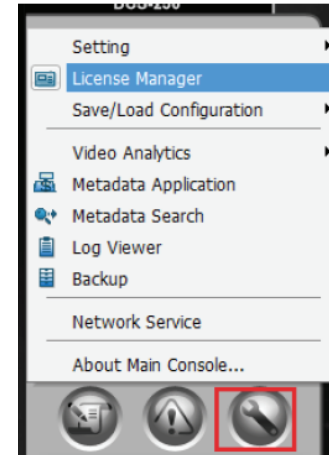

Once the console loads, enter the **User Name** and **Password** and click **OK**.

## Activate Software License(s)

1. Go to **Main Console > General Setting** and open the **License Manager** tool.
2. Select On line network environment.
3. Select Input SN to enter the Serial Number, Import the SN file, or Import license file to activate the license.
4. Click Activate. After the software license is activated successfully, please restart the Main Console.

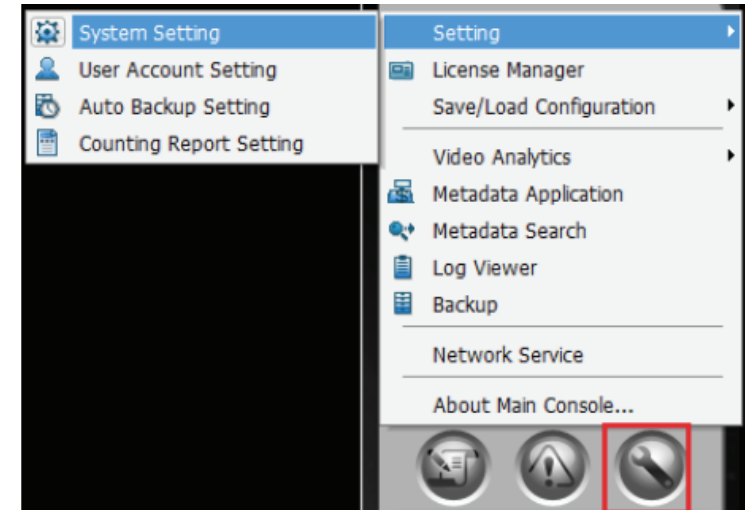

Note: Please refer to the License Management Tool section for advanced settings.

## Add Camera(s)

1. Once the console loads, click **General Setting** , then click **Setting**, and select **System Setting**.
2. Select the **Camera** tab, then click **Search**  to find the network camera (s) that are on your local area network (LAN).

The system automatically searches for all the network cameras that are on your local area network (LAN).

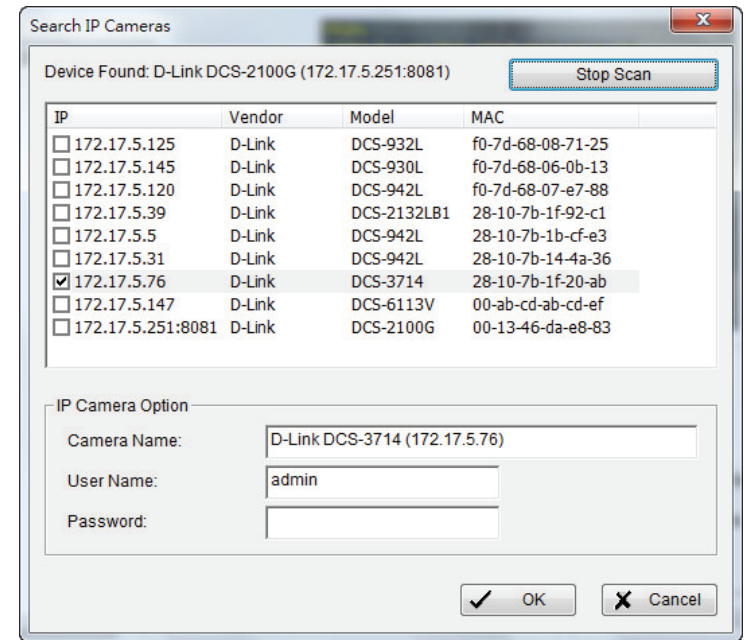

3. Select a **Camera**.

**Note:** If your network cameras support UPnP, follow step 3. Otherwise, skip to step 5.

- Select one of the network cameras that are available, enter a **Camera Name** and then enter the **User Name** and **Password**. Click **OK** to add the camera.

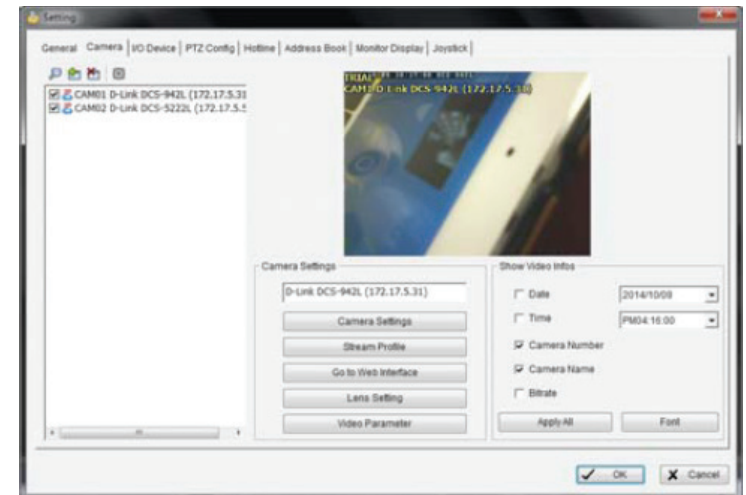

- If your camera(s) does not support UPnP, you can manually add a camera.

Click **Insert**  to manually add network camera(s) that are on your local area network (LAN).

Delete: Click  **Remove** button to remove the selected IP camera(s) from the system. Click **OK** to finalize the modification.

Config: Click  **Config** button to obtain the IP Camera/Video Server Setting panel. You can modify the IP camera settings with the Setting panel.

6. Enter the following Network information for your camera:
  - **Name** - Enter a name for your camera.
  - **IP Address** - Enter the IP address of this camera. If you want to use a domain name, then select DNS and enter the domain name.
  - **Port** - 80 is the default port.
  - **User Name** - Enter a user name for this camera.
  - **Password** - Enter a password for this camera.
  - **Protocol** - Select **TCP**, **UDP**, **HTTP**, or **HTTPS**.

Enter the following **Device** information for your camera:

- **Auto Detect** - Click to detect the vendor and model information.
- **Vendor** - Select the vendor's name from the drop-down menu.
- **Camera Model** - Select the camera model from the drop-down menu.
- **Video Channel** - Select the video channel you want to assign the camera to.

7. Click **OK** to add your camera.

IP Camera / Video Server Setting

**Network**

Name: link DCS-942L (172.17.5.31)

IP Address: 172 . 17 . 5 . 31  DNS

Camera: 1, DI: 0, DO: 0

# D-ViewCam Plus Interface Overview

This section will show you how to start and configure D-ViewCam Plus.

To start D-ViewCam Plus, go to

**Start > All Programs > D-Link D-ViewCam Plus > Main Console.**

Enter **Admin** as the default username and your password. Click **OK** to log into the system.

**Note:** Refer to the **User Account Setting** section for User Account information.

## Main Console

- |   |                       |   |                               |
|---|-----------------------|---|-------------------------------|
| 1 | Main Display Area     | 4 | General Controls and Settings |
| 2 | Exit/Minimize Program | 5 | PTZ Features                  |
| 3 | System Information    | 6 | Split-Screen Options          |

## Log Out/Exit Program/Minimize Window

Click to log the current user out or to close the D-ViewCam Plus program.

Click to minimize the window.

## Split Screen Options

Select a split-screen display layout by clicking on the desired layout icon. The system provides many different split screen modes. To switch to a single camera display, double-click the camera's image. To return to the previous configuration screen, press the **Esc** key or double-click on the screen again.

 Displays 4 screen	 Divides into 1 screen	 Divides into 10 screens	 Divides into 13 screens
 Divides into 6 screens	 Divides into 4 screens	 Divides into 13 screens	 Divides into 17 screens
 Divides into 9 screens	 Divides into 6 screens	 Divides into 16 screens	 Switch to full screen
 Divides into 12 screens	 Divides into 9 screens	 Divides into N screens	 Rotate all screens

## Wide Screen Options

The following options are only available under wide screen resolutions (1440x900, 1680x1050, 1920x1080, 1920x1200)

Divide into 4 screen(s)

Divide into 9 screen(s)

Divide into 6 screen(s)

Divide into 12 screen(s)

### Information Window

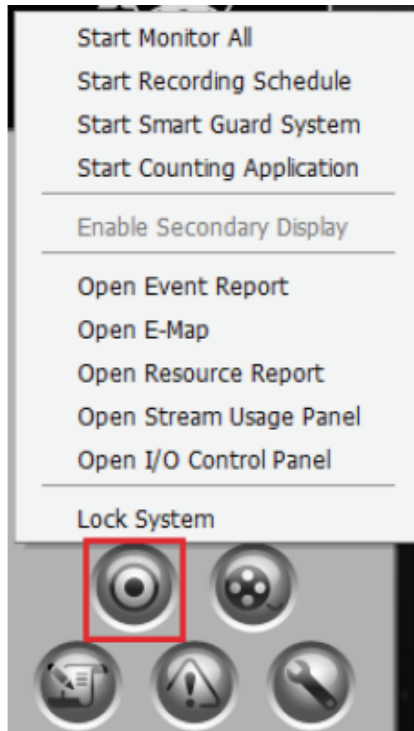

Display date, time, free Disk space, IP Camera Bit Rate customized text and further information like temperature, fan speed, system resources, and network utilization

5 network service icons indicate which services are switched on or off.

	Live View	Playback	3GPP	Desktop	CMS
Start					
Stop					

Note: To customize information about window's setting, go to General Setting > Setting > System Setting > General > Status Display.

## Start Monitor

Option	Function
<b>Start/Stop Monitor All</b>	Click to start or stop all monitoring functions.
<b>Start/Stop Recording Schedule</b>	Click to start or stop the recording schedule.
<b>Start/Stop Smart Guard System</b>	Click to start or stop the smart guard system.
<b>Start/Stop Counting Application</b>	Click to start or stop the counting application.
<b>Enable Secondary Display</b>	Click to enable secondary monitor display.
<b>Open Event Report</b>	Click to open the event report which will log any events.
<b>Open E-Map</b>	Click to open E-Map which monitors all devices with map indicators.
<b>Open Resource Report</b>	Click to open Resource Report
<b>Open Stream Usage Panel</b>	Click to open Stream Usage Panel for monitoring stream usage status.
<b>Open I/O Control</b>	Click to open the I/O control window, monitor DI/DO, and manual triggering of DO devices.
<b>Lock System</b>	Click to lock the system.

**Notes:**

1. To automatically activate the Recording Schedule and Smart Guard when the MainConsole starts, go to **General Setting > Setting > System Setting > General > Startup** to setup the auto-startup functions.

2. The secondary monitor will still retain and display all the functions (for example Event Report, E-map, Resource Report or IO controls) that are opened in the Main console, even if you exit the Main Console.

**Monitor:**

Click on the **Start Monitor** icon and select from the menu to start/stop recording schedule system or the guard system features. You can also open monitor tools such as event report, E-Map, I/O control panel, and system lock.

**Playback:**

Click on the icon to open the Playback Console. You can watch recorded video, search recorded video, adjust the image of the stored data, save video/pictures, print images, check log information and event records, and set up recording function configuration. See the **PlayBack** section for details.

**Schedule:**

Organize the recording time schedule and configure recorder settings. See the **Schedule** section for details.

**Smart Guard System:**

Add/edit type(s) of events that you want to detect and setup action(s) responding to events. See the **Smart Guard System** section for details.

**General Setting:**

Select to modify general settings, user account settings, save/ load configuration settings, access log viewer and backup files, and configure network services. See the **Config** section for details.

## System Information Window

Displays the Current Date, Current Time, Free Disk Space, Network Camera Bitrate, and User Defined Text.

## PTZ Features

### PTZ Camera Control

Use this function to control the movement of PTZ (pan/tilt/zoom) cameras. With cameras that support PTZ control, you can move, zoom, patrol, adjust the focus, and set preset points of the cameras.

### Zoom

Click on the + sign to zoom in or click the – sign to zoom out.

### Preset/Go

Allows you to adjust the camera view until you are satisfied. For example, click **Set** and set the preset point to 01. Adjust the camera view again and set the preset point to 02. Repeat the process until all preset points are set. You can assign a custom name to each preset. Click **Go** to view the results of your setting.

**Note:** To adjust the speed settings of PTZ camera, go to **General Setting > Setting > PTZ Config**.

### Patrol

Go to **Add Preset Point > Set Patrol** to bring up the Patrol Setup dialog. From the left window, select the camera(s) that you would like to have in the patrol group. Align the cameras in order in the right window and adjust the time. Rename the group name if you want. After completing the setup, check the Active option, and then click **OK**.

You can set up to four groups of auto patrol. To start or stop, click on the **Go to Preset Point** icon in the Main Console, and select **Start Patrol** or **Stop Patrol**.

### Auto Pan

Go to **Go to Preset Point** and click on **Start AutoPan** to enable auto pan. Click on **Stop AutoPan** to stop. Auto Pan enables the camera to scan an area horizontally from left to right or right to left.

### Focus

You can select to focus the camera near, far, or have it auto focus. Click on the  sign to focus near, click on the  sign to focus far, and click on the center icon to auto focus. To focus near means objects that are closer will be clearer than the objects that are further away. In contrast, to focus far means objects that are further will be clearer than the objects that are closer. Click on the  icon and select auto focus if you want the system to decide the focus point for you.

### On Screen Menu

Right-click on the camera screen and get the “On Screen” menu, from which you can quickly adjust the settings of your camera.

### Camera Setting

Click to go to the camera setting page for General Setting

### Enable Talk

With cameras that support two-way audio, select **Enable Talk** to utilize the function.

### Enable Digital PTZ

To enable the PTZ functions of the camera, select the **Enable Digital PTZ** option. Use the mouse wheel or click on the + and – signs to zoom in and zoom out on the camera. The square flashing on the video grid indicates the correspondent view of the camera.

### Connect/ Disconnect

Right-click on the display screen and select Connect/Disconnect to modify the connecting status of the camera.

### Show Camera

Select the camera from the Show Camera menu to display video on selected screen. The list of cameras will be displayed in the right column of the monitor display panel.

### Delete Camera

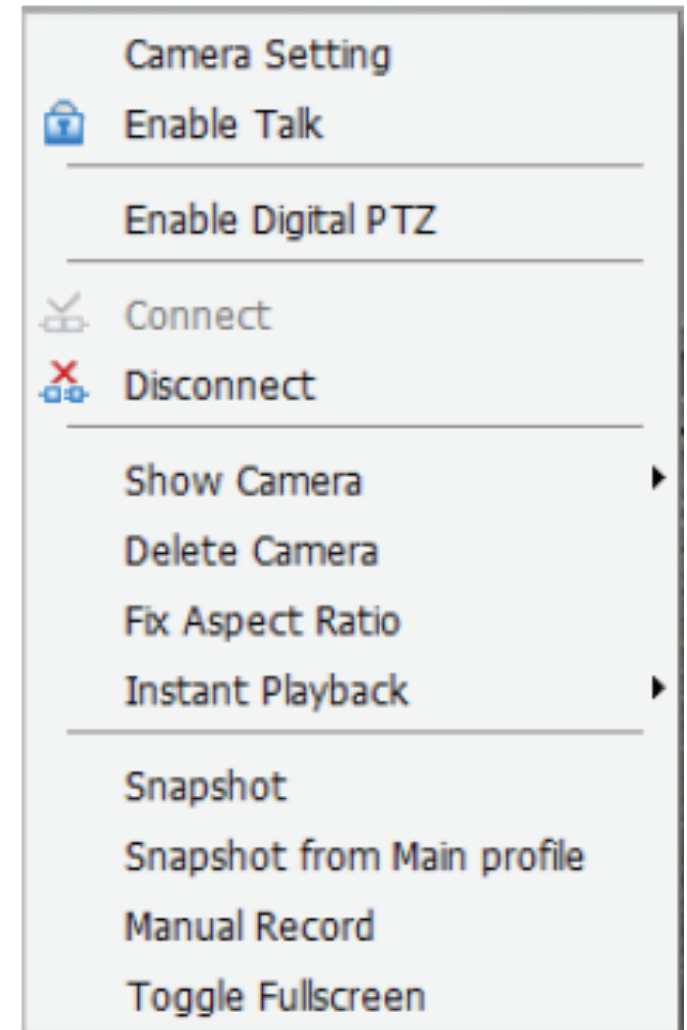

Click on **Delete Camera** to remove a camera from the display screen.

### Fix Aspect Ratio

Enable **Fix Aspect Ratio** to view the original ratio video or disable this option to stretch 3:4 to fit window.

### Instant Playback

Instant Playback function allows you to play the last few minutes of any live video channel. Simply right Click Live Channel and select Instant Playback to access the recorded video.

### Snapshot

Select the snapshot function to capture a screen shot of the current video. You have the option to copy the image to clipboard or to save it. You may select the OSD option to export the image with date/time and camera number/name text. If the digital PTZ function is enabled, you can decide either Full size or Selected region as your snapshot region.

### Snapshot from Main profile

Select the snapshot function to capture a specific video image frame from camera main profile immediately. You have the options to copy the image to clipboard or to save it

### Stream Profile

Select different level Stream Profiles to downgrade video quality for bandwidth concerns.

### Manual Record

Select to start recording video.

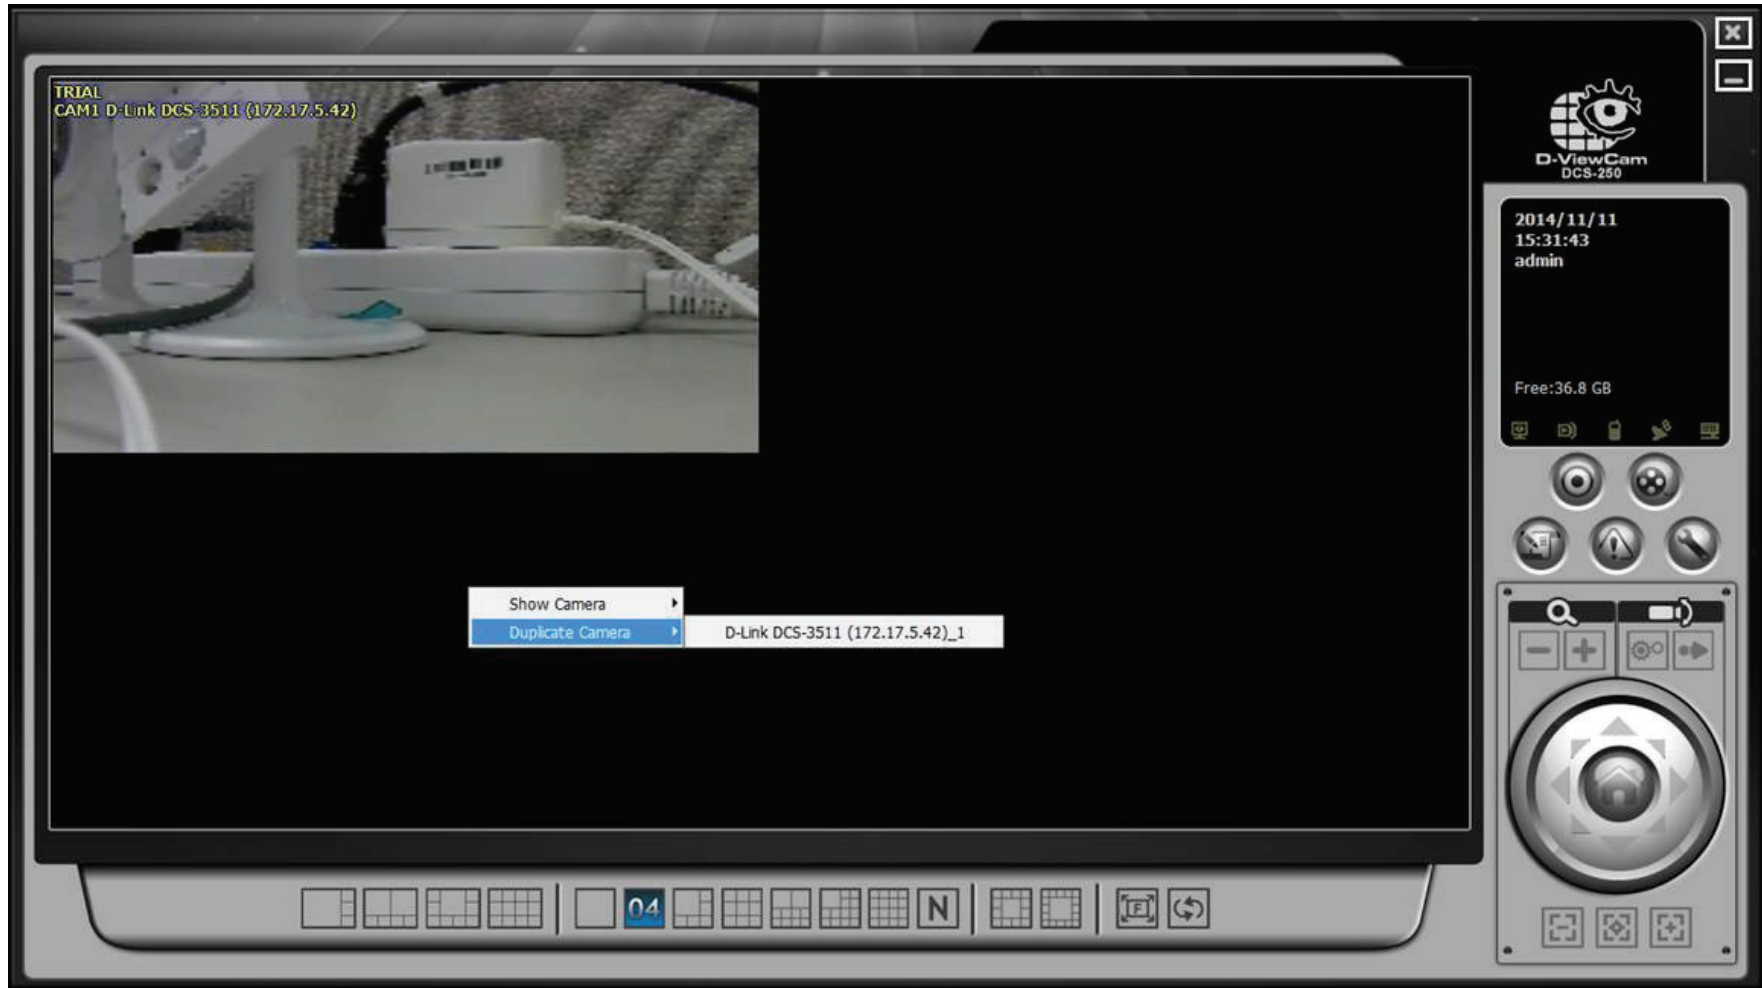

### Toggle Fullscreen

Select to view live video(s) in fullscreen. Press **ESC** to go back to the original window.

### Duplicate Camera

To duplicate the feed from a camera, right-click on a blank area of the screen and select **Duplicate Camera**. Select the appropriate camera to duplicate the feed from. The duplicate view from the camera will then be displayed adjacent to the original view.

**Live Display**

Live display allows you to change channels and screen divisions on the Main Console and secondary monitor. Each screen division will have the same display list, but different sequence. The maximum number of screen divisions supported by the Main Console and secondary monitor is 64. For example, when using **Show/Delete Camera** to edit the camera list, the administrator can apply this function to all different screen divisions. Refer to the **On Screen Menu** section for more information on Show/Delete Camera.

**Note:** The camera list of all divisions is the same as the right column of monitor display on **General Setting > Setting** window. This means, two monitors could have two different lists.

Action	Current Division	Other Division
Show camera (add cam 1)		Add to first free channel
Duplicate camera (duplicate cam 2)		Add to first free channel
Delete camera (delete cam 2'')		Remove cam 2 and keep channel free

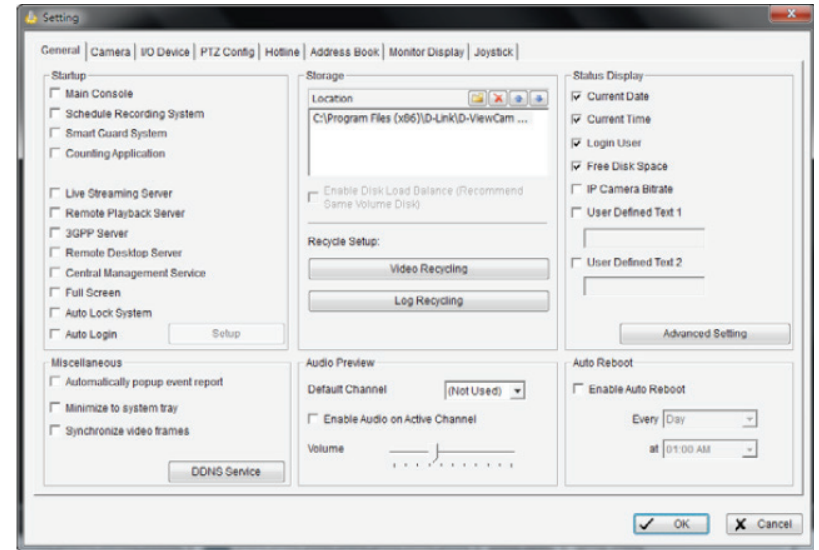

When using mouse to drag camera channel, the sequence change would only apply to original division.

Original	Action	Current Division	Other Division
	Drag cam 1 to cam 4		No change in sequence

Right click on the camera screen and get the On Screen Menu, from which you can quickly adjust the setting of camera.

# Configuration

Click  to configure your settings.

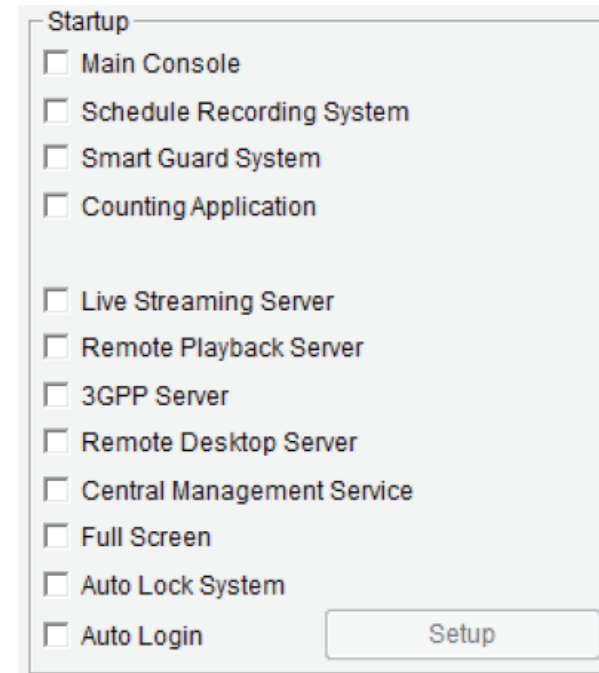

## General

Go to **General Setting > Setting > System Setting > General**.

### Startup

**Main Console:** Select to view the Main Console system at startup.

Select the functions and network services that should activate automatically.

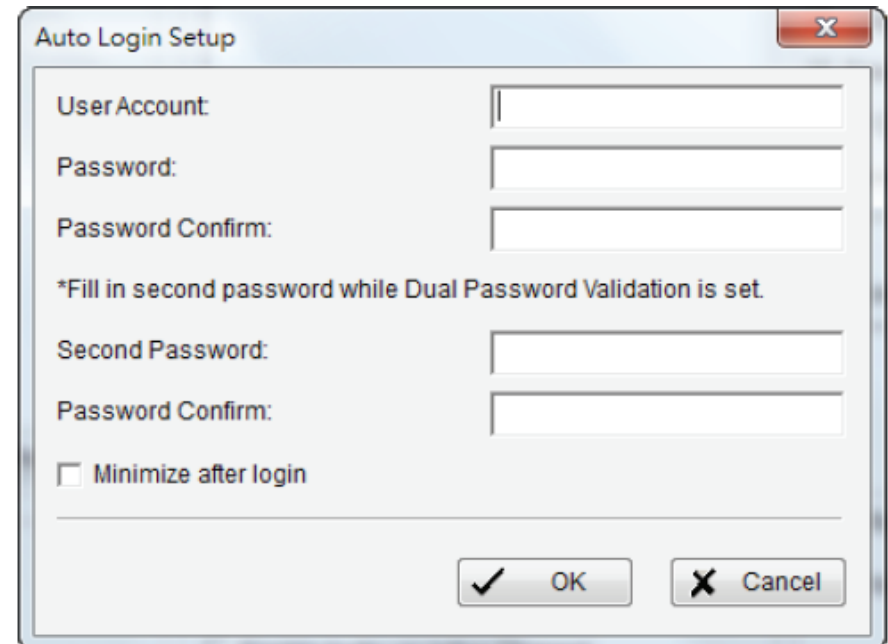

The screenshot shows a window titled "Startup" with a list of checkboxes for various services. The services listed are: Main Console, Schedule Recording System, Smart Guard System, Counting Application, Live Streaming Server, Remote Playback Server, 3GPP Server, Remote Desktop Server, Central Management Service, Full Screen, Auto Lock System, and Auto Login. A "Setup" button is located at the bottom right of the window.

### Auto Login Setup

**Auto Login:** Select **Auto Login** and then click **Setup** to view the **Auto Login Setup** window.

Enter the **User Account** and **Password** to login automatically when the system starts. Enable **Minimize after login** to minimize the Main Console window after login.

The screenshot shows a window titled "Auto Login Setup" with a close button (X) in the top right corner. The window contains the following fields and options:

- User Account: [Text Input Field]
- Password: [Text Input Field]
- Password Confirm: [Text Input Field]
- \*Fill in second password while Dual Password Validation is set.
- Second Password: [Text Input Field]
- Password Confirm: [Text Input Field]
- Minimize after login

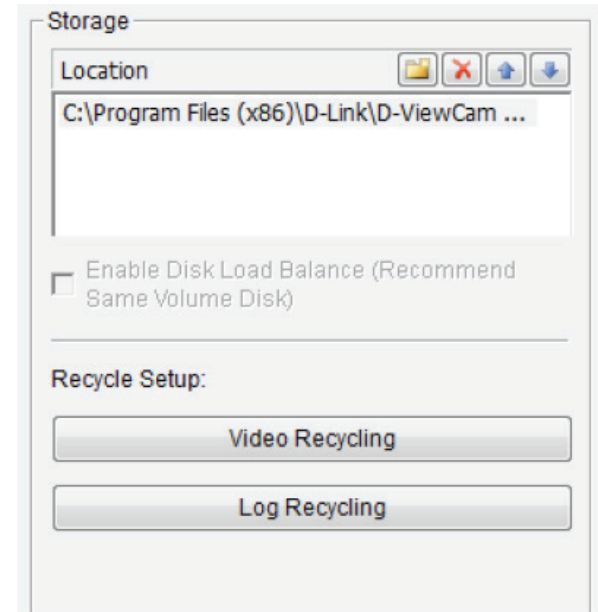

At the bottom right, there are two buttons: "OK" (with a checkmark icon) and "Cancel" (with an X icon).

## Storage

### Location:

Assign the default folder for the system to store data files. It is recommend that you don't save in the system drive (C:\) to avoid a drop in your PC's performance when free storage is low.

	<b>New</b>	Click to add a new location. Click the ... button to browse to a folder. Click <b>OK</b> to save the location.
	<b>Delete</b>	Highlight a location and then click the <b>Delete</b> button to remove it.
	<b>Move Item Up</b>	Highlight a location and click the <b>Move Item Up</b> button to move the location higher in the list.
	<b>Move Item Down</b>	Highlight a location and click the <b>Move Item Down</b> button to move the location lower in the list.

### Video Recycling:

This option allows the user to configure different recycle criteria for different cameras and for different recording modes of the same camera.

**General setting:** Set the standard limit to let the system recycle automatically. The system will start to recycle if the disk space is less than the indicated percentage (default is 10%, minimum is 5%).

**Option setting:** Set different recycle days for Record 1 / Record 2 in order to keep different lengths of recordings.

**Allow exception:** Drag and drop the camera(s) to the right panel and it will pop up a window allowing the input of special recycle criteria. In the example below, the 2 recordings of the first camera were configured with different recycle criteria: Record 1: 7 days; Record 2: 30 days.

If you expect a recording will utilize all available space, you can leave the keep x days option blank. By setting this, the symbol will become "--", and the length of Record 2 will depend on the remaining available space. This also means this recoding has the lowest priority, so it would be recycled first when disk space is insufficient in order to meet recording settings.

**Note:**

1. The system will detect the storage space of default location, if the default storage space is exhausted, the video will be stored on the next available directory.
2. If all the locations exceed the storage rule, the system will start recycling.
3. Recycle priority: keep % of disk space > keep x days > keep - days.
4. Recycle example:

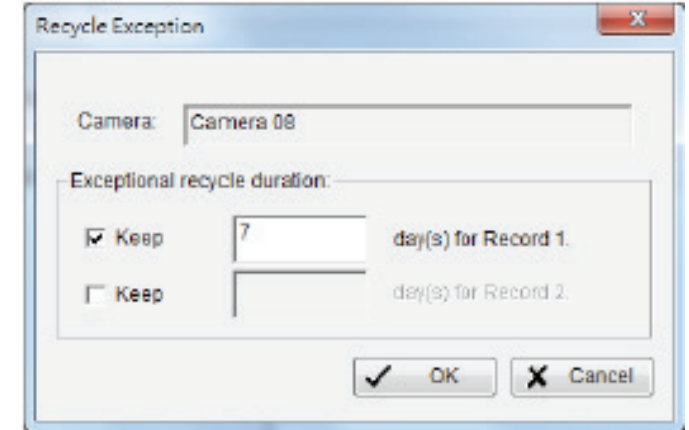

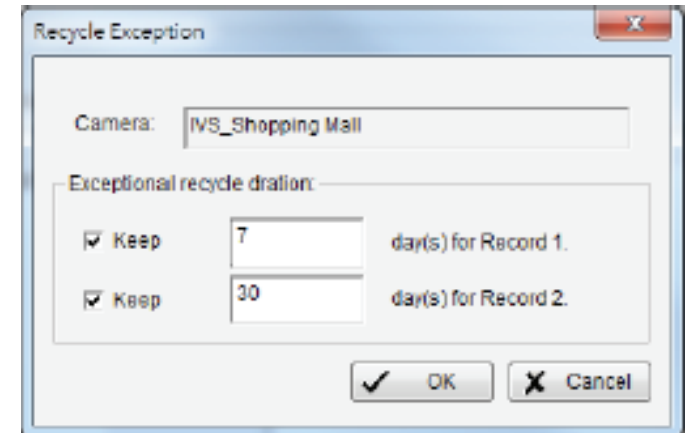

**Example 1:** Set "keep 10% of disk space"; Current available space is still more than 10%, ex: 15%.

- A. For the recordings set as "keep x days": Main Console will start to delete the oldest recording when it's data length reach X days.
- B. For the recordings set as "keep - days": Main Console will continue recording and will start deleting the oldest recording when available disk space reaches 10%.

**Example 2:** Set "keep 10% of disk space"; Current available space is 10%.

- A. For the recordings set as "keep - days": Main Console will start to delete the oldest recording. The new space after deletion will be used to store the recording which is set as "Keep X days".
- B. For the recordings set as "keep X days": Main Console will start to delete the oldest recording when it's data length reaches X days.
- C. Main Console continues to delete the oldest recordings of "keep - days" until there remains only 1 day. Then, Main Console will start to delete the oldest recordings from "keep x days" in order to follow the rule of keeping 10% of disk space.

**Log Recycling:** Click the button to obtain the **Advanced Recycle Setting** panel. Set the days that you want to keep the event or keep all event logs within interval of video files.

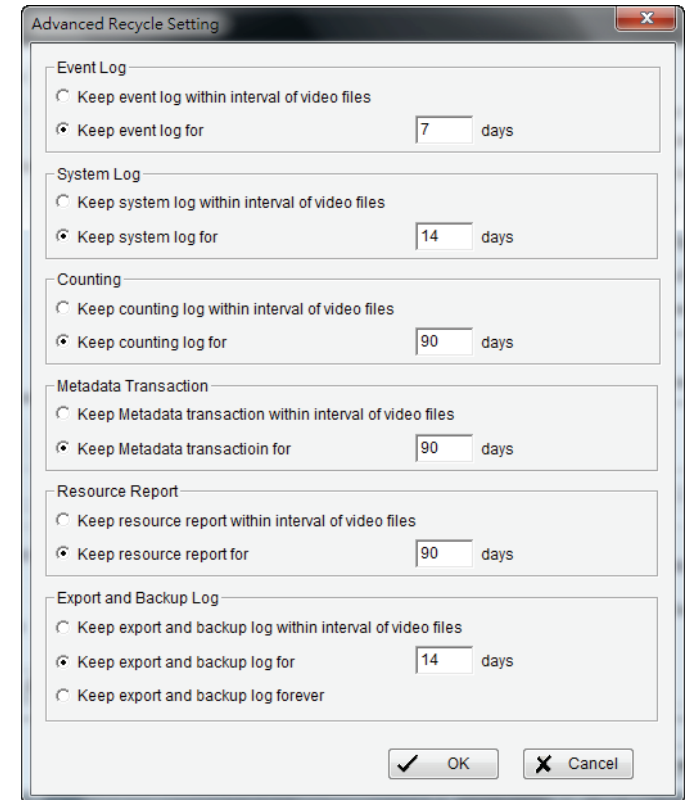

**Event Log:** Delete the event log data that is older than the number of days set.

**System Log:** Delete the system log data that is older than the number of days set.

**Counting:** Delete the counting application data that is older than the number of days set.

**Metadata Transaction:** Delete the metadata transaction data that is older than the number of days set.

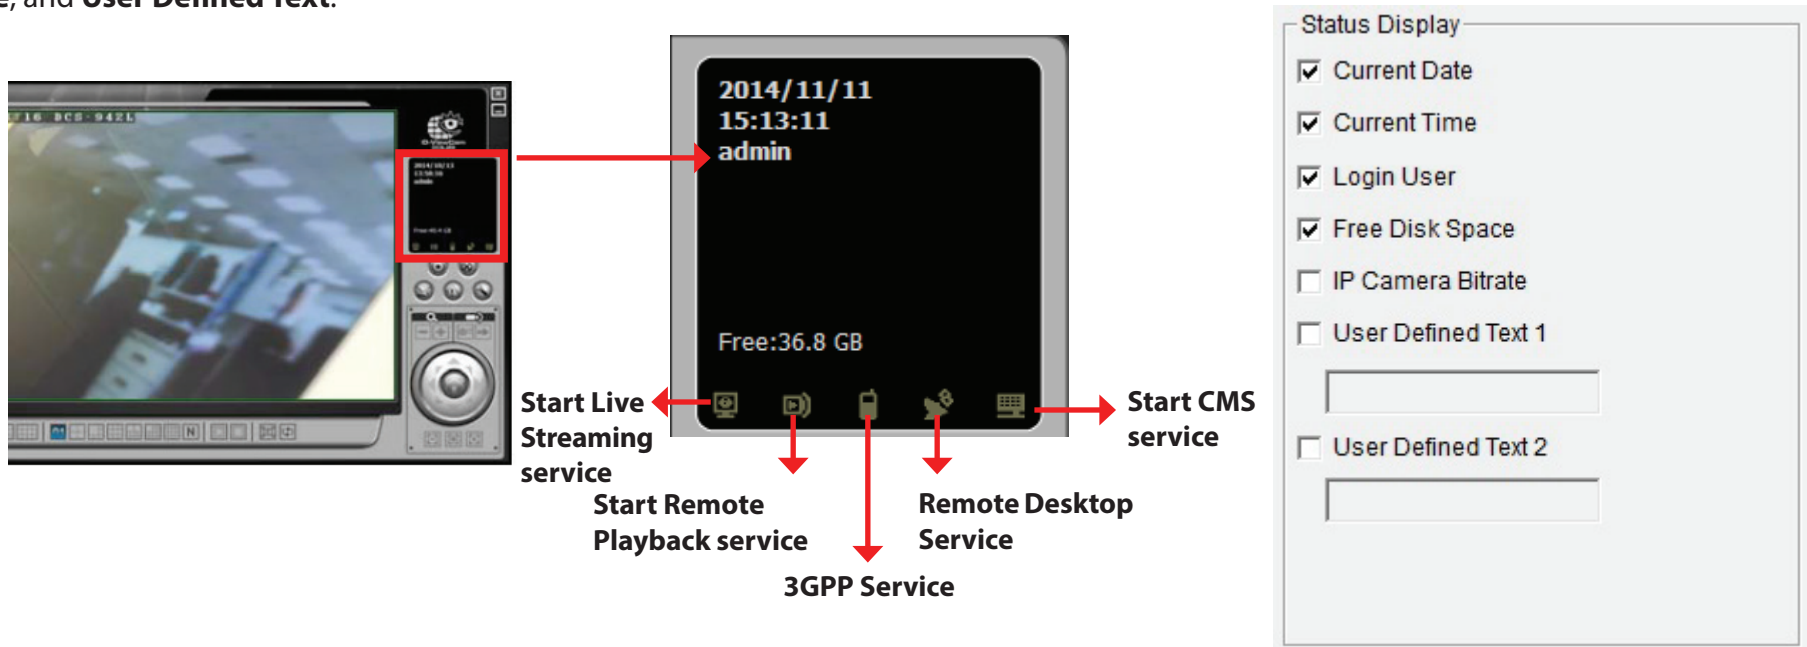

**Resource Report:** Delete the Resource report data that is older than the number of days set.

## Status Display

Select the information that you wish to display on the Main Console such as **Current Date**, **Current Time**, **Free Disk Space**, **Network Camera Bitrate**, and **User Defined Text**.

## Miscellaneous

**Automatically Popup Event Report:** The **Event Report** will automatically popup when events have been detected. Make sure to stop the **Smart Guard** system before you modify this setting, otherwise the modification will not take place.

**Minimize to system tray:** Enable this  button to minimize the application to an icon in the task bar.

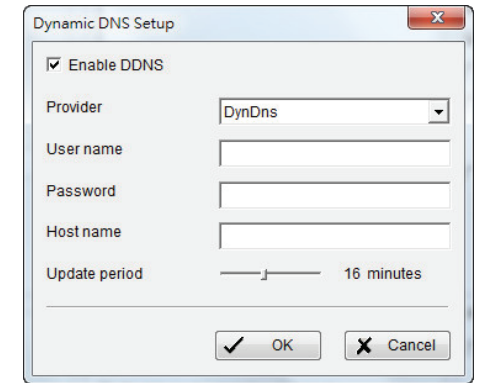

**Note:** Enter the username and password of the Main Console when you click the minimized icon in the task bar to start monitoring.

**Synchronize video frames:** Select to prevent tearing that may occur in the video display. However, this will increase the CPU processing load.

**DDNS Service:** Dynamic Domain Name Server (DDNS) allows you to use **Live View** or **Web View** to connect to the Main Console using the Internet even if you have a dynamic IP address.

Click **DDNS Service** to open the **Dynamic DNS Setup** window.

Update the following fields - **Provider**, **User name**, **Password** and **Host name**, and **Update period**.

## Audio Preview

**Default Channel:** Select the audio channel that you wish to hear from.

**Enable Audio on Active Channel:** Select the **Enable Audio on Active Channel** to hear the audio from the selected video channel on each video grid of the Main Console. The default channel plays if the video channel isn't selected.

**Volume:** Use the volume bar to adjust volume.

System plays audio of the default channel

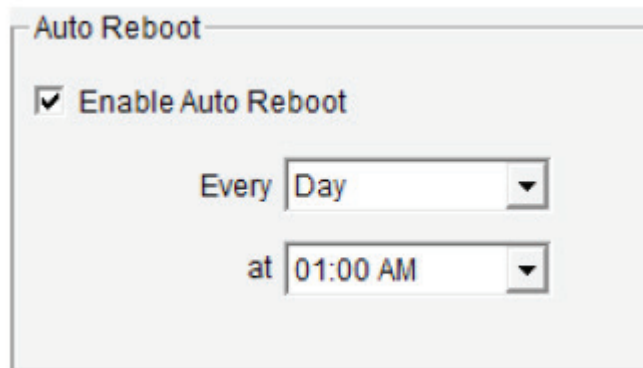

System plays audio of the selected channel

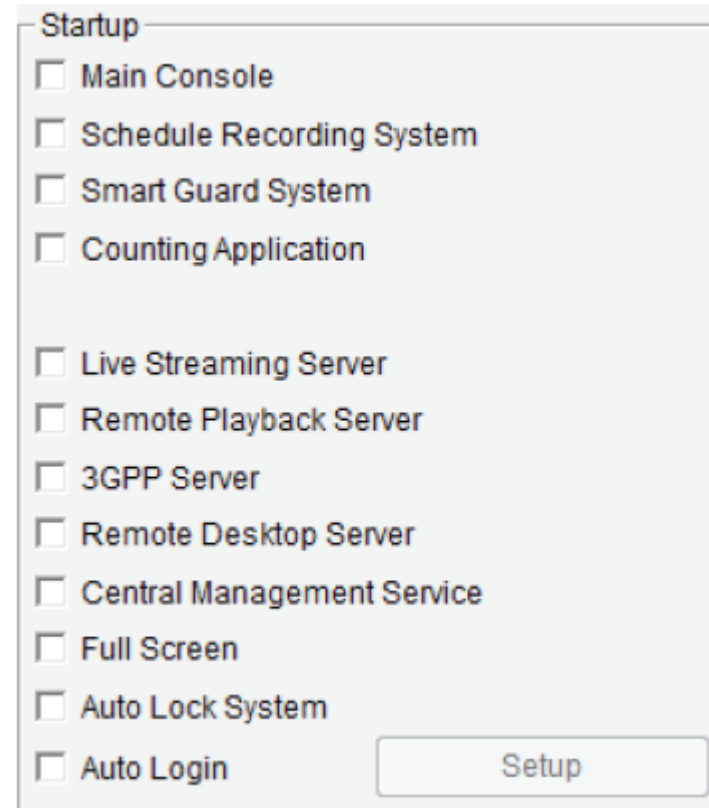

## Auto Reboot

Select **Enable Auto Reboot** and set the day and time to reboot the system.

**Note:** Please enable **Main Console, Auto Login, and other functions in the Startup** section to ensure that the system runs normal after auto reboot.

The screenshot shows the 'Auto Reboot' configuration window. It features a checked checkbox labeled 'Enable Auto Reboot'. Below this, there are two dropdown menus: the first is labeled 'Every' and is set to 'Day', and the second is labeled 'at' and is set to '01:00 AM'.

The screenshot shows the 'Startup' configuration window. It contains a list of ten unchecked checkboxes: 'Main Console', 'Schedule Recording System', 'Smart Guard System', 'Counting Application', 'Live Streaming Server', 'Remote Playback Server', '3GPP Server', 'Remote Desktop Server', 'Central Management Service', 'Full Screen', 'Auto Lock System', and 'Auto Login'. A 'Setup' button is located at the bottom right of the window.

## Camera

Go to **General Setting > Setting > System Setting > Camera**.

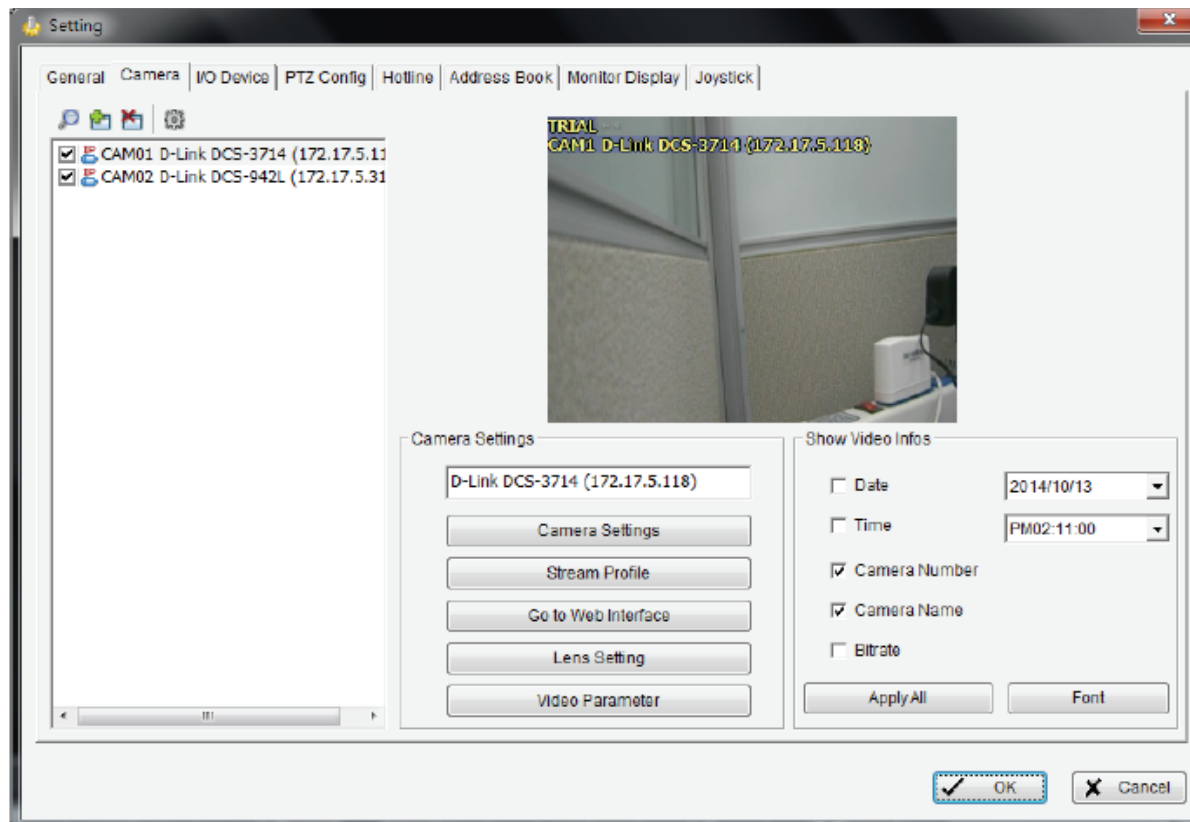

### Add Camera

The **Search, Insert, Delete** and **Config** functions are included in the **Setting** window.

**Search:** Click **Search** to open the **Search Network Camera** window. The system will start scanning automatically once the window is opened. You may manually stop scanning by clicking **Stop Scan**.

Enter the user name and password for each Network Camera found and click **OK** to add it to the camera list.

*Drag the mouse to multi-select the cameras and then insert the username and password. The username and password will be applied to all the selected cameras automatically.*

**Insert:** Click on the  to open **Network Camera / Video Server Setting** and add network cameras to the list.

**Delete:** Click on the  to remove the selected network camera(s) from the system. Click **OK** to finalize the modification.

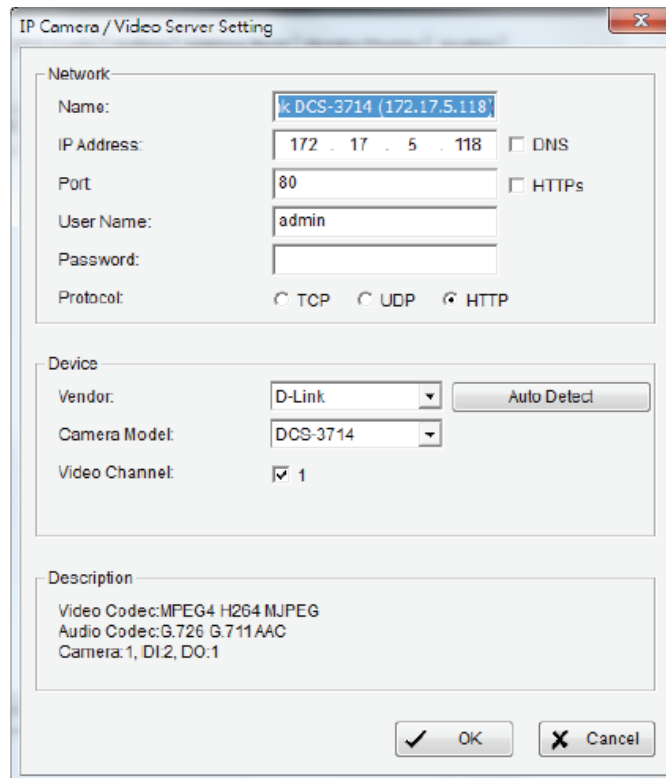

**Config:** Click on the  to open **Network Camera / Video Server Setting**. Here, you can modify the network camera settings.

### Network Camera / Video Server Setting

**Network:** Update the fields, including **Name**, **IP Address**, **Http Port**, **User Name**, **Password** and **Protocol** referring to the instructions provided by the camera manufacturer. Select **Use DNS** to use domain name instead of IP address.

**Device:** Choose the network camera manufacturer from the drop-down menu. Click **Auto Detect** and the model name will be displayed in the list.

**Description:** Displays information about the device.

IP Camera / Video Server Setting

Network:

Name: DCS-3714 (172.17.5.118)

IP Address: 172 . 17 . 5 . 118  DNS

Port: 80  HTTPs

User Name: admin

Password:

Protocol:  TCP  UDP  HTTP

Device:

Vendor: D-Link

Camera Model: DCS-3714

Video Channel:  1

Description:

Video Codec:MPEG4 H264 MJPEG  
Audio Codec:G.726 G.711AAC  
Camera:1, DI:2, DO:1

## Camera Parameter

**Camera List:** Displays all the cameras that are connected to the system. Click the name of the camera to edit the settings.

**Camera Name:** Name the camera for your convenience.

**Camera Settings:** Set the camera parameter such as resolution and frame rate offered by camera vendor. If the camera supports Multi-stream, you can enable the function by checking “**Enable Multi-Stream**”.

**Note:** The multi-stream function allows the main console to receive 3 different video streams. Please check device pack support list for supported features.

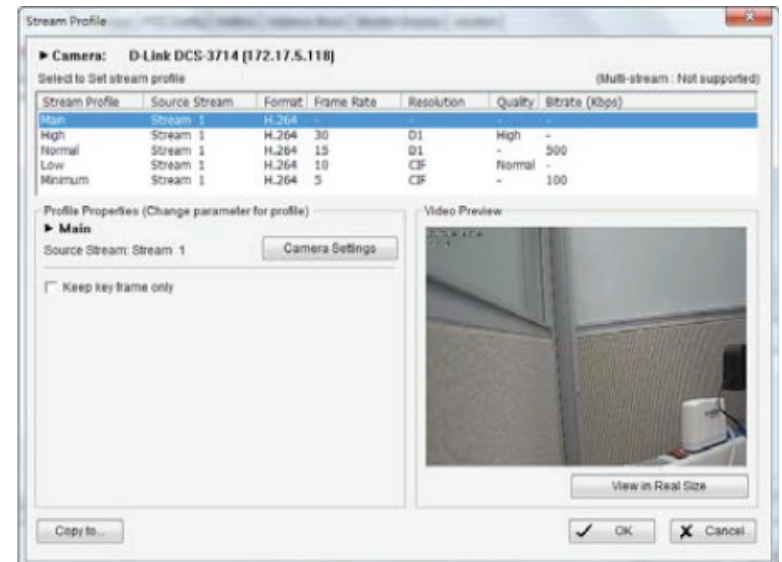

**Note:** Not every camera model supports multi-stream configuration, please refer to the latest camera support list to see if multi-stream is supported.

**Stream Profile:** Stream profiles are pre-defined to preferred settings which will respond from the query of the remote live view function. Each profile has different Format, Frame, Resolution, Quality and Bit rate (Kbps) settings.

For cameras that support the Multi-stream function, the 3 different source streams can be connected to Main console and automatically mapped to different stream profiles. Click a **stream profile** to select the source stream you would like to change.

**Go to Web Interface:** Go to the web-based interface of your camera to configure the settings (optional).

**Video Parameter:** Adjust the video’s brightness, contrast, saturation, and color hue values.

## Camera Settings

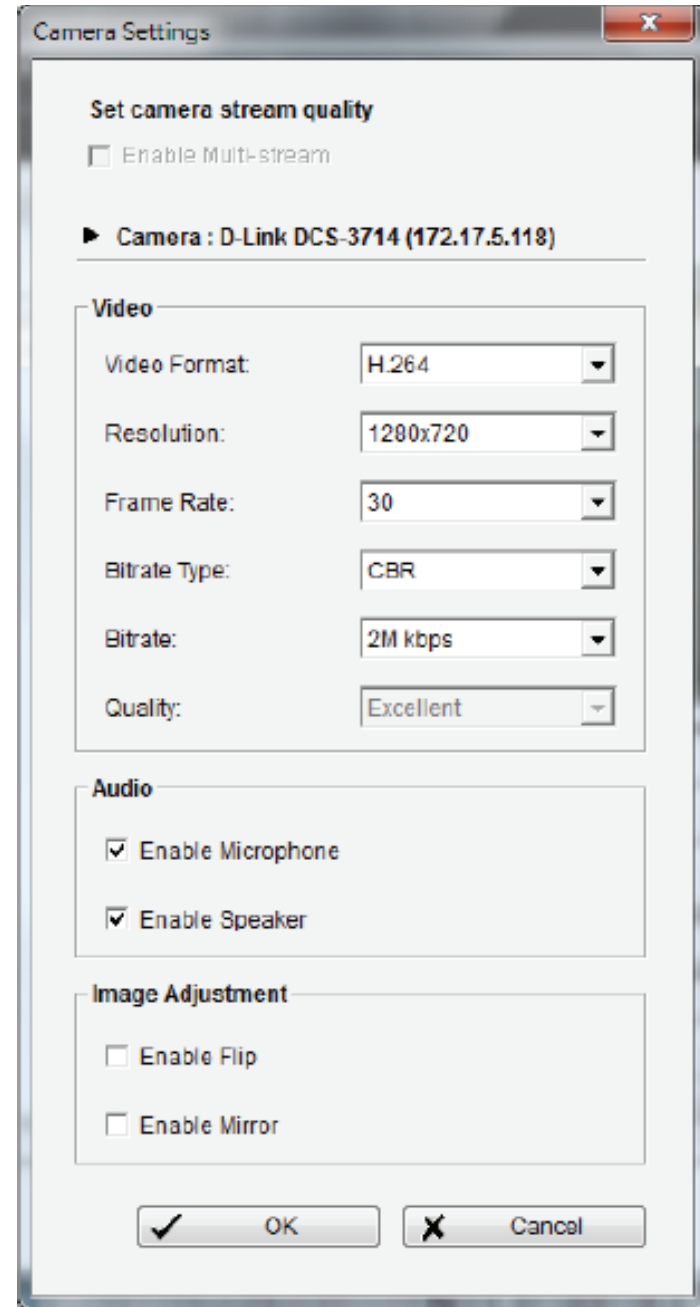

**Video Format:** Select the video format for the footage.

**Frame Rate:** Select the frame per second.

**Resolution:** Select the resolution.

**Bitrate Type:** Select the bitrate mode.

**Bitrate:** Select the bitrate amount.

**Image Adjustment:** Enable image to be flipped or mirrored.

**Audio:** Enable microphone or speaker if your camera has these features.

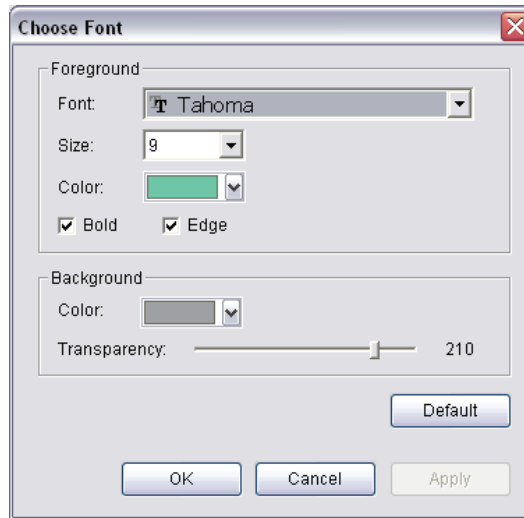

**Fish eye Setting (for fish eye cameras only)**

**Mount Type:** Select whether the camera is being mounted on a wall, ceiling, or on a desktop.

**Display Mode:** Select the display mode from 1O (fisheye mode shows the full camera view), 1R (normal mode shows a view similar to a standard camera), 2P (panoramic mode shows a full 180-degree mode across 2 panels), 1O 3R (multi-view with Fisheye mode shows a multiple window view with fisheye in the top-left panel), and 4R (multi-view).

## OSD (On-Screen Display) Settings

Select the information that you wish to see on the on-screen display. Click **Font** to select the font style.

## I/O Device

Go to **General Setting > Setting > System Setting > I/O Device**.

### I/O Device Setting:

- **Module:** Name of the module and ID of the digital input/output device(s) that is connected to your system.
- **Device:** This column displays the device(s) already installed to the system.
- **ID:** Select the I/O port.

**Digital Input Monitor:** The device(s) is turned on if the dot is in red. By triggering the digital input device, the related icon will light up. This is used to check if the device is correctly connected or not.

**Digital Output Monitor:** The device(s) is turned on if the dot is in red. By clicking on the icon, you may trigger the digital device connecting to the system. This can be used to test if the output device is correctly connected.

### Device Setting

**Name:** Insert the name of the device (input and output).

**Type:** Select the device type from the drop-down menu.

1. N/O: Normal Open
2. N/C: Normal Close

## PTZ Config

Go to **General Setting > Setting > System Setting > PTZ Config**.

Select a PTZ camera from the list to activate the PTZ control function.

### Advanced Setting

Adjust the pan speed, tilt speed, and zoom speed settings by dragging the bars.

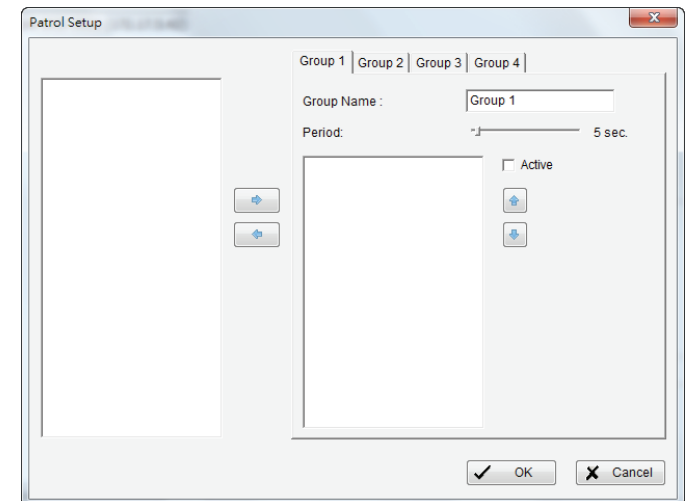

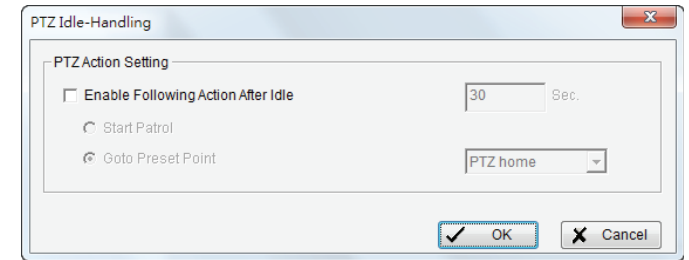

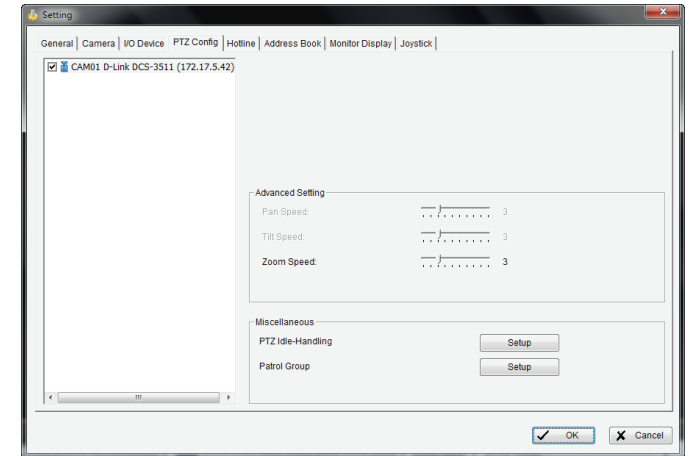

### Miscellaneous

**PTZ Idle-Handling:** By enabling this function, the PTZ camera will automatically go back to a default preset point when no PTZ commands are under action during a period or start patrol.

**Patrol Group:** Click to setup a patrol group.

From the left window, select the camera(s) that you would like to have in the patrol group. In the right window, align the cameras in order and adjust the time. Rename the group name if you want. After completing the setup, select **Active** to trigger functions such as **Auto-tracking** and **Login** of the camera, and then click **OK**.

You can set up to four groups of auto patrol. To start or stop, click **Patrol** in the Main Console, and select **Start Patrol** or **Stop Patrol**.

## Hotline

Go to **General Setting > Setting > System Setting > Hotline.**

Use this window to configure the Hotline settings when an unusual event is detected.

**E-Mail:** Enter the following information - SMTP server, port, sender's e-mail address, subject title, body content and SSL for encrypted transmission. Click **Send Test Mail** to test the settings.

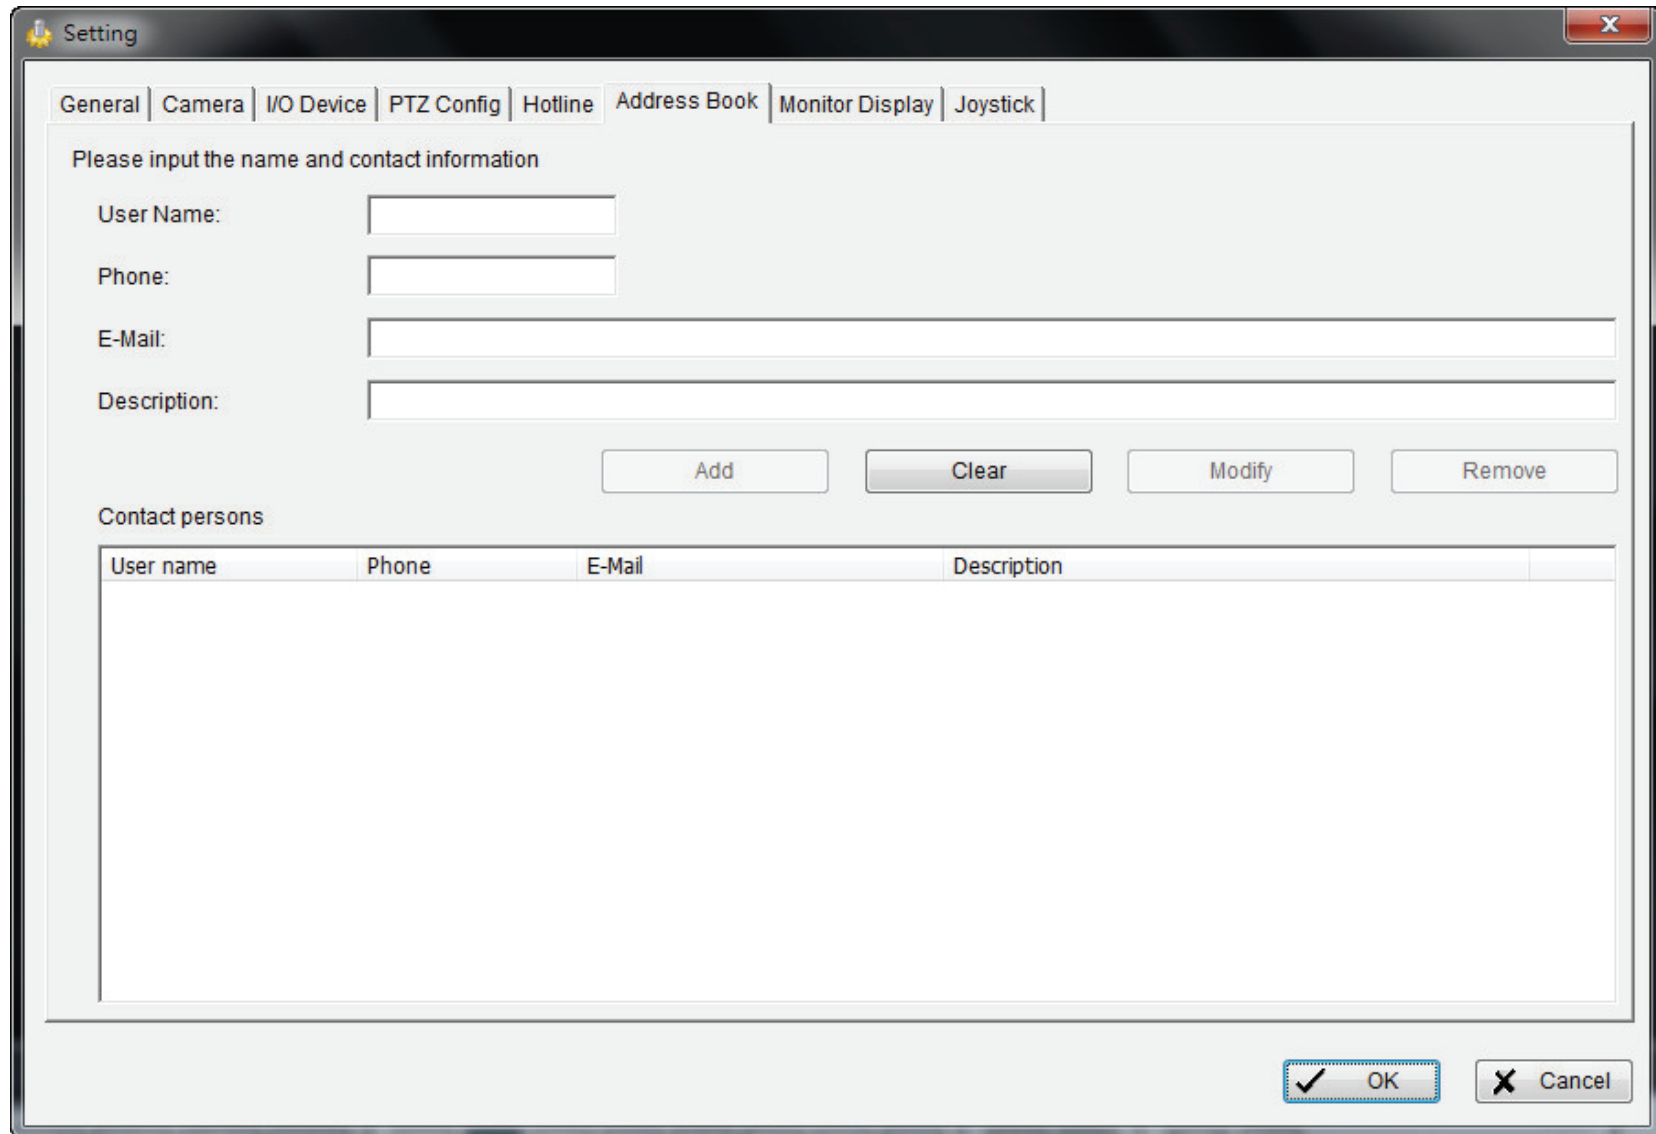

**GSM modem:** Set the **Port** and **Baud Rate** of the GSM modem device, and then enter **PIN** code. You can also enter the time for sending a SMS message. Click **Test** to send a test SMS message.

**Note:** The **Interval** is set to restrict the time period while sending two SMS messages. For example, if you set as 60 min, the SMS sent between 60 min will be deleted and not sent to the user.

## Address Book

Go to **General Setting > Setting > System Setting > Address Book**.

Use this window to update name, phone number and e-mail address information. When an unusual event is recorded, an e-mail notification will be sent out by the system.

The screenshot shows a web-based configuration window titled "Setting" with a close button (X) in the top right corner. The window contains several tabs: "General", "Camera", "I/O Device", "PTZ Config", "Hotline", "Address Book", "Monitor Display", and "Joystick". The "Address Book" tab is selected.

Below the tabs, there is a section titled "Please input the name and contact information" with the following fields:

- User Name:
- Phone:
- E-Mail:
- Description:

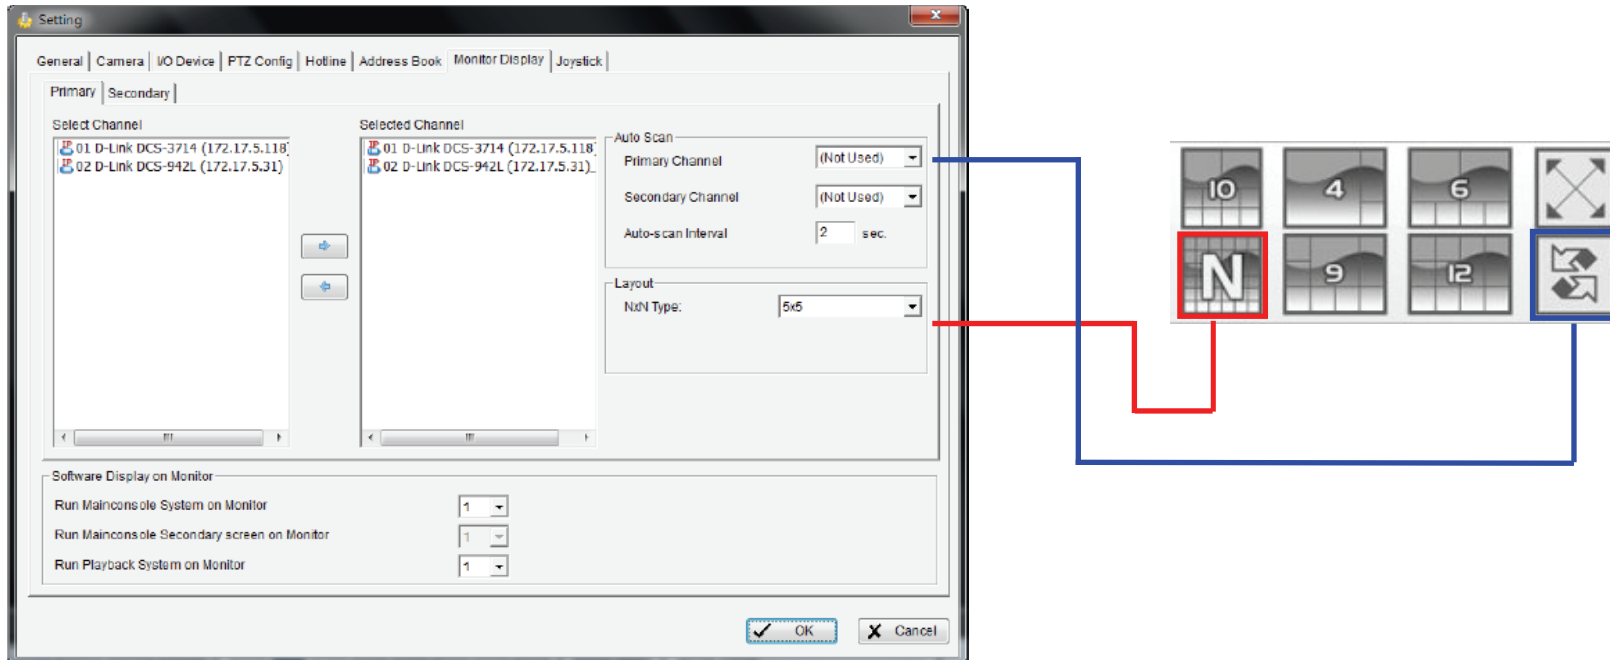

Below these fields are four buttons: "Add", "Clear", "Modify", and "Remove".

Below the buttons is a section titled "Contact persons" containing a table with the following columns: "User name", "Phone", "E-Mail", and "Description". The table is currently empty.

At the bottom right of the window are two buttons: "OK" (with a checkmark icon) and "Cancel" (with an X icon).

## Monitor Display

Go to **General Setting > Setting > System Setting > Monitor Display**.

**Playback Option:** Execute Playback feature on the secondary monitor by selecting the **Secondary** tab. Make sure to adjust your computer display settings (supports 800x600, 1024x768, 1200x900, 1280x1024 and 1600x1200 monitor resolutions) in advance to avoid system error.

**Cameras List:** The left column displays a list of all available cameras. Highlight the camera and click --> to move the camera to the right column. The right column will display the primary and secondary cameras. These cameras will be available for the auto-scan function.

**Auto Scan:** Activate auto scan to rotate the channels/cameras on the display screen.

For example, you may select to show only 4 sub-screens on the Main Console while having 16 channels connected to the system. With auto scan function, you will be able to see all the 16 channels. You can set up a primary channel that will always be on the screen and a secondary channel that has secondary priority.

**Layout:** Choose the number of divisions for NxN division on the Main console screen.

## Joystick Setting

You can choose any function from the drop-down menu to assign to the button on the joystick

**Note:** Following is a complete list of all functions:

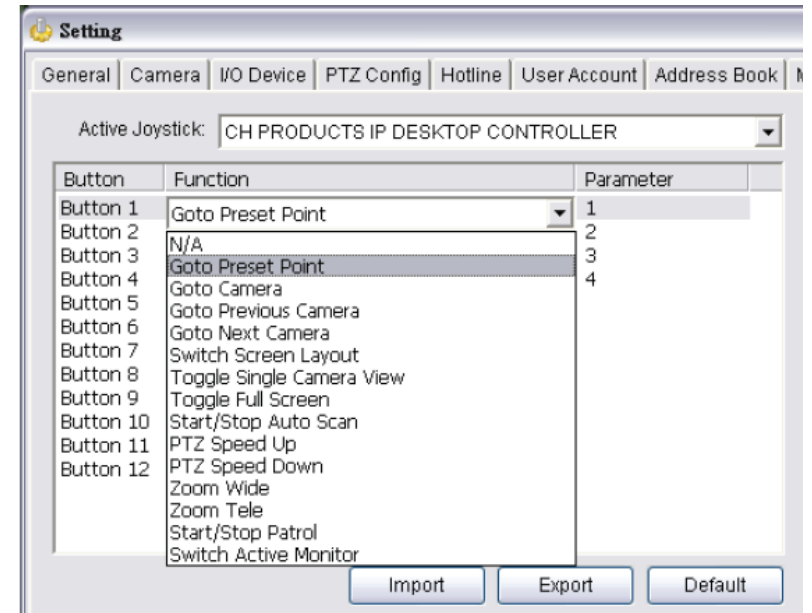

- |                                       |                           |
|---------------------------------------|---------------------------|
| 1. N/A                                | 9. Start/Stop Auto Scan   |
| 2. Goto Preset Point (including Home) | 10. PTZ Speed Up          |
| 3. Goto Camera                        | 11. PTZ Speed Down        |
| 4. Goto Previous Camera               | 12. Zoom Wide             |
| 5. Goto Next Camera                   | 13. Zoom Tele             |
| 6. Switch Screen Layout               | 14. Start/Stop Patrol     |
| 7. Toggle Single Camera View          | 15. Switch Active Monitor |
| 8. Toggle Full Screen                 |                           |

**Parameter:** You can choose the parameter of the function from the drop-down menu.

**Default:** You can set the default setting for the joystick.

**Export:** You can export the setting of the joystick.

**Import:** You can import the setting of the joystick.

## User Account Setting

Go to **General Setting** > **Setting** > **User Account**.

Only an administrator can manage user accounts. From the Privilege list, highlight each account to modify.

**Note:** The system by default, will display the account group's default privilege profiles. Enter a **Name** and **Password** to create a new account, or click an existed account to modify his/ her privilege.

### Basic Users

Click  to add a new Basic User. Click  to delete an existing Basic User.

Create and modify the content of each user account under User Account Setting:

**User name:** Insert the user name.

**Group:** Assign the group for each user.

There are 3 default privilege profiles of account groups:

**Admin:** Have privileges of all system functions and devices, except adding/deleting/modifying privileges of other users.

**Power User:** Have limited privileges of system functions and complete privileges of assigned devices.

**User:** All the privileges of system functions are forbidden. Users can only manage assigned devices.

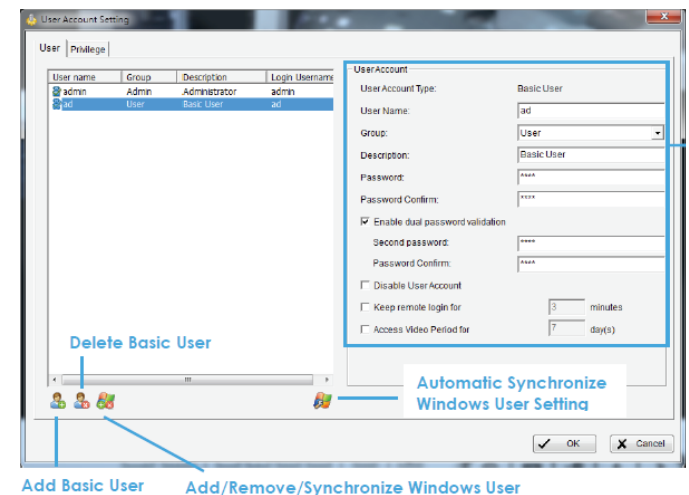

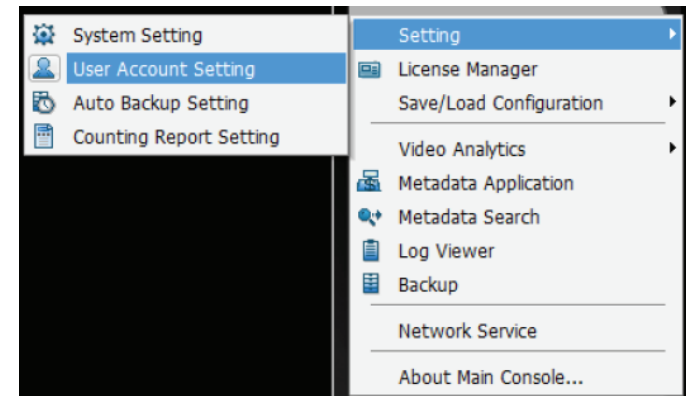

**Description:** Insert the description related to each user.

**Login Username:** the user account display name when login.

**Password:** Insert the password assigned to each user.

**Password confirm:** Insert again to confirm the password.

**Enable dual password validation:** Insert the second password assigned to each user. If this function enabled, the second password will be required for certain operation depends on the setting of "Privilege" page.

**Disable User Account:** By checking this option, the account's access to the system will be blocked. Disabled accounts will be marked with a cross on the

**Note:** Only the default admin account cannot be disabled.

**Keep remote login for \_\_\_ minutes:** Insert the duration to auto kick out account after logging in from Remote Live Viewer or Remote Playback server.

**Access Video Period for \_\_\_ day(s):** Insert the duration for the account to access video period.

### Windows Users

Click  to add/remove/synchronize Windows Users.

#### Select User

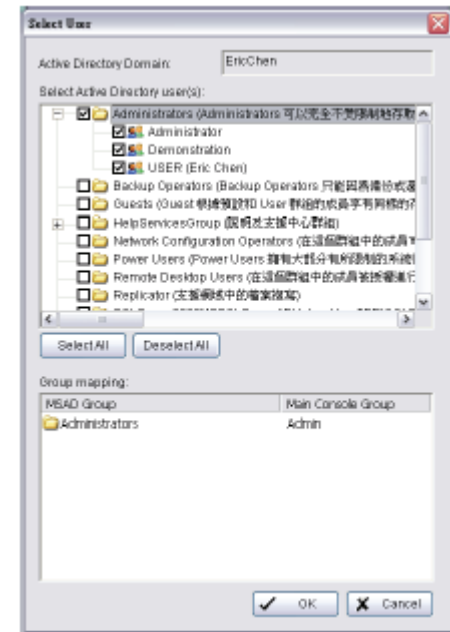

Check users or folders under **Select Active Directory user(s)** and click **OK** to add Windows Users.

Click Select All to check all available users and folders, or click Deselect All to uncheck all users.

#### Group Mapping:

Selected Windows users will be grouped according to default mapping:  
You may modify group setting for each user later under the User Account page.

Click **OK** when you are done adding Windows users.  
Synchronization results will be displayed for confirmation.

MSAD Group	Mainconsole Group
Administrator	Admin
Guest	User
Other	PowerUser

**Please refer to the default solution for all conflicts:**

**New accounts added from AD domain:**

Add to Mainconsole

**Accounts from AD domain removed:**

Delete from Mainconsole

**Account description modified:**

Update description

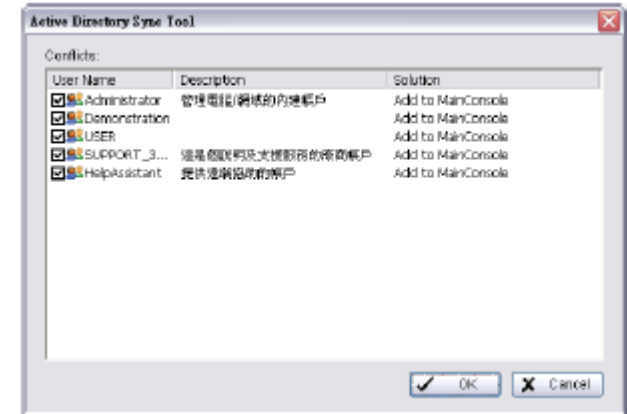

**Encountered admin account:**

Skip admin account

**Newly added account from AD domain conflicts with existing basic user account:**

Replace basic user account

Uncheck items to skip applying solution to Mainconsole user account settings. For example, if you uncheck an “Add to Mainconsole” solution, the new account will not be added to Mainconsole’s user account list.

## Automatic Synchronize Windows User Setting

Instead of manually adding and updating Windows users, you may also config the system to automatically synchronize all Windows users at a specific period.

Click  to do this.

### Automatically synchronize Windows users:

Check to enable automatic synchronization.

### Synchronized period:

Config the synchronization to start every \_\_\_ days.

### Synchronized time:

Define at what time the synchronization should start.

**Note:** Auto synchronization will apply all default solutions to conflicts.

**Privilege:** Define detailed privilege of functions and devices for each user account.

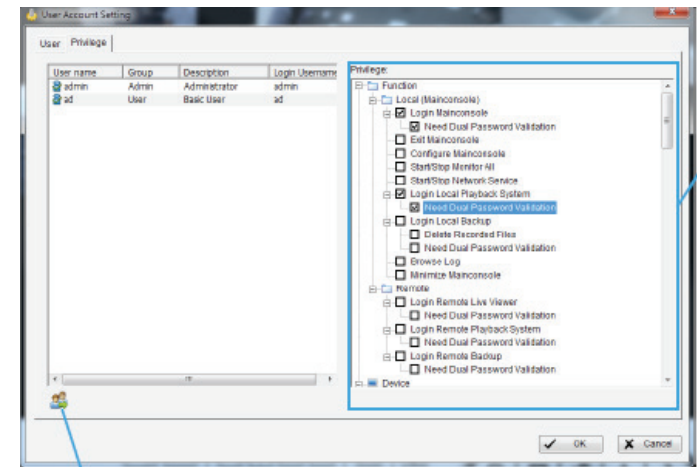

**Function:** General Setting settings, operation related, system General Setting, and privilege of remote access.\*

**Device:** General Setting device privileges of camera, digital output and metadata sources in Mainconsole and client applications.

**Copy Privilege to...:** Click this button to copy privilege settings of any account to another.

**Note:** The privilege of default admin account cannot be configured.

“Setup TV-Out function” is not available if there is no SCB-7108/7116 card installed.

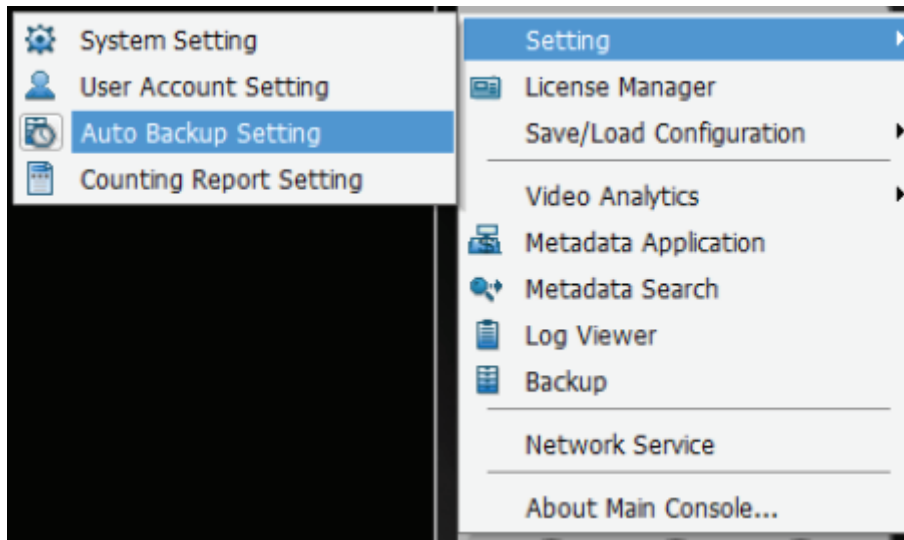

Copy Privilege to

## Auto Backup Setting

Go to **General Setting > Setting > Auto Backup Setting**

To configure your system to automatically back up video data.

There are 3 main options in Auto Backup config:

**Enable Schedule Back Up:** Check to enable the backup process.

**Select Camera(s) to Back Up:** Select the camera to back up.

**Option:** Select options for backup.

- **Location:** Define backup route.
- **Backup Playback System:** Check to backup the playback application with each process.
- **Send Mail when Backup Fails:** Check to receive an email notification when backup fails. Click Setup for email configuration. Select one or more contacts from the address book and configure customized message content.
- **Recurrence:** Choose start time and Recurrence: Daily or Weekly modes.

There are 4 main fields in Auto Backup Statistic:

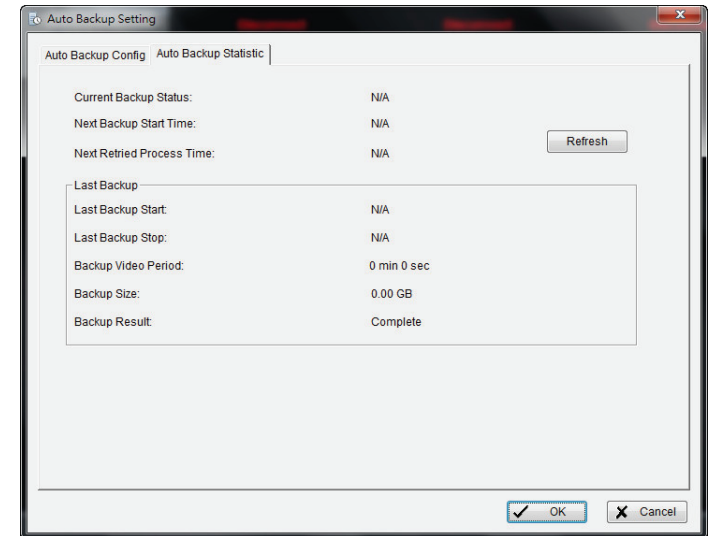

**Current Backup Status:** Displays whether the backup is underway, idle, or awaiting retry.

**Next Backup Start Time:** Displays the scheduled time for next backup process.

**Next Retried Process Time:** Displays the scheduled time for next backup retry process.

**Last Backup:** Displays information about the most recent backup.

- **Last Backup Start:** Displays the time and date the last backup started.
- **Last Playback Stop:** Displays the time and date the last backup was completed.
- **Backup Video Period:** Displays the total time that the last backup took to complete.
- **Backup Size:** Displays total file size of last backup.
- **Backup Result:** Displays the result of the last backup.

**Format Setting:**

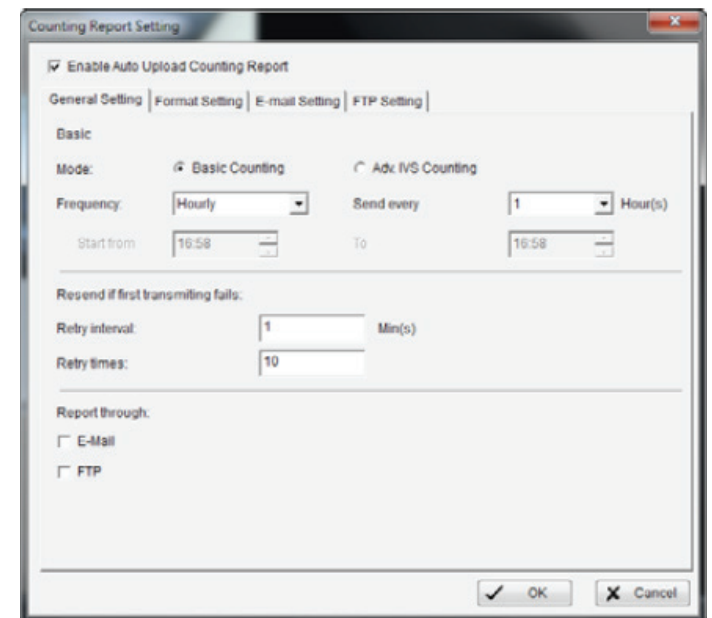

- Report format: Select report format (Diagram / .CSV) and file name prefix.
- Advance setting: Customized column name for .CSV format.

**E-mail Setting:**

- Synchronize with Hotline E-Mail setting: Click this option to synchronize the setting and not be asked to input the information again. Skip the option to input all necessary information of an SMTP server.

**FTP Setting:**

- Synchronize with Hotline FTP setting: Click this option to synchronize the setting and not be asked to input the information again. Skip the option to input all necessary information of an FTP server.

## Counting Report Setting

Configure system to automatically send out the people counting report via E-mail or FTP periodically.

### General setting:

**Mode:** Select counting source you would like to backup.

**Frequency:** Define the report frequency.

**Resend if first transmitting fails:** Setup retry internal and times.

**Report through:** Select report method.

### Format Setting:

**Report format:** Select report format (Diagram / .CSV) and file name prefix.

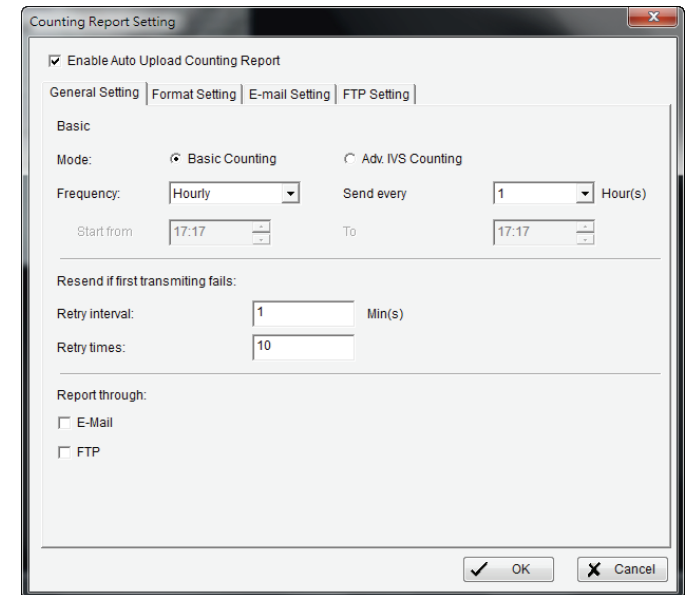

**Advance setting:** Customized column name for .CSV format.

### E-mail Setting:

**Synchronize with Hotline E-Mail setting:** Click this option to synchronize the setting so no need to input information again. Skip the option to input all necessary information of an SMTP server.

### FTP Setting:

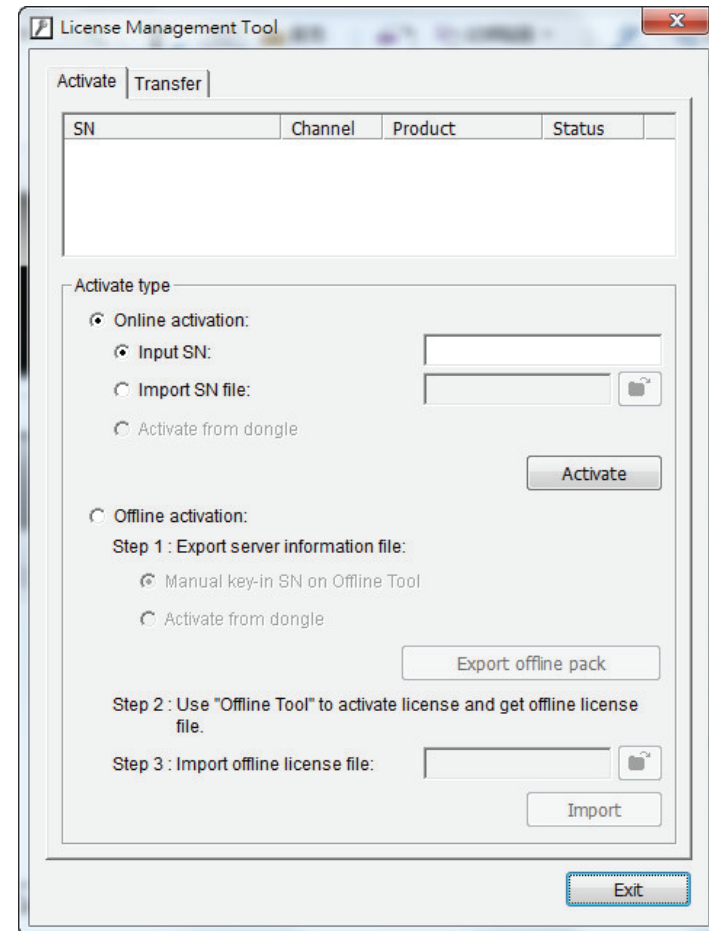

**Synchronize with Hotline FTP setting:** Click this option to synchronize the setting so no need to input information again. Skip the option to input all necessary information of an FTP server.

## License Manager

Go to **General Setting > License Management** in the Main Console to activate the license.

**Note:** Please refer to the **License Management Tool** section for details.

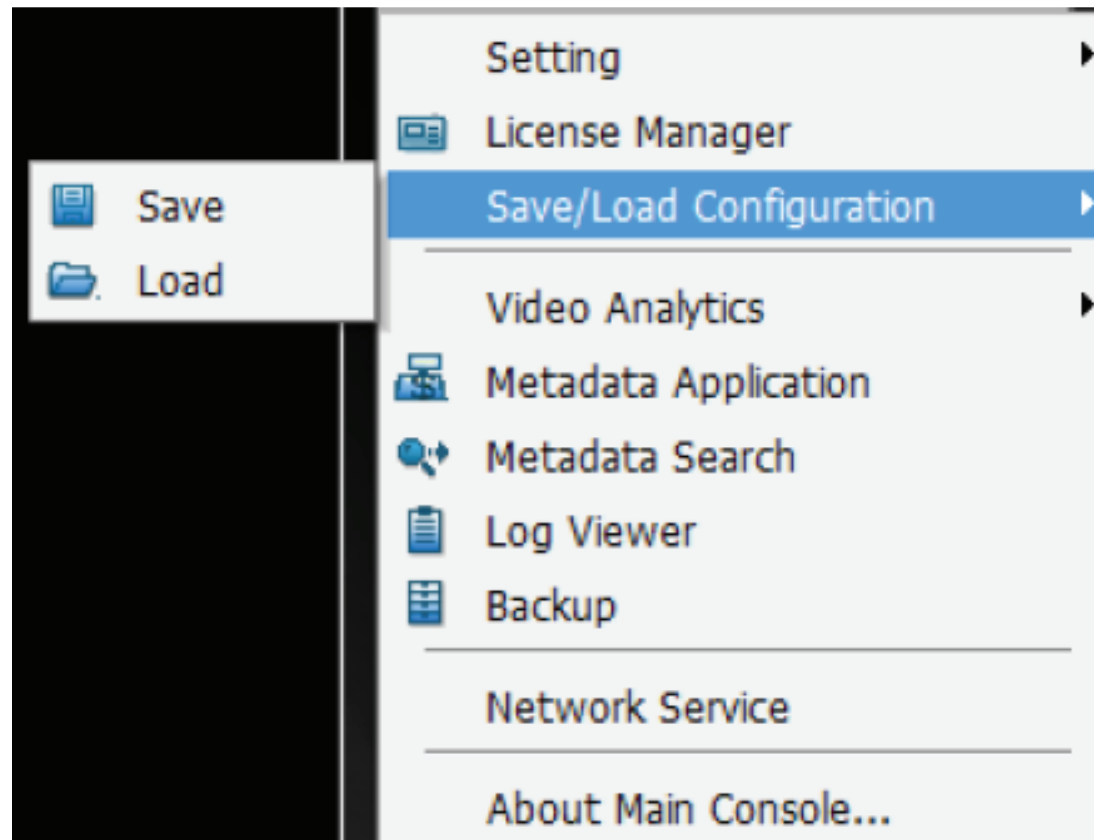

## Save/Load Configuration

The Save/Load Configuration function allows system users to save any specific setting as a .cfg (config) file. You may save several different .cfg files at any time.

**Save Configuration:** To save a specific setting, go to **General Setting > Save/Load Configuration > Save**. In the popup window, type in the file name and then save it as a .cfg file.

**Load Configuration:** To load a specific setting, go to **General Setting > Save/Load Configuration > Load**. In the popup window, go to the directory that you saved the .cfg file at, select any one of them and then click **OK** to load the file.

**Note:** *The Main Console will be automatically shutdown after loading a new configuration. Please re-start the Main Console manually.*

## Video Analytics - Counting Application

Count objects, people or vehicles passing through pre-defined detection zones. To access this page, login with admin account or user account with privilege of config main system.

Camera List: Select which camera would enable counting application.

### Operation:

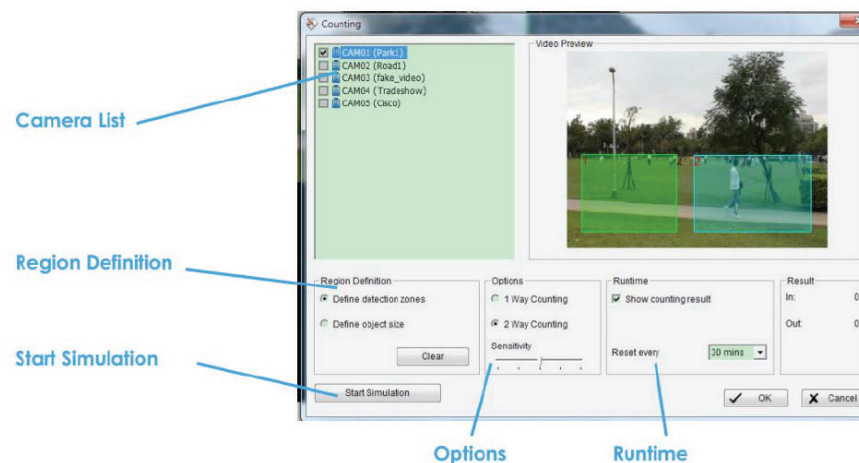

**Define detection zones:** Defined the detection zone.

**Define object size:** Defined the size of the object to count.

**Options:** 1Way Counting will take objects going from Region 1 to Region 2 as one count. In 2 Way Counting mode, it counts either going from Region 1 to Region 2 or from Region 2 to Region 1.

**Runtime:** Check the boxes to show the counting result on the screen and/ or show object bounding box, which draws the shape of the object that the system detects in red squares. You can choose from the drop-down menu of how long you want to reset the counting number.

**Start Simulation:** Click to test the setting.

## Video Analytics – Privacy Mask

Mask your video with dark areas to protect your privacy.

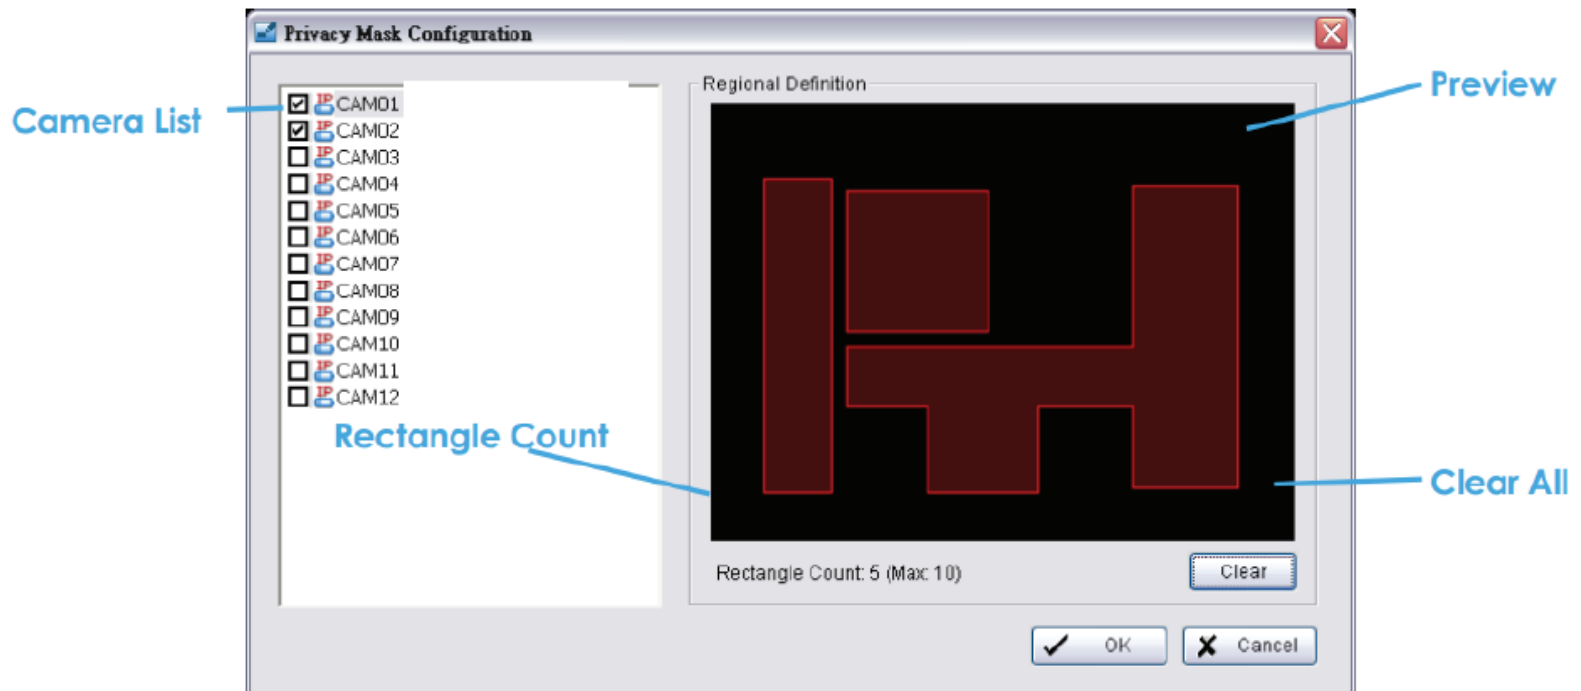

To access this page, login with admin account or user account with privilege of Config main system. Privacy mask settings will apply to local and remote live view, web live view, local playback, remote playback and web playback.

**Camera List:** Check cameras to enable privacy mask.

**Regional Definition:** Click and drag to define privacy masked areas.

**Rectangle Count:** Maximum 10 rectangles can be drawn to define privacy masked areas.

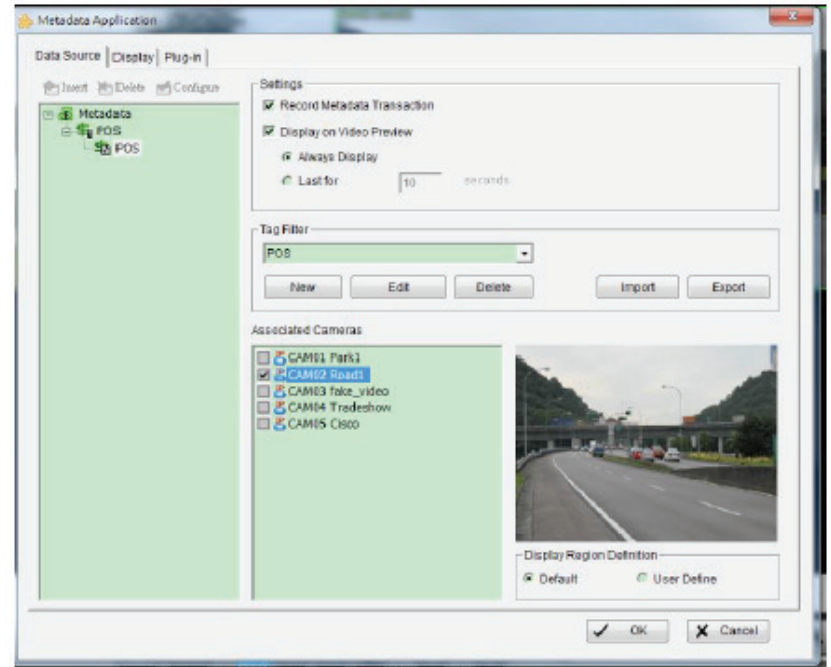

**Clear:** Click to clear all rectangles

## Metadata Application

The Metadata application now supports three different data types, including POS, LPR and access control.

This tool can be used to General Setting these devices. Note that you will need additional licenses to use these features.

## Network Service

There are 5 types of network services: **Live Streaming Server**, **Remote Playback Server**, **3GPP Service**, **Remote Desktop**, and **Central Management**. From the Main Console, go to **General Setting > Network Service** to open the **Network Service** window.

### Live Streaming Server

With Live Streaming, the system allows remote users to log in to a specific computer and view cameras that are connected to it. As a System Administrator, you can monitor these accounts in order to maintain the efficiency of the system.

#### Main

From the Live Streaming Server window, administrators can view all the clients who have logged in. It also enables Administrators to view live video from a remote location.

## Client List

**Client Count:** Shows the number of channels that are connected.

**Kill:** Highlight an IP address and click **Kill** to block the client from your client list.

**Kill All:** Click to block all the clients that are currently logged in to your system.

## Service

**Server Status:** Click **Start/Stop** to turn on/off the server.

## Options

To modify this section, click **Stop** to stop the server.

**Port:** Assign a port for the client to connect to your system via **Remote**

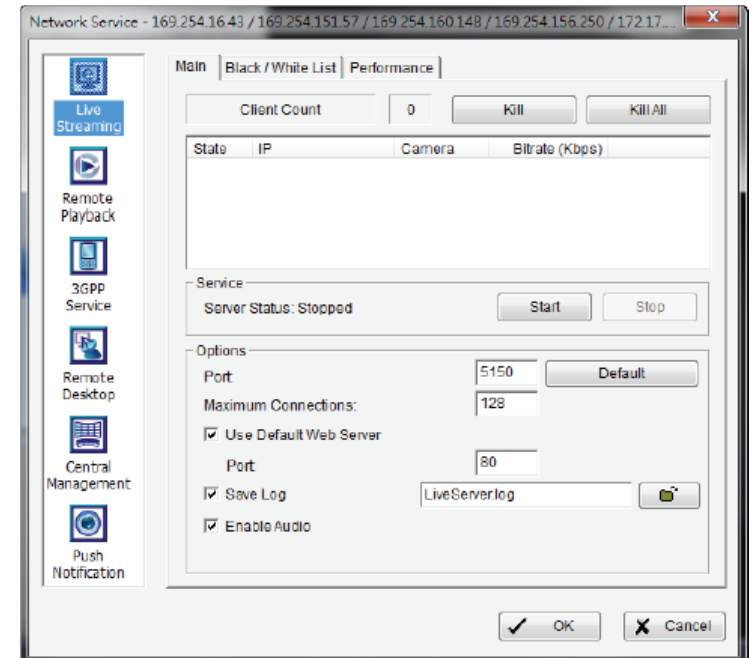

**Live Viewer.** Default port is **5150**.

**Maximum Connections:** Number of connections that are allowed to connect to the system. The maximum is **128**, one camera video counts as one connection.

**Use Default Web Server:** Activate the Web server by selecting this box. Clients will be able to watch live video via Internet Explorer. The default port for live streaming server is **80**.

**Save Log:** Select to save the current log information to your computer.

**Enable Audio:** Select this option to enable audio transmission along with video stream.

## Live Streaming - Black / White List

**Enable White List:** Select to activate the white list filter. Only IP address from this list is allowed to log in.

**Enable Black List:** Select to activate the black list filter. The IP address from this list will be blocked.

**IP Address:** Enter an IP address or two sets of IP address to indicate a series of IP addresses.

**Add/Delete:** To add the IP address into the list or to remove from the list.

**Apply to All Network Servers:** Click to apply these settings to both Live Streaming Server and Remote Playback Server.

### Live Streaming - Performance

This window displays the **Total bitrate** and individual **Camera bitrate** information.

## Remote Playback Server

With the Remote Playback function, the system allows remote users to log in to a specific computer and withdraw data files that are stored. As a system administrator, you can monitor the accounts logged in to maintain the system efficiency.

### Main

This window displays all the clients who are currently logged in and watching a playback video from a remote location.

### Client List

**User Count:** Displays the number of users that are connecting to the system.

**Kill:** Highlight an IP address and click **Kill** to block the client from your client list.

**Kill All:** Click to block all the clients that are currently logged in to your system.

### Service

**Server Status:** Click **Start/Stop** to turn on/off this service.

### Options

**Port:** Assign a port for clients to connect to your system via Remote Playback. The default port is **5160**.

**Maximum Users:** Number of connections that are allowed to connect to the system. The maximum is **64**.

**Note:** A single user logged in to the server is considered as one account.

**Use Default Web Server:** Activate the Web server by selecting this box. Clients will be able to watch live video via Internet Explorer. The default port is **80**.

**Save Log:** Save the current log information.

**Note:** Ensure that the server is stopped before making any changes.

**Remote Playback - Black / White List**

**Enable White List:** Select to activate the white list filter. Only IP address from this list is allowed to log in.

**Enable Black List:** Select to activate the black list filter. The IP address from this list will be blocked.

**IP Address:** Enter an IP address or two sets of IP address to indicate a series of IP addresses.

**Add/Delete:** Add the IP address into the list or remove from the list.

**Apply to All Network Servers:** Click to apply these settings to both Live Streaming Server and Remote Playback.

### Remote Playback - Performance

This window displays the **Total bitrate** and individual **Camera bitrate** information.

## 3GPP Service

When starting the 3GPP service function of your computer, the system allows remote users to log in and view cameras that are connecting to it with 3GPP supported mobile phone.

### Client list:

Client Count: Show the number of channels that are connected to system.

### Service:

**Server Status:** Click **Start/Stop** to turn on/off this option.

**Options:** Adjust the setting only when the server is stopped.

**Port:** Assign a port for the clients to connect to your system via 3GPP Service. Default port is 554.

**Enable User Authentication:** User need to insert the username and password to login to the 3GPP server and view the video stream.

## Remote Desktop

This window allows remote users to use Remote Desktop Viewer to login and configure the system. Refer to the **Remote Desktop Viewer** section to install and use this tool.

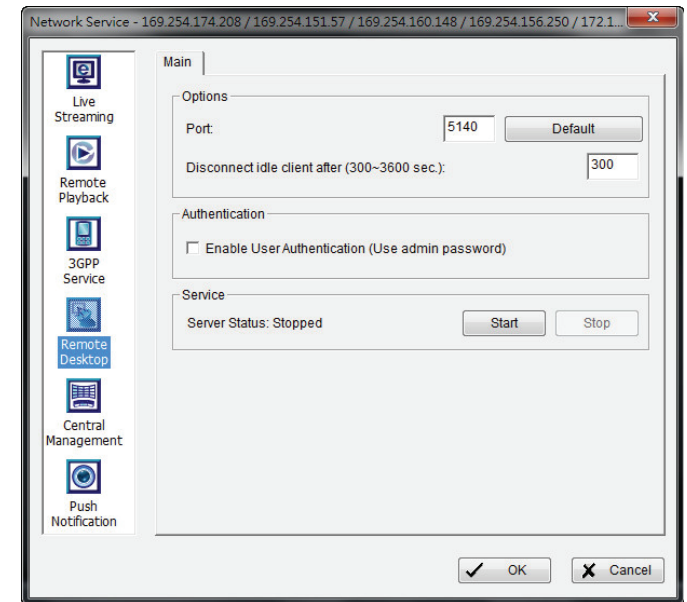

### Options

**Port:** Assign a port for Remote Desktop Viewer, so that users can login and configure system.

**Disconnect idle client after (300~3600 sec):** Auto disconnects an online user who is idle for more than the specified time period.

**Authentication:** Enable this option to allow only an administrator to login into the system.

**Server Status:** Click **Start/Stop** to turn on/off this service.

## Central Management

This service only supports Central Management System (CMS). Having started the Central Management Service, Main console sends event information to CMS and allows the CMS system to control I/O devices from a remote site.

**Note:** To enable this action, go to **Guard >Action** and select **“Send to Central Server”** to enable the action triggered by preference event.

### Client list:

**Client Count:** Show the amount of NCS Servers that are connected to system.

**Kill:** Highlight an IP address and Click the **“Kill Client”** button to block the client from your client list.

**Kill All:** Click this button and then block all the clients logged in to your system.

### Service:

**Server Status:** Click **Start/Stop** to turn on/off this option.

**Options:** Adjust the setting only when the server is stopped.

**Port:** Assign a port for CMS System to connect Main console system. Default port is 5170.

**Maximum Connections:** Number of connections from CMS Servers that are allowed to connect to the system. The default is 8 CMS Servers and maximum is 16.

## Push Notifications

When starting the Push Notification service function of your computer, the system allows users to view and delete mobile device.

### Device list:

**Device Receive Count:** Show the amount of user with mobile device that are connected to system.

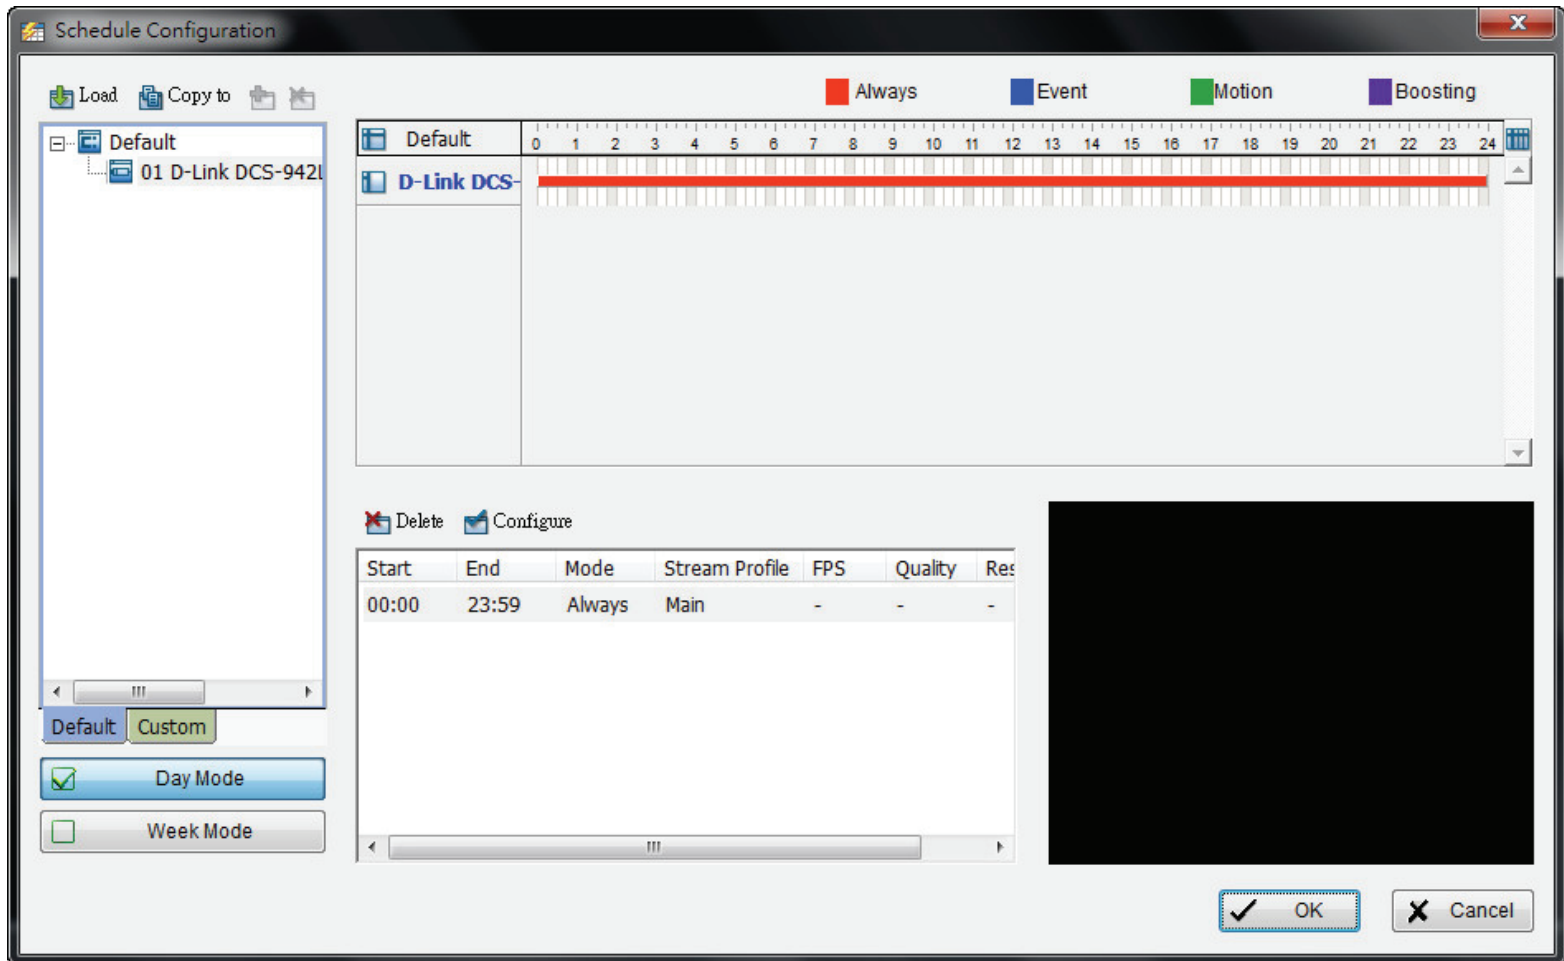

**Kill:** Click the “Kill” button to delete the user from your device list.

**Kill All:** Click this button and then delete all the devices logged in to your system.

# Schedule System

Click the **Configure Schedule System** icon on the Main Console to set up the time duration for video recording.

## Day Mode

Schedule the camera(s) to record video every day at the same time.

There are three ways to setup the time schedule for each camera:

1. Load a preset mode
2. Insert a new schedule manually
3. Copy to other cameras after the manual setup

## Load Preset Modes

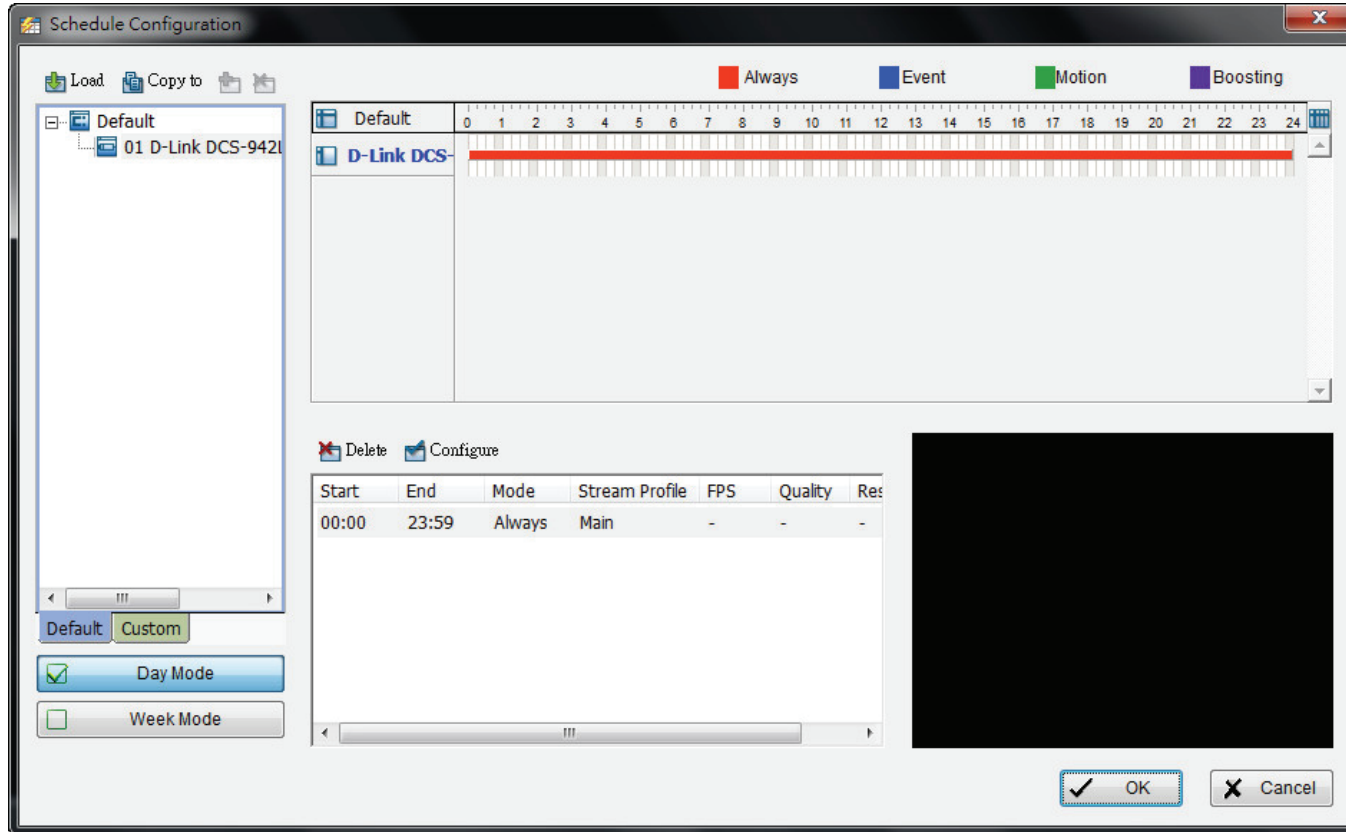

The system provides six modes to quickly setup the recording schedule. Click  Load to select the preset mode. Refer to the following table for definitions of each mode in each series.

Mode	Format	Time	Record Mode	key frame only	Adjust video frame	Profile
Regular	M-JPEG	00:00-24:00	Always	<input checked="" type="checkbox"/>	uncheck	Main
	MPEG4/H.264			<input type="checkbox"/>		
Office	M-JPEG	08:00-20:00	Always	<input checked="" type="checkbox"/>	uncheck	Main
	MPEG4/H.264			<input type="checkbox"/>		
Shop	M-JPEG	10:00-22:00	Always	<input checked="" type="checkbox"/>	uncheck	Main
	MPEG4/H.264			<input type="checkbox"/>		
Highly Secure	M-JPEG	00:00-24:00	Always	<input checked="" type="checkbox"/>	uncheck	Main
	MPEG4/H.264			<input type="checkbox"/>		
Disk Saving	M-JPEG	00:00-24:00	Motion	<input checked="" type="checkbox"/>	10 fps	Main
	MPEG4/H.264			<input type="checkbox"/>		
Minor	M-JPEG	00:00-24:00	Motion	<input checked="" type="checkbox"/>	5 fps	Main
	MPEG4/H.264			<input type="checkbox"/>		

## Insert a New Schedule Manually

### Step 1

Left-click and draw the bar you want to add to the time table. The scheduled time will be seen as a grey bar.

### Step 2

Click on the **Configure** icon or double-click the schedule information to change the settings.

### Step 3

Click **OK**.

## **Copy Schedule**

You may set up the schedule for each channel/camera by repeating the process above, or simply apply the settings of a single camera to all the others by clicking the **Copy To** icon on the top of the display window.

## **Week Mode**

Schedule the camera(s) for each day of the week. In addition, you may assign holidays under the Week Mode.

### **Default**

Follow the same process to setup the schedule for every day in a week.

### **Holiday**

You may assign holidays where the system will work according to the pre-defined Sunday schedule.

### **Custom**

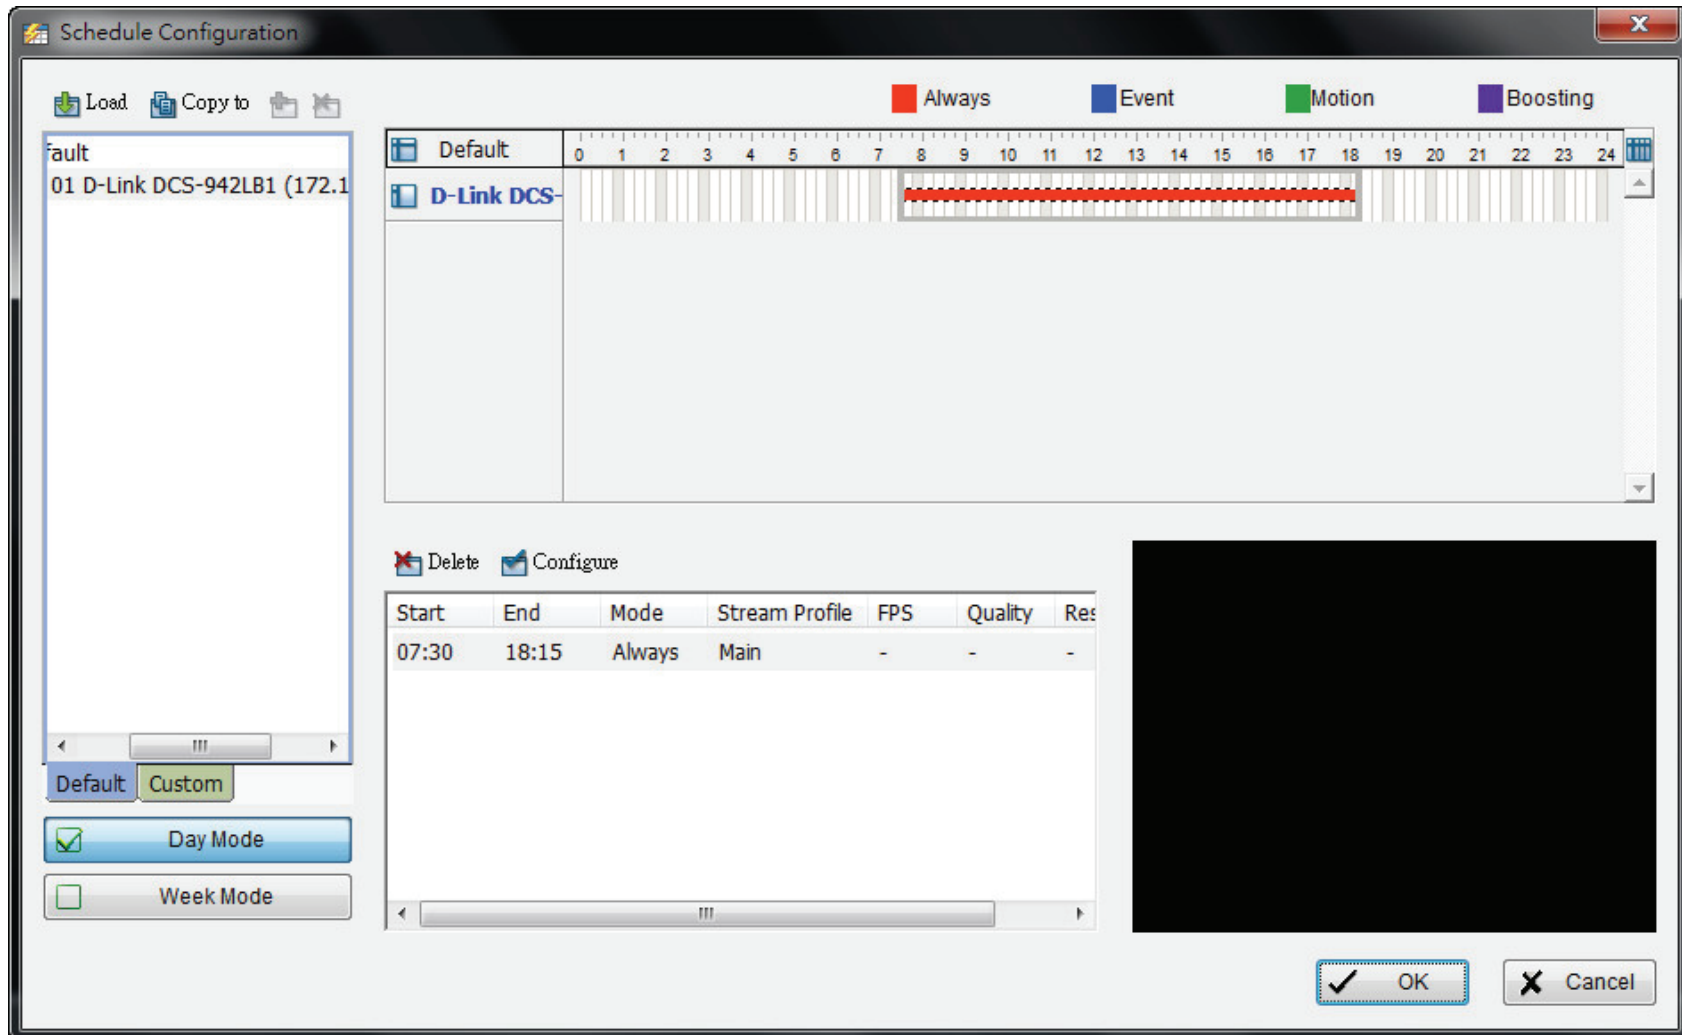

You can assign a particular date(s) for the system to work according to a special schedule(s).

## Adjust the Schedule Settings

You can manually change the settings at any time after you insert or load a schedule.

**Option 1:** Select the **Time Bar** and slide the bar to the left or right to change the start and end points.

**Option 2:** Click **Configure** or double-click on the schedule information (highlighted in blue) to open the **Encoding Options** window and modify the settings.

## Record Mode

There are 2 recording modes and 5 video profiles to choose from. Please choose one that best suits your scenario.

### Always Record

Select this option to record video continuously.

### Record on Motion

Select this option to start recording when motions are detected. Please adjust sensitivity, the frame interval, and set up the detection zone to detect motion. Frame interval is the interval in the number of frames between each check by D-ViewCam. To set up a single detection zone, left-click and drag the mouse to draw a rectangle. To set up more than one detection zone, simply repeat the same process or click **All** to select the entire screen.

### Boosting Record on Event:

This option enables you to record at lower frame rate at regular times, and at higher frame rate under Smart Guard triggered events.

Select this option to obtain the “**Select Event**” panel. Choose from the list any Smart Guard or digital input events or video analytics from the device. The chosen event(s) will trigger the recorded action.

**Note:** Please note it is required to enable “**Smart Guard**” from the Main console panel before **General Setting** “**boosting record on event**” to trigger recording.

### Record on Event:

Select this option to start recording at any predefined event, including Smart Guard events, metadata events, digital input events and video analytics from devices.

**Note:** The maximum number of rectangle detection zones you may create is 10.

**Enable Dual Record:** recording two video streaming from IP camera at the same time.

**Record Audio:** Use the check box to enable or disable audio recording

**Keep key-frame only:** System will only record key frames of the video stream.

**Note:** The key frame interval is controlled by each camera manufacturer and cannot be adjusted.

### Pre-record/Post-record Time

The pre-record/post-record function saves the recording data accordingly. For instance, to set up a 5 second pre-record time means the system will start saving the recording data 5 seconds before the event happens.

**Note:** The maximum record period is 60 seconds.

# Playback

The Playback console allows you to watch recorded video, view and/or search for unusual events, and view recorded system information.

1	Information Window
2	Play/Rewind/Fast Forward
3	Volume Control
4	Scroll Bar

5	Cue (Start/Stop Point)
6	Speed
7	Zoom
8	Print & Log Viewer

9	Save image & Export Video
10	Post Processing Tool & Backup
11	Date Time Search Dialog & General Setting
12	Screen Division

13	Smart Search
14	Minimize Window
15	Exit Window

1. **Information Window:** Display video date and time, current video status, cue in/out points' time, and speed.
2. **Play/Rewind/Fast Forward:** Control the video.
3. **Audio Volume Control:** Adjust the sound level.
4. **Scroll Bar:** Indicates the status of the playing video; drag it to where you want to review.
5. **Cue:** When playing video, click on the **Cue In/Cue Out** icon to set the starting/ending point of a saved video clip. The Cue In and Cue Out time will be displayed on the Playback Information Window once they are set.
6. **Speed:** Control the speed of the playing video. Click + to speed up and – to slow down.
7. **Zoom:** Zoom in and out of the recorded video.
8. **Print & Log Viewer:** Click  to open the Print window and  to open the Log Viewer window.
9. **Save image & Export:** Click  to take a picture and  to open the Export window.
10. **Post Processing Tool & Backup:** Click  to open the Post Processing Tool window and  to open the Backup window.
11. **Date Time Search Dialog & General Setting:** Click  to open the Date Time Search and  for the General Setting window
12. **Screen Division:** Allocate the sub-screen display by clicking on the desired layout. To switch to a single camera display, double-click on a particular sub-screen. Double click on the screen again to restore the previous screen division layout. To view in fullscreen mode, right-click on the screen to enable Toggle Fullscreen.
13. **Smart Search:** Click the  **Smart Search** button to access the **Smart Search** feature.
14. **Minimize:** Minimize the Playback console.
15. **Exit:** Close the Playback window.

## Date Time Search Dialog

Go to **Playback** console and click **Open Record** to access the **Date Time Search Dialog**. Here, you can review video records.

### Record Display

The record display window displays information about the video clips. These clips can be sorted by date (calendar view) or title (list view).

**Remote Server Site:** Select to open **Remote Playback Site Management**. This site allows you to access local PC or set up the remote playback server. Use **Select Folder** to directly access the recorded data folder or **Recent List** to access previously browsed recorded folders.

**Note:** To use **Select Folder** option you need the Main Console password.

**Refresh:** To refresh the Record Display window.

**Log Viewer:** To access the Log Viewer Tool.

**Previous Days:** To show recorded videos from the previous recording date.

**Next Days:** To show recorded videos of the next recording date.

## Date Time Period

Select the starting and ending time points to review a video.

## Video Preview

Select **Enable Preview** to preview the selected video.

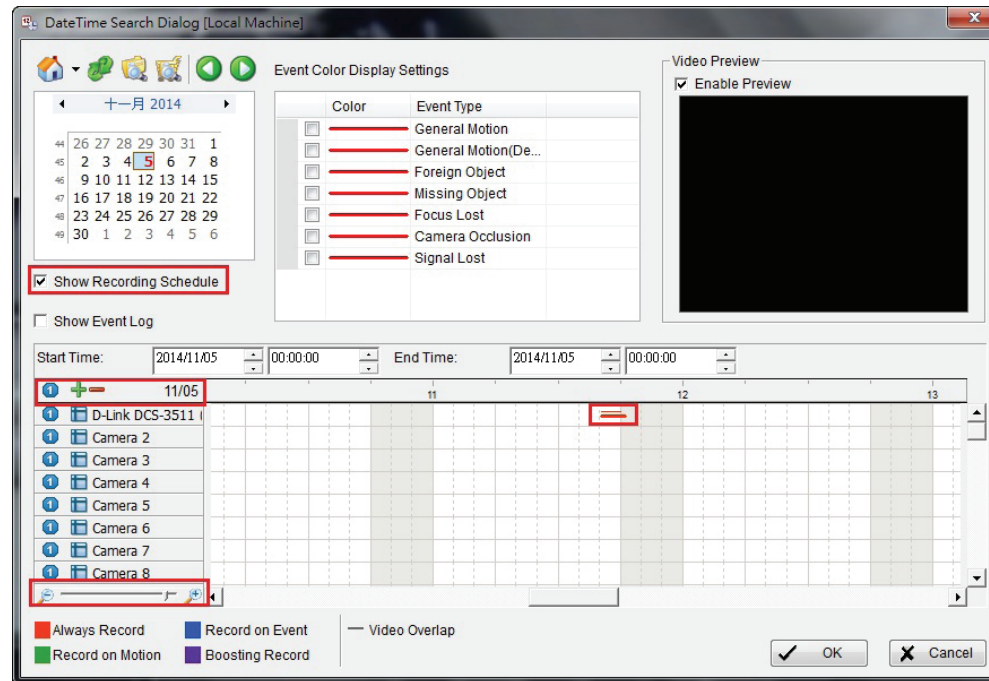

## Event Type

You can change the color of the event by clicking on the color bar and then click the down arrow.

## Time Table

- Click  to select all channels or  to deselect all channels. Finally, utilize the  scale bar to modify the time table.
- Select **Show Records** to display the time period of recorded data.

\* Support for dual playback: If the camera has dual recording feature, you can click the numeric button near the camera name to switch between 2 recording schedules (thick line) and available recordings (thin line).

- Select **Show Event Log** to display the time of event detected.

## To Playback Video

**Step 1:** From the **Record Display** window, select the date of the recorded video you want to view. The red, green and blue lines in the time table indicate the available video records.

**Note:** The **Record Display** window can be displayed in (a) calendar view or (b) list control view. To modify these settings, click **Settings** on the Playback Console.

**Step 2:** Use color bars to differentiate event types.

**Step 3:** Highlight the video clip you want to review by left clicking and dragging the time period. You may also utilize the **Start Time** and **End Time** in the **Date Time Period** section.

**Step 4:** Select **Enable Preview** in the **Video Preview** section to view your video.

**Step 5:** Click on the camera name to add or remove cameras that you want to playback.

**Step 6:** Click **OK** when finished.

## Search Mode

Go to **Playback** console and click  to open the **Smart Search** window.

### Alarm Event Type

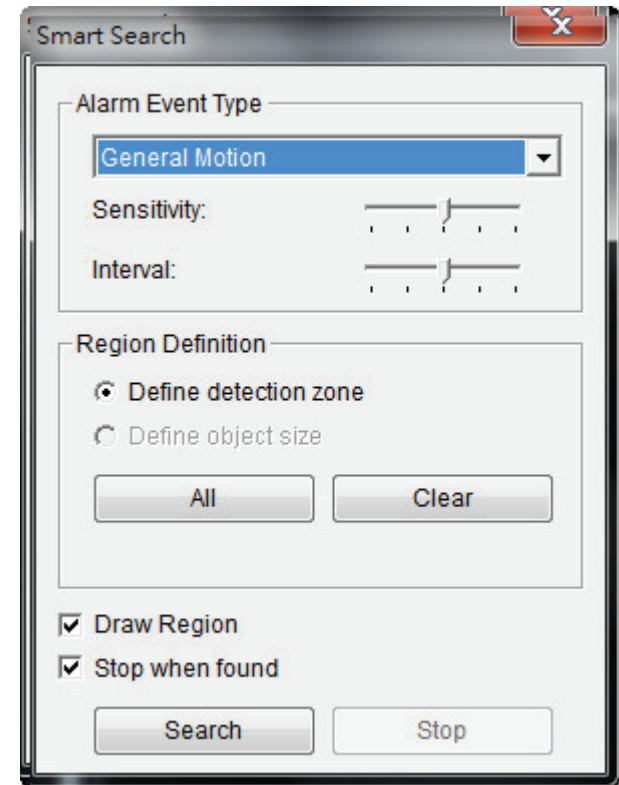

**General Motion:** Detects all movements in the defined area.

**Sensitivity:** This slider controls the sensitivity required to trigger the alarm. Slide the control to the right to increase sensitivity (relatively small movements will trigger the alarm) or to the left to reduce sensitivity.

**Interval:** Move the slider control to the right to increase the time interval, so the alarm will be triggered only when the movement lasts longer; moving to the left will reduce the time interval.

**Define Detection Zone:** Left click and drag, to draw a detection zone on the video screen. You may define more than one zone on the screen by repeating the process.

**Stop When Found:** Select this option to stop the video when detecting motion in the detection zone. Unselect this option to keep the video rolling, and to display all the detected events on the search list. Click on the listed event to jump to the specific part in the video where motion is detected.

## Post Processing Tool

Go to **Playback** console and click  to open this tool.

### General Setting

Select to either apply the filter settings to only active channels or to all channels.

### Filter Setting

**Visibility:** Select to adjust the gamma value of the image to enhance the image and make it cleaner.

**Sharpen:** Select and move the slider control to the right to sharpen the image or to the left to soften the image.

**Brightness:** Select and move the slider control to the right to make the image brighter.

**Contrast:** Select to move the slider control to the right to increase contrast.

**Grey Scale:** Select to display the video record in grey scale mode. The image will be displayed in black and white.

**Default:** Click to restore the default settings.

**OK:** Click to save to apply your settings.

## Backup

Go to **Playback** console and click  to open this window.

Here, you can start a full function Playback Console and load the backup files on any Windows PC. You can monitor real time video and work on the backup files on separate computers simultaneously.

**Step 1:** Click **Open Record** in the **Playback** console and click **Backup**.

**Step 2:** In the **Date Time Period** section, select the **Start Time** and **End Time** for backup.

**Step 3:** In the **Select Camera(s)** section, select the camera(s) you want to backup.

**Step 4:** Click **Calculate Size** to calculate the size of the backup data.

**Step 5:** Under **Media**, select where you would like to save the backup data.

**Step 6:** Under **Option**, select the type of data you want to backup.

**Step 7:** Click **Backup** to start backup.

## Snapshot

Go to **Playback** console and click .

**Step 1:** Click on the camera display window to take a snapshot.

**Step 2:** Click **Save Image** when the image you want is displayed on the screen. You may click **Pause** to freeze the video and use **Step Forward/Step Backward** to find the picture(s) that you want to save.

**Step 3:** Select **OSD** to export the image with the date/time and camera number/name displayed. If the digital PTZ function is enabled in the display view, you can also select **Full size** or **Selected Region** as your image region.

**Step 4:** You have the option to copy the image to the clipboard or save it to your computer. Click **Save Image** and select the folder you want to save it to. Select the image format (BMP or JPEG) and click **Save**.

**Note:** You may skip step 3 by pre-setting a folder and format to save images.

## Export Video/Audio

Go to **Playback** console and click  to open this window.

**Step 1:** Click on the display screen of the Playback console to choose the camera display that you want to save as a video clip.

**Step 2:** Click the cue buttons to select the start and end points. The **cue in** and **cue out** time will be displayed in the information window.

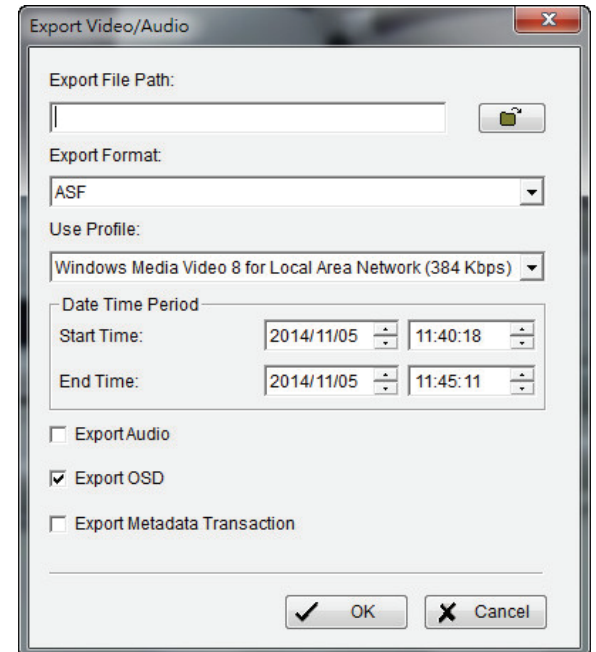

**Step 3:** Click the **Save Video** icon, select the location where you want to save the file to and enter the file name.

**Step 4:** Select **Export Format** from the drop-down list - ASF or AVI.

**Step 5:** Select a profile from the **Use Profile** drop-down menu.

**Step 6:** Select to export (i.e. save) the recorded video with audio, OSD (On-Screen Display), or export video only.

**Step 7:** Click **OK** to save video.

## Print

Go to **Playback** console and click  to open this window.

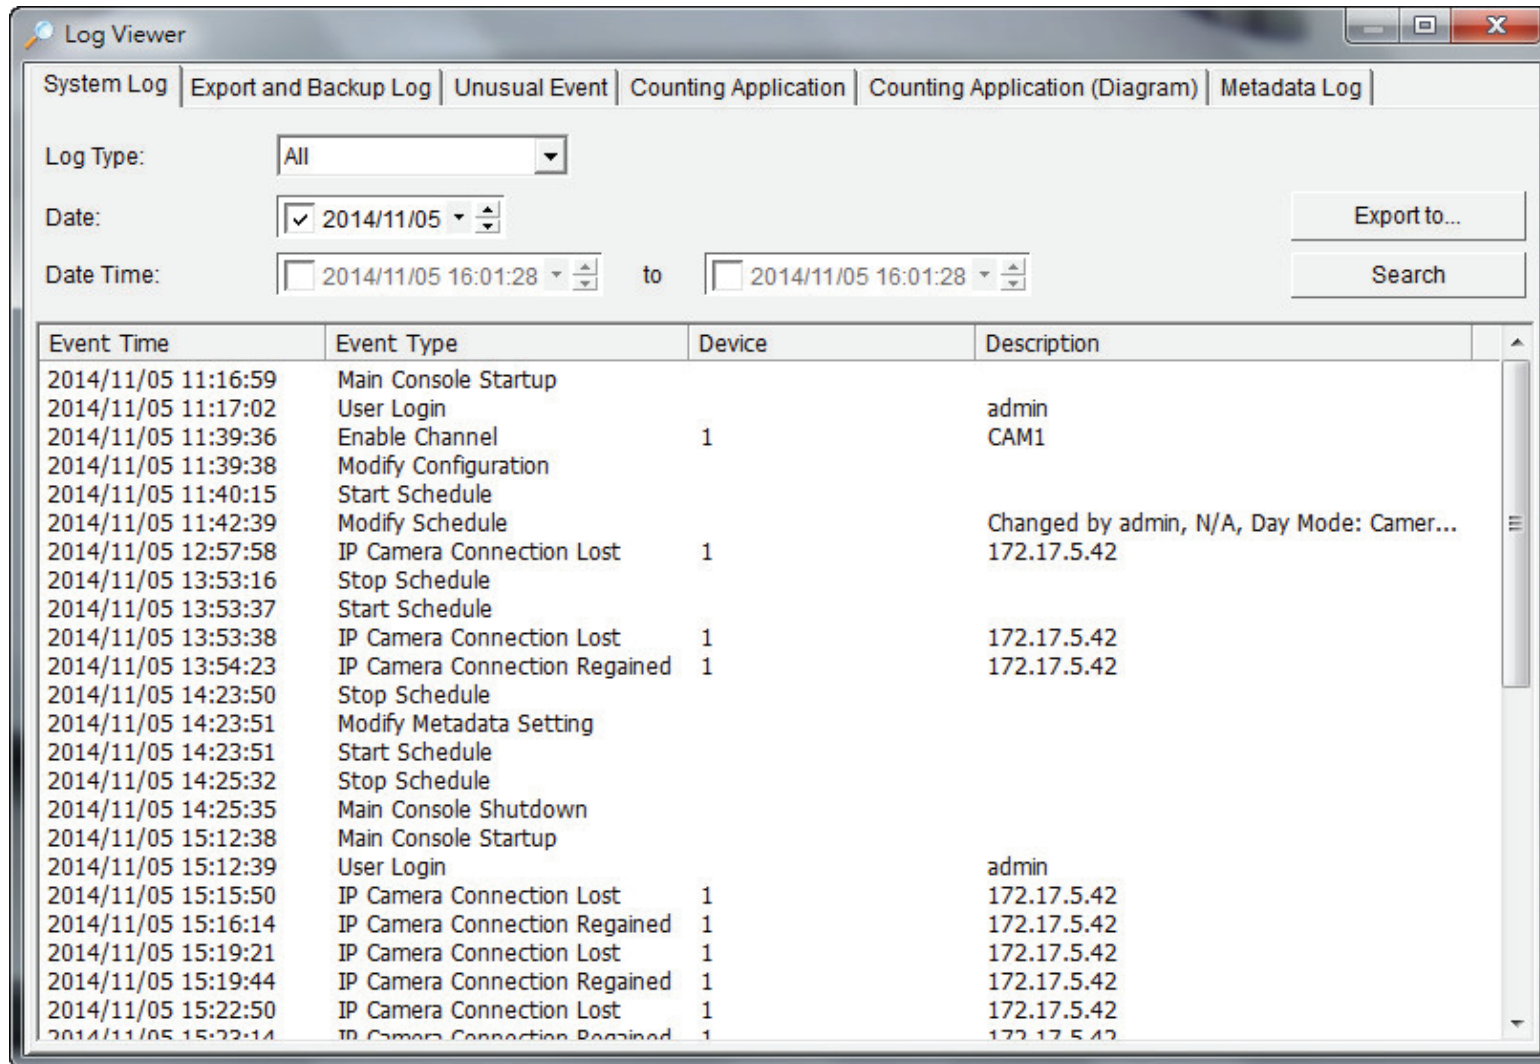

**Page Setting:** Select **Original Size** or **Fit to Page** options to print the image. Select the alignment from the **Align Image** drop-down list (Top, Center, or Bottom).

**Print Content:** Print the image from the selected channel or all the channels shown on the screen.

**Print:** Click to print the image.

## Log Viewer

The screenshot shows the Log Viewer application window with the following settings and data:

- System Log | Export and Backup Log | Unusual Event | Counting Application | Counting Application (Diagram) | Metadata Log

## Export and Backup Log

View the Export and Backup Log history that had been operated by local or remote user.

**Step 1:** Choose the type of event you want to check or select All from the drop-down menu for all types of events.

**Step 2:** View the events that happened on a particular date or during a given time period by selecting search period.

For a particular data: check the Date box right and indicate the date.

For a period: check the Date Time and then enter the date and time.

**Step 3:** Click Search

## Unusual Event

**Step 1:** Select the type of event you wish to view or select **All** from the drop-down menu to view all types of events. The types include **General Motion, Signal Lost,** and **Digital Input Triggered.**

**Step 2:** Select the camera channel you wish to view or select **All** for all available channels.

**Step 3:** View the events that happened on a particular date or during a given time period by selecting a search period.

**For a particular data:** Check the “Date” box and select the date you want to view.

**For a period:** Check the “Date&Time” box and then enter the date and time.

**Step 4:** Click **Search.**

## Export

After you search the log you want, you can export it to an Excel (.xls) or a text (.txt) file.

.txt

**Step 1:** Click the **Export To** button.

**Step 2:** Type the file name and select the file format (.xls or .txt).

## Counting Application

Display the history of Counting Application during a given time period.

**Step 1:** Select the channel you want to check or select All from the drop-down menu for all channels.

**Step 2:** Select search period. View the events that happened on a particular date or during a given time period by selecting search period.

**For a particular date:** check the Date box right and indicate the date.

**For a period:** check the Date Time and then enter the date and time.

**Step 3:** Click Search.

**Step 4:** Press the button Export to.

**Step 5:** Type the file name and choose the file format (.xls or .txt).

## Counting Application (Diagram)

Display the Counting Application data in diagram format.

**Step 1:** Select the channel you want to check or select All from the drop-down menu for all channels.

**Step 2:** From the drop-down menu, set up how you would like the diagram to be displayed. You have the options of one day, one month, or one year.

**Step 3:** Select a specific date to make it the start point of the diagram.

**Step 4:** Click Search.

**Step 5:** Press the button Export to.

**Step 6:** Type the file name and the file will save as BMP files.

## Metadata Log

View the Metadata Log history detected by the Smart Guard System.

**Step 1:** Choose the type of events you wish to view or select All from the drop-down menu to view all types of events. The types of Unusual Event include Transaction Start, Transaction End, Open Cash Register, Connection Lost, and special User defined event.

**Step 2:** Choose the camera channel you wish to view or select All for all the channels available.

**Step 3:** View the events that happened on a particular date or during a given time period by selecting search period.

**For a particular date:** check the Date box right and indicate the date.

**For a period:** check the Date Time and then enter the date and time.

**Step 4:** Click Search. A link ( ) will appear next to each event time where video is available. By clicking on the link, an instant playback window will pop up to show recorded video

**Step 5:** Press the button Export to.

**Step 6:** Type the file name and choose the file format (.xls or .txt).

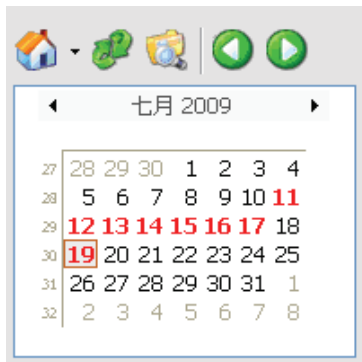

## Setting

Go to **Playback** console and click  to open this window.

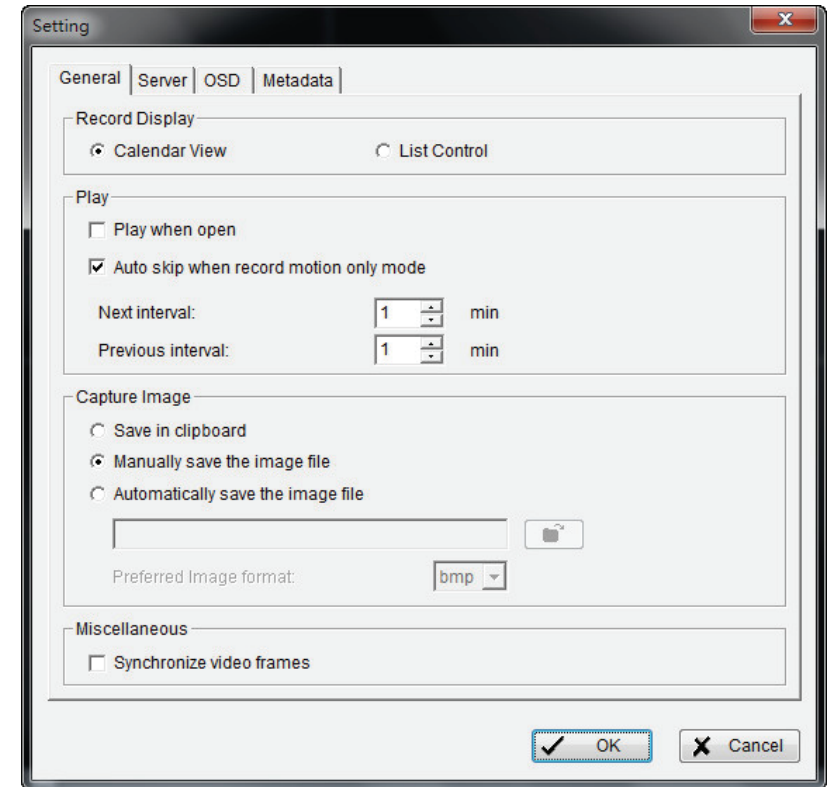

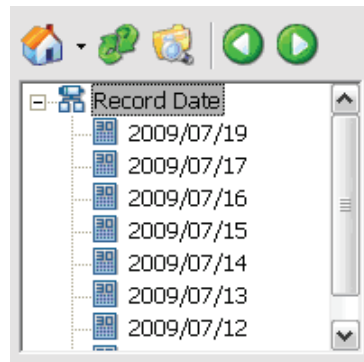

### General

#### Record Display

##### Calendar View

##### List Control

#### Play

- **Play when open:** Select this option to start playing the video clip everytime a record is withdrawn.
- **Auto skip when record motion only mode:** Select to set up the system to automatically skip to the points where motions were recorded.
- **Next interval:** Set the interval and click **Next** on the playback console to fast forward the video.
- **Previous interval:** Set the interval and click **Previous** on the playback console to rewind the video.

#### Capture Image

- **Save in clipboard:** The image will be saved in the clipboard and can be pasted to other applications.
- **Manually save the image file:** Select to manually save the image, and the format of the image.
- **Automatically save the image file:** By pre-setting the URL and the image format, the system will automatically save the image accordingly, when you click **Save** in the control panel.

## Miscellaneous

- **Synchronize video frames:** Select to prevent tearing that may occur in the video display. However, this will increase the CPU processing load.

### Remote Server

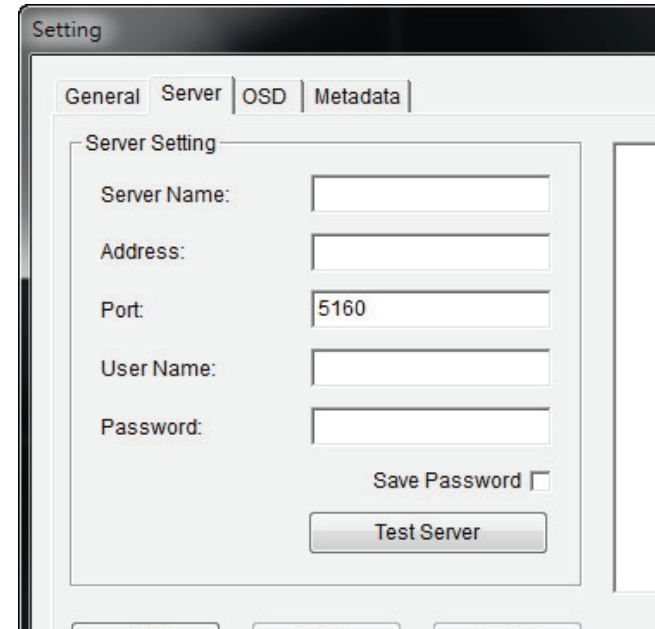

#### Add Remote Playback Site

Click the **Remote Server** icon to add and setup a remote playback site.

**Step 1:** Enter the IP address or DNS, Port, Username, and Password.

**Step 2:** Click **Add** to add the server.

**Step 3:** Click **OK** to exit.

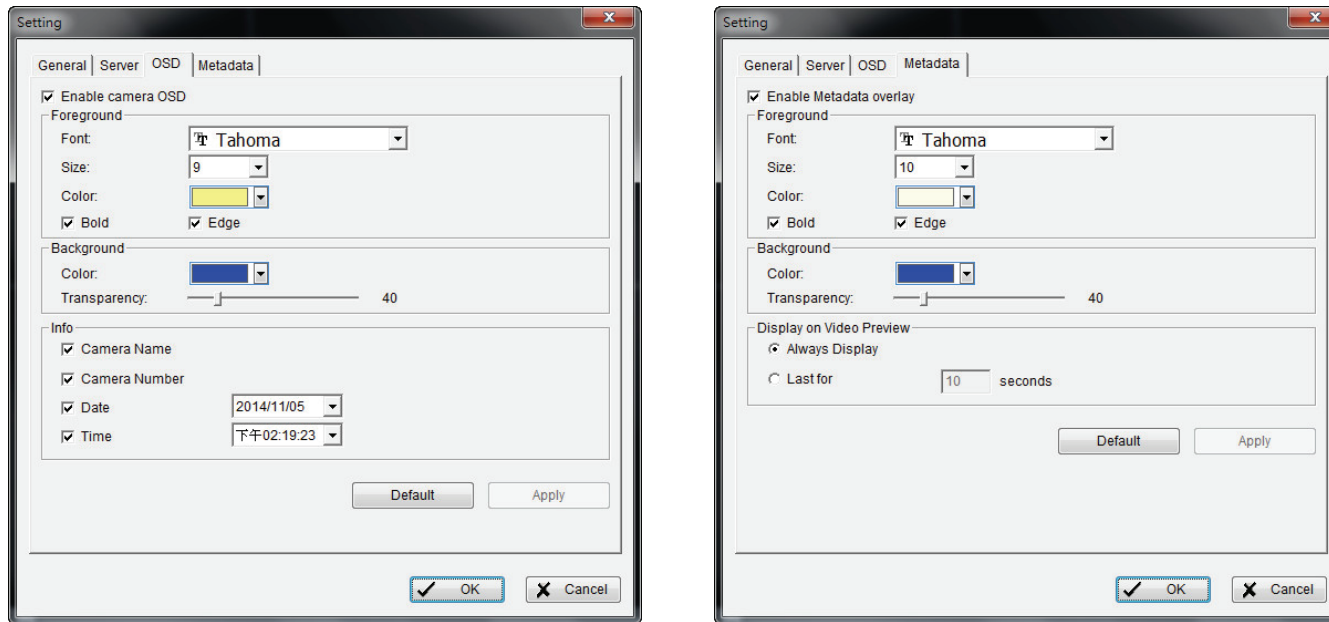

#### Access Remote Playback Site

Go to the Date Time Panel and click the  icon on the top of the display window to access the Remote Playback Site.

## OSD

Select **Enable Camera OSD** to display video information of the recording video. Information includes camera name, camera number, date and time. Users also can set the font, size, and font color.

### On Screen Menu:

**Toggle Fullscreen:** Select to view cameras under full screen. Press "Esc" or right click to go back to original view.

**Enable ImmerVision PTZ:** Adjust PTZ in PTZ mode. (Depend on device)

**Enable Fisheye PTZ:** Adjust PTZ in PTZ mode.

**ImmerVision Lens Setting:** Select the mode of lens, original, PTZ mode, Quad mode and Perimeter mode. (Depend on device)

**Fisheye Lens Setting:** Select the mode of original, PTZ mode, Quad mode and Perimeter mode.

### Switch Recordings

With dual recording support, user can switch between Record 1 and Record 2 on right click screen menu as below.

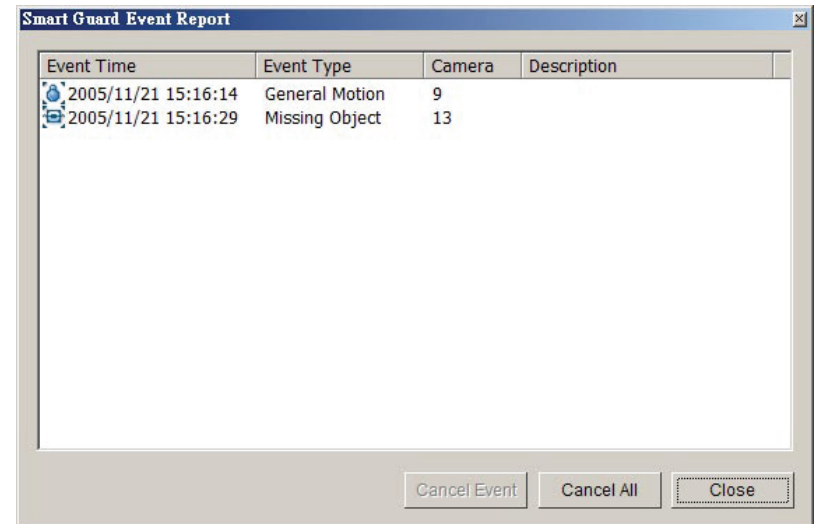

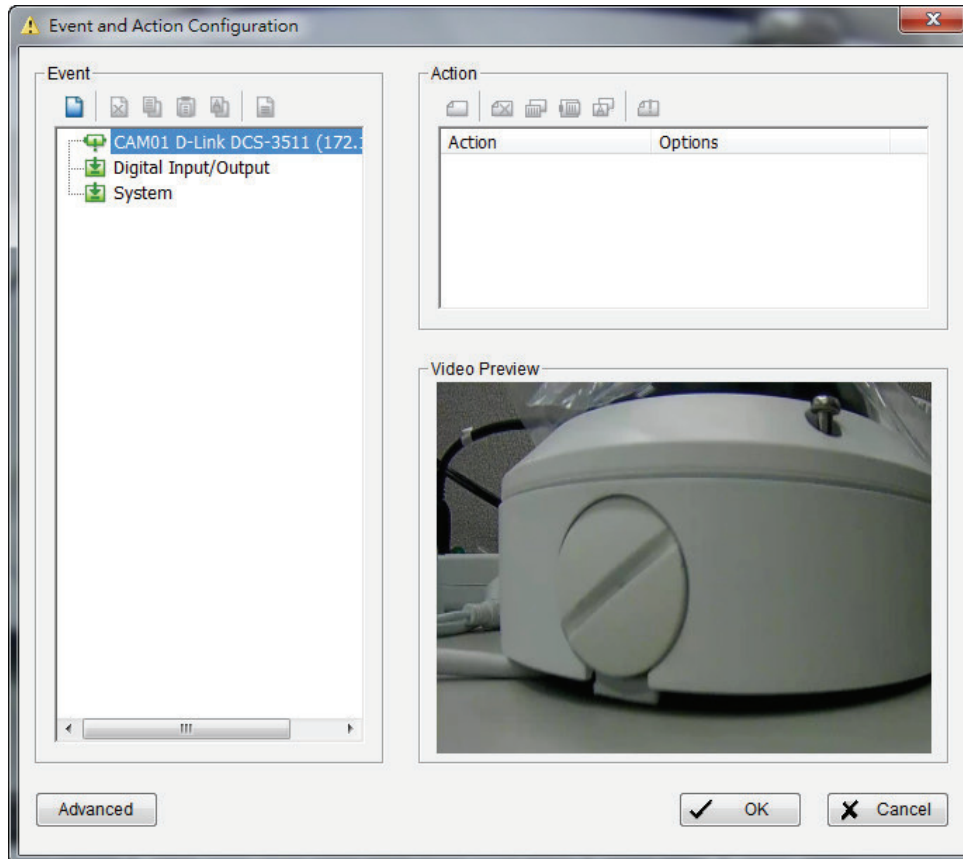

# Smart Guard System

Click the **Configure Smart Guard System** icon  to open the **Event and Action Configuration** window.

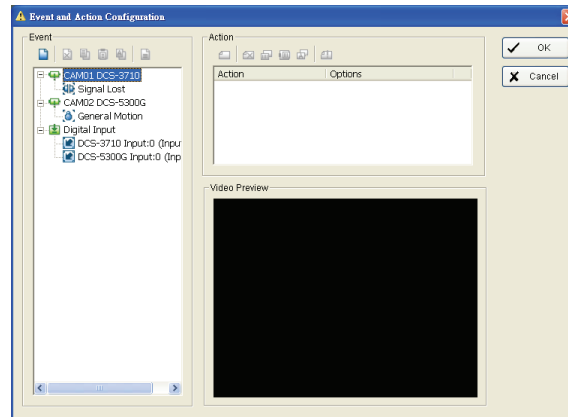

Select an event to be detected and set up an **Action** for the D-ViewCam Plus system to perform.

**Note:** To access the **Smart Guard Event Report**, click **Start Monitor > Open Event Report** in the Main Console.

## Event

There are 3 sources of events: **Camera** (video image), **Digital Input** (connected to your camera(s)) and **System** (condition of your hardware). You can assign multiple events by following the instructions below.

### Assign a Camera Event

**Step 1:** Select a channel from the camera list and click **Insert Event** .

**Step 2:** There are three types of events: **Signal Lost**, **General Motion**, and **General Motion (Device)**. Select the event you want in the **Event Type** list and click **OK**.

**Step 3:** Configure the **Event Type** settings. Refer to the next section.

## Alarm Event Configuration

This section describes the basic setting of Signal Lost and General Motion events.

### Signal Lost

**Enable Event:** Select to activate the event.

### Life Cycle

- **Automatically cancel event when event disappears:** The alarm/action will be cancelled once the event is fixed or ends.
- **Manually cancel event or event last triggered:** The alarm/action will continue to be active until canceled. To cancel the event, click **Start > Open Event Report > Cancel All Events**.
- **Cancel event after timeout xx seconds:** Select and enter the time (in seconds) to cancel an event.
- **Always activated:** Allow alarm to be activated at all times.
- **As Day Mode Schedule:** Customize a specific time range for the alarm to be activated. The alarm will be available daily according to your settings. Click **Day Schedule** to configure the schedule for this setting.
- **As Week Mode Schedule:** Customize a weekly based time range for the alarm to be activated.

Click **Day Schedule** to configure the schedule for this setting.

Choose **Add Time Period** and drag on the selected timeframe to define an activated schedule.

Choose **Remove Time Period** and drag on the selected timeframe to subtract from existing schedules.

Click **Clear All** to remove all settings.

Click **Week Schedule** to configure the schedule for this setting.

Choose **Add Time Period** and drag on the selected timeframe to define an activated schedule.

Choose **Remove Time Period** and drag on the selected timeframe to subtract from existing schedules.

Click **Clear All** to remove all settings.

## General Motion

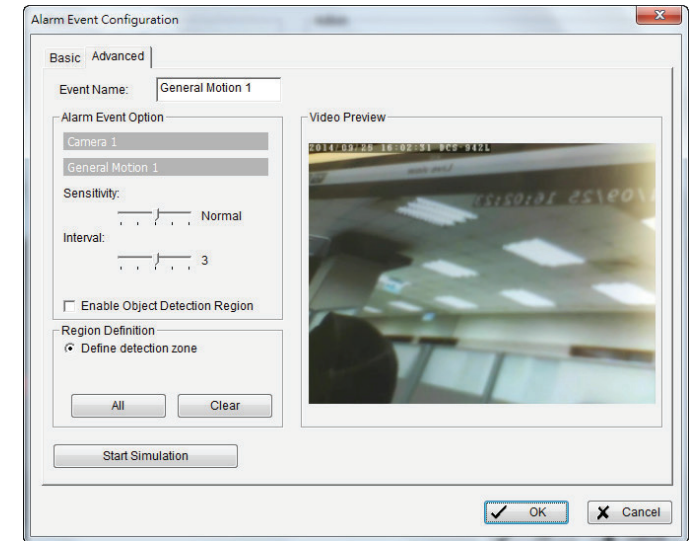

### Alarm Event Option

- **Sensitivity:** Click and move the slider control to the right to increase sensitivity so that a relatively small movement will trigger the alarm. Move the bar to the left to reduce sensitivity of motion detection. Setting up an appropriate sensitivity value will reduce the chances of a false alarm. For example, you can lower the sensitivity to avoid the alarm being triggered by a tree swinging in the breeze.
- **Interval:** Click and move the slider control to the right to increase the interval time so that the alarm will only be triggered when the movement lasts longer. Move to the left to reduce the interval time.

### Region Definition

- **Define detection zone:** To detect **General Motion**, you have to define a detection zone. Left-click and drag the mouse to draw a detection zone. You may define more than one zone on the screen by repeating the same process. You can also click **All** to select the entire detection zone.

Click **Start Simulation** and test the function on the preview window.

### Camera Event - General Motion (Device)

Detect movement with motion detectors of devices (IP cameras or video servers).

Note: This function is only available on network camera with built-in motion detection.

Please refer to the user manual of your network camera to set up motion detection.

#### Start Simulation

Click to test if motion detection is set up correctly.

#### Go to Web Interface

Click to go directly to device web page for General Settings.

## Camera Event - Foreign Object

Alarm will be set off when an object appears in the defined area on the screen.

### Alarm Event Option

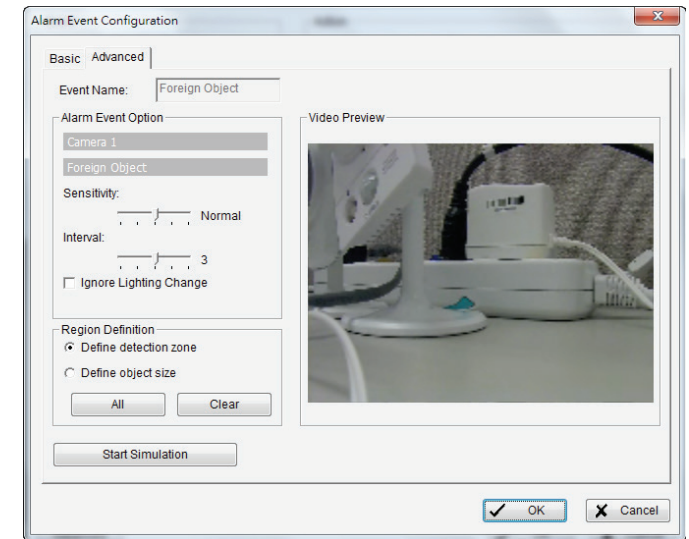

- **Sensitivity:** Click and move the slider control to the right to increase sensitivity so that a relatively small movement will trigger the alarm. Move the bar to the left to reduce sensitivity of motion detection. Setting up an appropriate sensitivity value will reduce the chances of a false alarm. For example, you can lower the sensitivity to avoid the alarm being triggered by a tree swinging in the breeze.
- **Interval:** Click and move the slider control to the right to increase the interval time so that the alarm will only be triggered when the movement lasts longer. Move to the left to reduce the interval time.

### Region Definition

- **Define detection zone:** To detect **Foreign Object**, you have to define a detection zone. Left-click and drag the mouse to draw a detection zone. You may define more than one zone on the screen by repeating the same process. You can also click **All** to select the entire detection zone.
- **Define Object size:** After defining the detection zone, select **Define Object Size** and then left-click and drag the mouse to indicate the size of the object you want to detect.

**Note:** For instance, if you want to prevent somebody from leaving a briefcase in a hallway, place a briefcase in the hallway in view of the camera. On the screen, draw an area that fits the size of the briefcase and define it as the object size. Remove the briefcase and then activate the Smart Guard function on the Main console. The system will consider everything on the screen normal when you click Start to activate the monitor function.

Click **Start Simulation** and test the function on the preview window.

## Camera Event - Missing Object

Alarm triggers when an object disappears in the defined area on the screen.

### Alarm Event Option

- **Sensitivity:** Click and move the slider control to the right to increase sensitivity so that a relatively small movement will trigger the alarm. Move the bar to the left to reduce sensitivity of motion detection. Setting up an appropriate sensitivity value will reduce the chances of a false alarm. For example, you can lower the sensitivity to avoid the alarm being triggered by a tree swinging in the breeze.
- **Interval:** Click and move the slider control to the right to increase the interval time so that the alarm will only be triggered when the movement lasts longer. Move to the left to reduce the interval time.

### Region Definition

- **Define detection zone:** To detect **Missing Object**, you have to define a detection zone. Left-click and drag the mouse to draw a detection zone. You may define more than one zone on the screen by repeating the same process. You can also click **All** to select the entire detection zone.

Click **Start Simulation** and test the function on the preview window.

## Camera Event - Focus Lost

This function alarms you when any of the cameras is losing focus and has a blurry image.

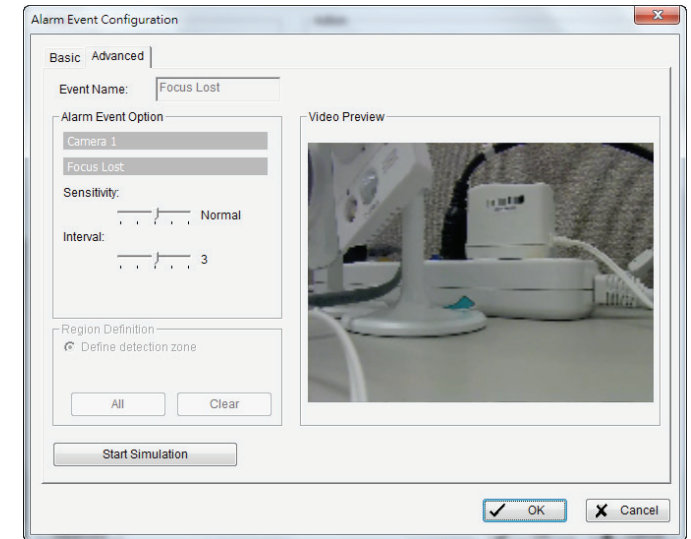

### Alarm Event Option

- **Sensitivity:** Click and move the slider control to the right to increase sensitivity so that a relatively small movement will trigger the alarm. Move the bar to the left to reduce sensitivity of motion detection. Setting up an appropriate sensitivity value will reduce the chances of a false alarm. For example, you can lower the sensitivity to avoid the alarm being triggered by a tree swinging in the breeze.
- **Interval:** Click and move the slider control to the right to increase the interval time so that the alarm will only be triggered when the movement lasts longer. Move to the left to reduce the interval time.
- **Ignore Lighting:** Check the box to avoid alarm being set off by light changing.

### Region Definition

- **Define detection zone:** To detect **Focus Lost**, you have to define a detection zone. Left-click and drag the mouse to draw a detection zone. You may define more than one zone on the screen by repeating the same process. You can also click **All** to select the entire detection zone.

Click **Start Simulation** and test the function on the preview window.

## Camera Event - Camera Occlusion

This function alarms you when any of the cameras are blocked.

### Alarm Event Option

- **Sensitivity:** Click and move the slider control to the right to increase sensitivity so that a relatively small movement will trigger the alarm. Move the bar to the left to reduce sensitivity of motion detection. Setting up an appropriate sensitivity value will reduce the chances of a false alarm. For example, you can lower the sensitivity to avoid the alarm being triggered by a tree swinging in the breeze.
- **Interval:** Click and move the slider control to the right to increase the interval time so that the alarm will only be triggered when the movement lasts longer. Move to the left to reduce the interval time.
- **Ignore Lighting:** Check the box to avoid alarm being set off by light changing.

Click **Start Simulation** and test the function on the preview window.

## Camera Event - Digital Input

**Step 1:** Select to highlight **Digital Input** on the event type list and then click  **Insert Event**.

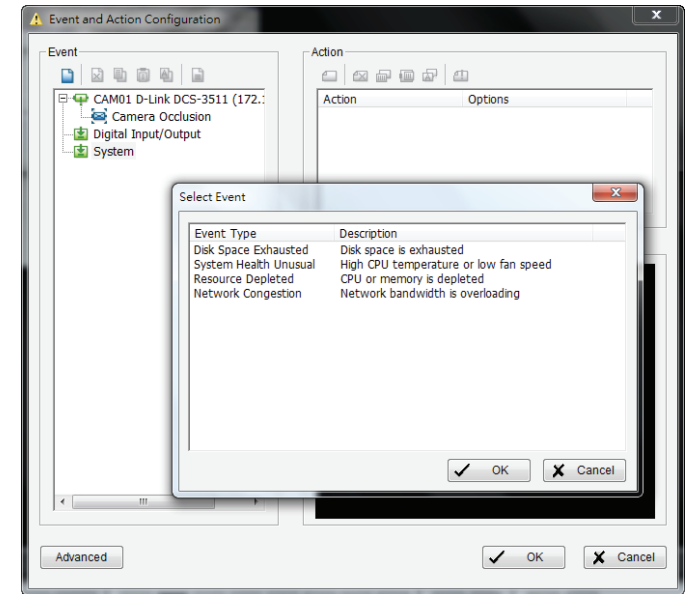

**Step 2:** Select the device that is connected to your camera(s).

## System Event - Assign a System Event

**Step 1:** Click and highlight **System** on the event type list and then click  **Insert Event**.

**Step 2:** There are four events, select the event you want to detect.

## System Event - Disk Space Exhausted

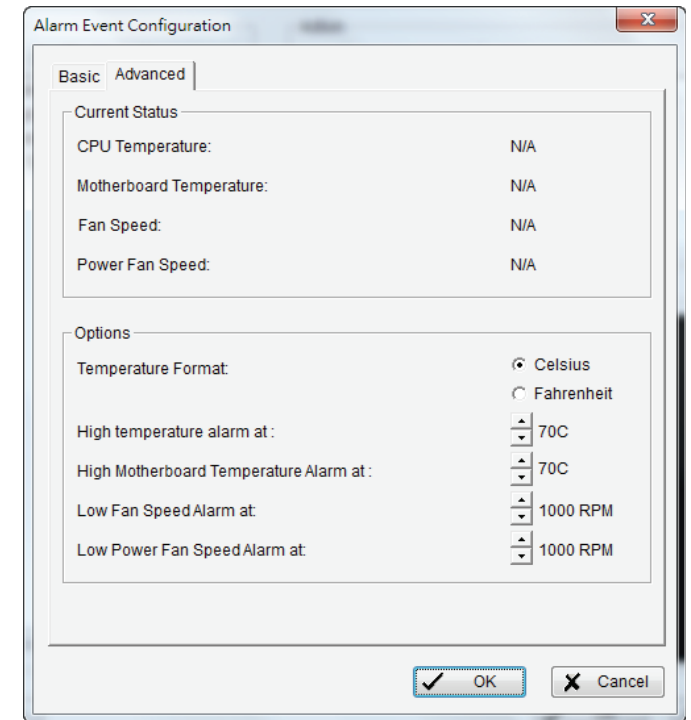

This function alarms you when disk space is exhausted.

## System Event - System Health Unusual

This function alarms you when CPU is under high temperature or fan speeds are running low.

**Current Status:** Displays current CPU temperature, Motherboard Temperature, Fan Speed and Power fan speed.

**Options:** Check the Temperature Format for Celsius or Fahrenheit; fix maximum motherboard temperature for High Temperature Alarm and minimum RPM for Power Fan Speed Alarm.

## System Event - Resource Depleted

This function alarms you when CPU or memory is depleted.

**Current Status:** Shows you the current Total CPU Loading and Total Memory Usage.

**Options:** Fix maximum percentage for High CPU Loading Alarm and High Memory Usage Alarm.

## System Event - Network Congestion

This function alarms you when network bandwidth is overloaded.

**Current Status:** Shows you the current Total Upload/Download bit rates.

**Options:** Fix maximum bit rate (Kbps) for High Upload/Download Bit rate Alarms.

## Action

### Assign an Action Type

**Insert Action:** Select actions that responds to an unusual event.

**Step 1:** Select an event and click  **Insert Action**.

**Step 2:** Select one of the 11 actions and then click **OK**.

1. On Screen Display
2. Play Sound
3. Send E-mail
4. Phone Call
5. PTZ Preset Go
6. DI/DO
7. Send a SMS Message
8. Send to Central Server
9. Send snapshot to FTP
10. Popup E-Map on event.
11. Push Notification

**Step 3:** Configure the **Action Type** if required.

## Action Type > On Screen Display

A red warning will be flashing on the screen of Main console, indicating which type of unusual event is detected.

**Step 1:** Select the “On Screen display” action and then click **OK**.

**Step 2:** The responding window will pop-up to Selected Camera. Click the “On Screen display” indicator to modify the setting.

**Camera:** Display the camera applied to this action.

**Auto popup:** Click the Auto popup column and select the expected monitor for popping up the event.

**Displayed text:** You can follow the default setting to show the event type, or enable “Customized Text” to define the text as your preference.

**Color edge:** Select the color edge for popping up the event

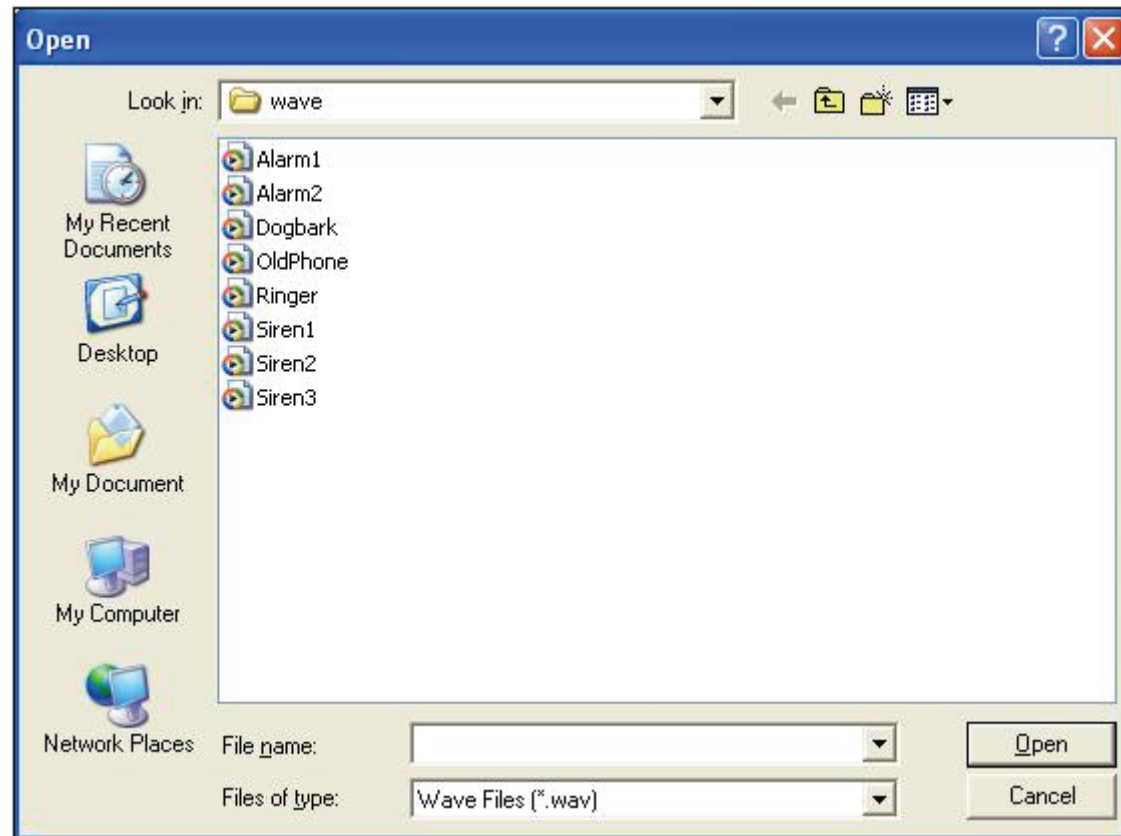

## Action Type > Play Sound

The system will play an audio .wav file when an unusual event is detected.

**Step 1:** Select the **Play Sound** action and then click **OK**.

**Step 2:** Select a wave file (.wav) and then click **Play Sound** to modify the setting.

## Action Type > Send E-mail

When an event is triggered, the system immediately emails the specified recipients. The email contains the type of event, the time it occurred, and a picture of the event.

**Step 1:** Select the **Send E-mail** action and then click **OK**.

**Step 2:** From the **Select Contactor** window select the email address(es) you want to send alerts to.

Click **Edit Address Book** to add, delete, or edit contacts.

## Action Type > Phone Call

The system will call a given phone number when an unusual event is detected.

**Step 1:** Select the **Phone Call** action and then click **OK**.

**Step 2:** The responding window will popup to Select Contactor and key-in the message which want to append on SMS content. (You can choose one more contact at once).

**Note:** To setup the phone number and make an audio record for the phone call, go to **General Setting > Setup > Hotline**.

## Action Type > PTZ Preset Go

Use this to trigger the PTZ (pan/tilt/zoom) camera(s)

**Step 1:** Select the **PTZ Preset Go** action and then click **OK**.

**Step 2:** In the **PTZ Preset Go** window, select the PTZ camera that is connected to your system. Then set the start and end preset points, and select the life cycle for the event. Click **Add** when you are done to add the preset to the table below. You may repeat this step to add another preset.

**Step 3:** When you are finished adding your presets, click **OK**.

PTZ Camera Preset Go

Camera: CAM02 (D-Link DCS-52) IP Camera

Start

Preset  Patrol

Life Cycle

Stop PTZ action when event disappear

Keep PTZ action 10 second

End

Preset  Patrol

The end preset go will take 10 second

Add Clear Update Delete

Camera	Start	Life Cycle	End	End Preset Go

OK Cancel

## Action Type > DI/DO

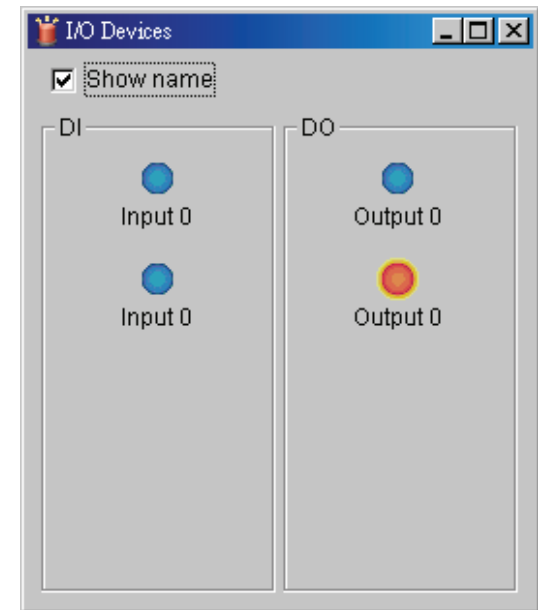

Use this to trigger the Digital Input/Output devices that are connected to the camera(s), such as alarm lights or sirens.

**Step 1:** Select the **DI/DO** action and then click **OK**.

**Step 2:** Select **Digital Input Module** and then click the **DI/DO** indicator to modify the setting.

**Step 3:** Select the device that is connected to your system. Enable **Automatically popup I/O control panel** to monitor the I/O status.

You must adjust the setting of I/O device in **General Setting > Setting > I/O Device** first and the I/O control will display the device status based on this setting. You can also adjust the size of the window by clicking  on the display window.

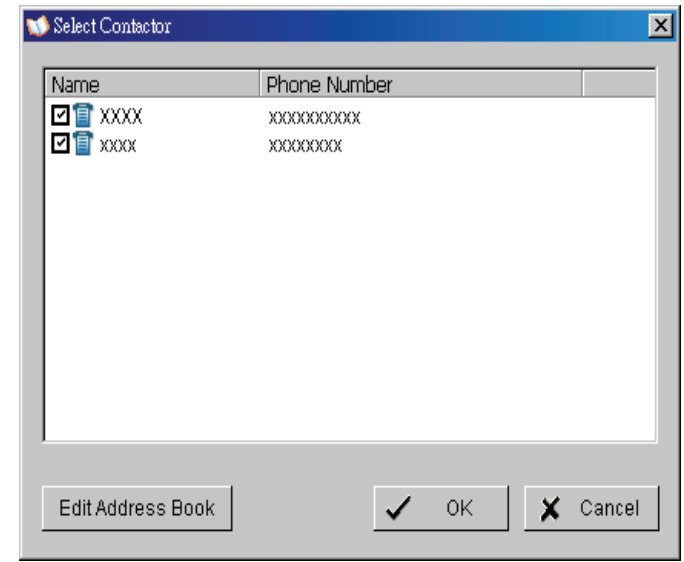

## Action Type > Send a SMS

The system will immediately send an SMS to the user indicating the type of event, and the time.

**Step 1:** Select the **Send a SMS message** action and then click **OK**.

**Step 2:** The **Select Contactor** window will display. Here you can choose one or more contacts at once.

**Edit Address Book:** Click to enter the contact information. This is similar to the **Send E-mail** and **Phone Call** action.

## Action Type > Send to Central Server

This action will send an event and snapshot to the Central Management Server (separate software package, not included).

**Step 1:** Select the **“Send to Central Server”** action and then click **OK**.

## Action Type > Send snapshots to FTP

The system will upload a snapshot immediately to FTP site.

**Step 1:** Select the “**Send snapshot to FTP**” action and then click **OK**.

**Step 2:** General Setting options.

**Life Cycle:** General Setting the system to stop sending snapshots after \_\_\_ seconds, or when the event is terminated.

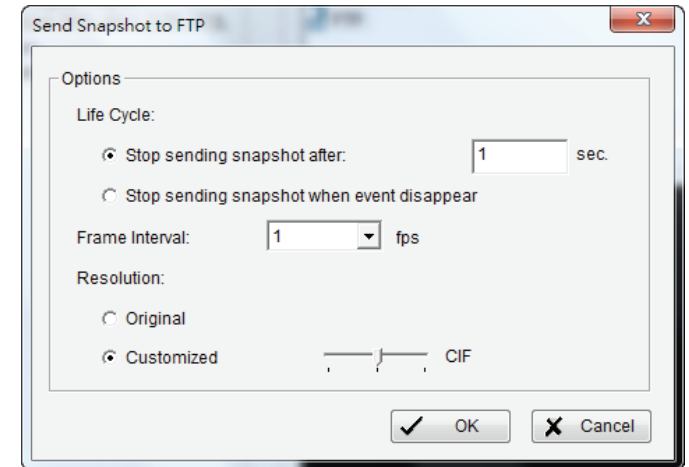

**Frame Interval:** Define the frequency of snapshots.

- Minimum is 1/60 fps (1 snapshot per 60 seconds)
- Maximum is 30fps (30 snapshots per second).

**Resolution:** Choose to keep snapshot in original resolution or compress to lower resolution.

**Note:**

1. For Digital Input Events, this warning action will send the snapshot of the associated camera.
2. To define an FTP server, go to **General Setting > Setup > Hotline**.

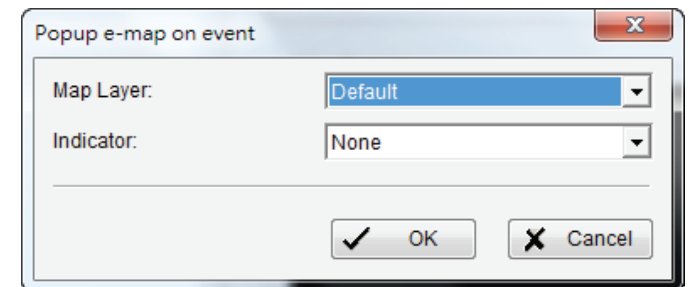

## Action Type > Popup E-Map on Event

The system will auto popup E-Map window and show the assigned map and indicator.

**Step 1:** Select the “**Popup E-Map on Event**” action and then click **OK**.

**Step 2:** The responding window will pop-up to Popup e-map on event. Click the “**Popup E-Map on Event**” indicator to modify the setting.

**Step 3:** Select the **Map Layer** and **Indicator**, and then click **OK**.

## Action Type > Push Notification

The system will send instant message to registered D-ViewCam mobile APP as a notification.

**Step 1:** Select the “**Notice on Mobile Client**” action and then click **OK**.

**Step 2:** General Setting options.

**Frequency—Rearm interval:** the minimum interval of notifications as the event occurs. (default:10, max:300)

**User List:** All user accounts in this unit. Click “**select all**” to select all user accounts; click “**deselect all**” to remove all user accounts.

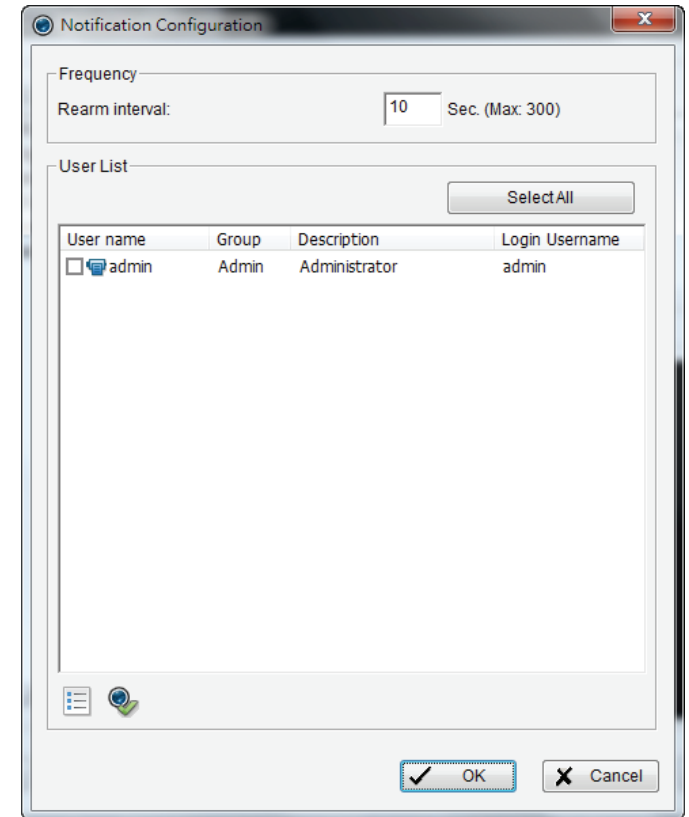

**Receiver List (overview/remove):** go to **General setting>Network Service>Push Notification** for user account overview. Click “**Kill**” for selected user account delete and “**Kill All**” for all user accounts delete.

1. **User name:** user account
2. **ID:** user account display name
3. **Least time:** indicate user did not login period
4. **Login Username:** the user account display name when login

**Send test:** click to send test push notification to selected list.

### Note:

1. Please sign in D-ViewCam mobile APP first.
2. If the user password is changed, please sign in D-ViewCam mobile APP with the new password to start the service again.
3. If users do not want to receive notifications anymore, users can turn off this feature on D-ViewCam mobile APP. There is one possibility of de-registering failed: users have ever logged in to D-ViewCam mobile APP by typing both LAN IP and WAN IP of Main Console, but only do de-registering on one side.
4. If users do not want to send notifications to certain user account, users can de-select the user account on **Notification General Setting>>Network Service**.
5. If user does not login till 30 days, user account on push notification user list will delete automatically.
6. Push notification test is depending on iOS/Android receive the message or not.

# E-Map

To launch E-Map, click **Start** and select **Open E-Map** from the start menu.

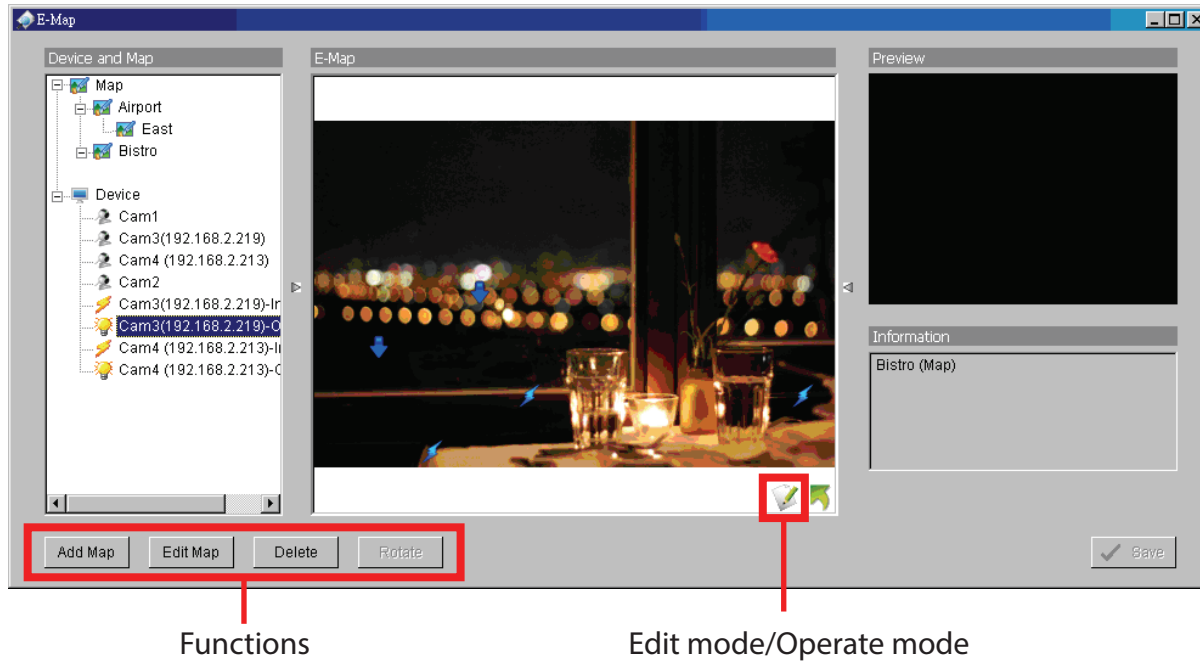

With E-Map, users can track the actual location and alarm status for each camera and receive instant response when the event happens. The arrows and lightning icon on E-Map represent cameras and I/O devices. These icons will turn red once they are triggered by alarms.

There are 2 modes in E-Map application:

**Edit mode:** Allows users to add/edit maps of devices.

**Operate mode:** All settings will be activated in this mode.

## Edit Mode

In **Edit** mode, the icons at the bottom of the window will be active for configuration when running the E-map function for the first time.

## Add/Edit/Delete Map

### Add E-Map

**Step 1:** Make sure you are in **Edit Mode** and all devices are connected.

**Step 2:** Click **Add Map** to load a map image.

**Step 3:** Select the map file and insert the map name. Click **OK**, and the map you added appears in the device and map list.

**Step 4:** The map indicator appears on the left-up corner of the parent map. Drag it to the position you want on the map.

### Edit E-Map

**Step 1:** Make sure you are in **Edit Mode** and all devices are connected.

**Step 2:** Right-click on **Map**  to view the option menu to edit map, or just click **Edit Map** to open **Map Config**.

**Step 3:** Modify the details and then click **OK** to save configuration.

### Delete E-Map

**Step 1:** Make sure you are in **Edit Mode** and all devices are connected.

**Step 2:** Right-click on **Map**  to open the option menu to delete map, or just click **Delete** to remove the map from the list.

**Note:** The root map cannot be deleted.

### Add/Rotate/Delete Device Indicator

#### Add Indicator

**Step 1:** Make sure you are in **Edit Mode** and all devices are connected.

**Step 2:** Select the Map  icon to add the device indicator.

**Step 3:** Before adding the indicator, ensure that the map you want is displayed. Select device from the list and directly drag a device to the desired location on the map.

**Note:** Different device symbolizes different indicator.

 Camera indicator  - digital Input indicator

### Rotate Indicator

**Step 1:** Make sure you are in **Edit Mode** and all devices are connected. Select the device indicator from the Device and Map list. The device indicator will be marked with a green circle .

**Step 2:** Click **Rotate**, the indicator will rotate 45 degrees.

**Note:** Only camera indicators are allowed to be rotated.

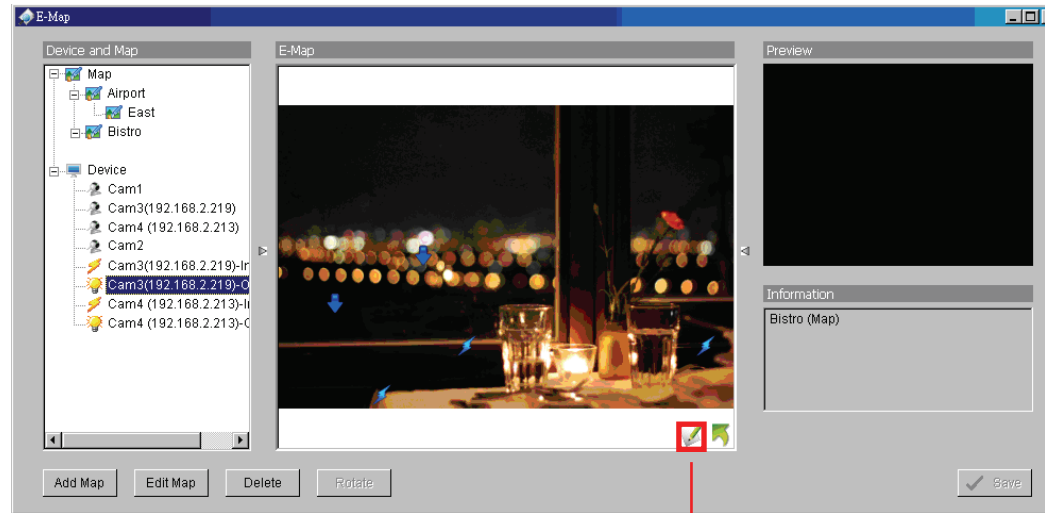

### Delete Indicator

**Step 1:** Make sure you are in Edit Mode and all devices are connected. Select the device indicator from the Device and Map list. The device indicator will be marked with a green circle .

**Step 2:** Click **Delete**.

## Operate Mode

Operate Mode/Edit Mode

### Device and Map Tree list

This window will list all the devices and map hierarchies. Click the **Device** or **Map** indicator to show related information in the E-Map window.

## E-Map

This window displays the map layers and indicators.

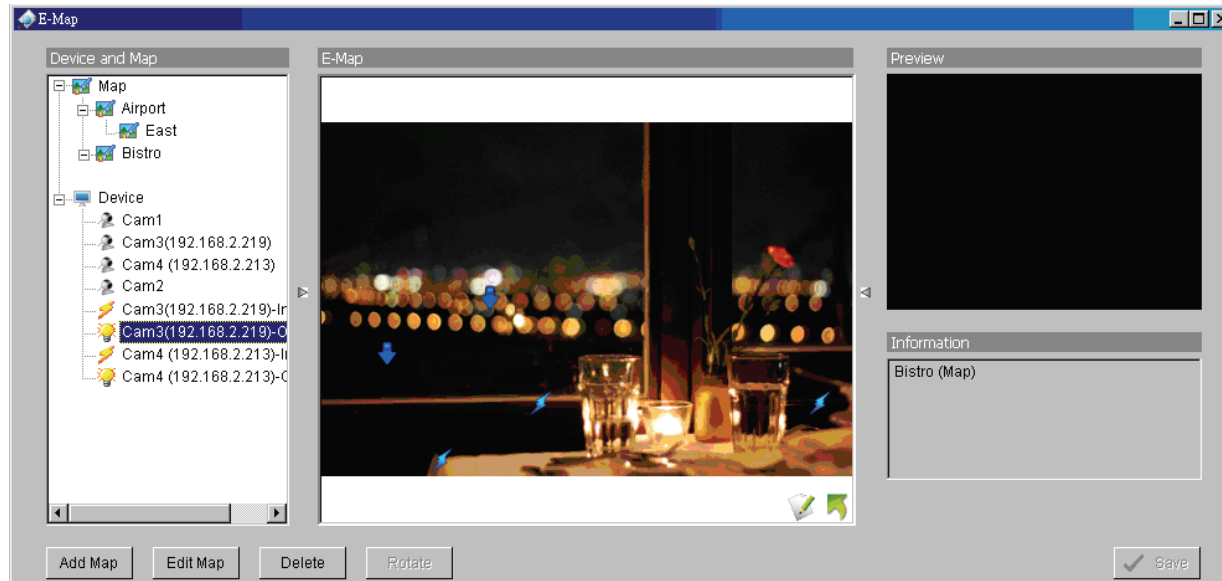

**Device Indicator:** Select the device indicator from **Device** and **Map Tree** list to preview video and related information.

**Map Indicator:** Select to enter the map layer. If you want to move to the upper layer, right click on the map to select **Up** or click  on the map.

### Information and Preview window

	Map Info	Displays map name.
	Camera	Displays camera name and connection status.
	Digital Input	Displays digital input name and status (0 or 1).
	Digital Output	Displays digital output name and status (0 or 1).

## Layout Adjustment

### Adjust layout Window

#### Shrink the window:

Click the triangular indicators   to hide the device and information windows. Click the triangular indicator again to go back to the default setting.

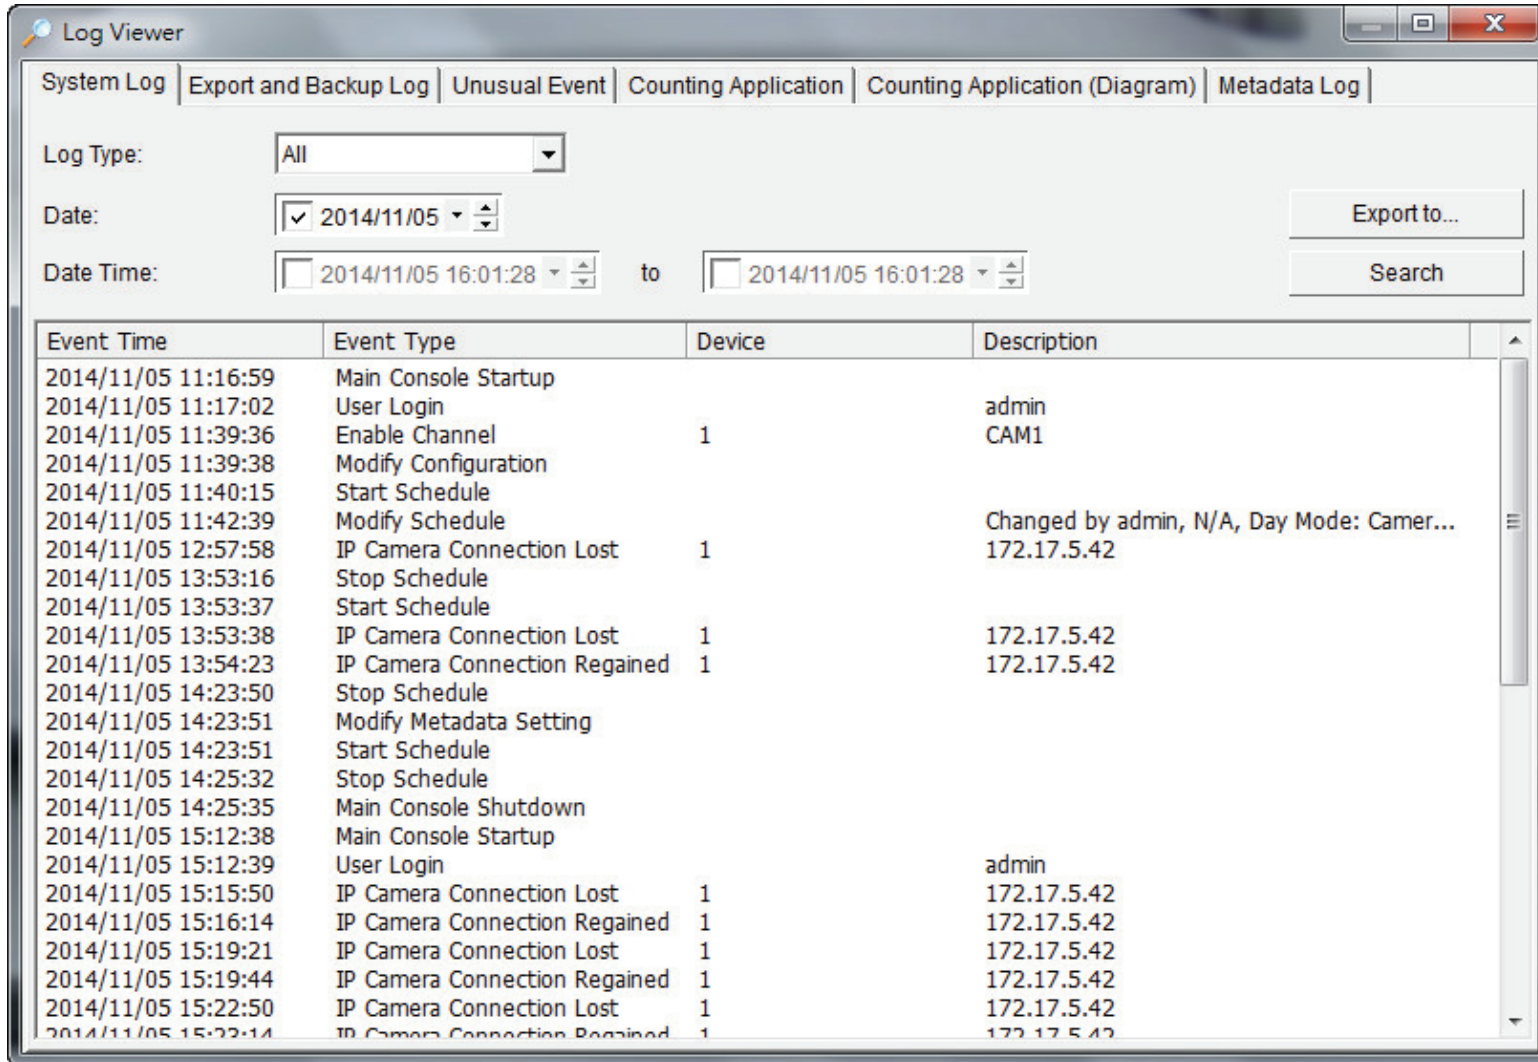

#### Full screen display:

For a computer system with dual monitors, you can view the Main Console on primary monitor and view full-size E-Map on a secondary monitor.

**Step 1:** Click the triangular indicators   to hide the device and information windows on the right and left side.

**Step 2:** Click  located on the upper-right side of the window to switch to fullscreen mode.

# Log Viewer

The screenshot shows the Log Viewer application window with the following settings and data:

- System Log** | Export and Backup Log | Unusual Event | Counting Application | Counting Application (Diagram) | Metadata Log

## Export and Backup Log

View the Export and Backup Log history that had been operated by local or remote user.

**Step 1:** Choose the type of event you want to check or select All from the drop-down menu for all types of events.

**Step 2:** View the events that happened on a particular date or during a given time period by selecting search period.

For a particular data: check the Date box right and indicate the date.

For a period: check the Date Time and then enter the date and time.

**Step 3:** Click Search

## Unusual Event

**Step 1:** Select the type of event you wish to view or select **All** from the drop-down menu to view all types of events. The types include **General Motion, Signal Lost, and Digital Input Triggered**.

**Step 2:** Select the camera channel you wish to view or select **All** for all available channels.

**Step 3:** View the events that happened on a particular date or during a given time period by selecting a search period.

**For a particular data:** Check the "Date" box and select the date you want to view.

**For a period:** Check the "Date&Time" box and then enter the date and time.

**Step 4:** Click **Search**.

## Export

After you search the log you want, you can export it to an Excel (.xls) or a text (.txt) file.

.txt

**Step 1:** Click the **Export To** button.

**Step 2:** Type the file name and select the file format (.xls or .txt).

## Counting Application

Display the history of Counting Application during a given time period.

**Step 1:** Select the channel you want to check or select All from the drop-down menu for all channels.

**Step 2:** Select search period. View the events that happened on a particular date or during a given time period by selecting search period.

**For a particular date:** check the Date box right and indicate the date.

**For a period:** check the Date Time and then enter the date and time.

**Step 3:** Click Search.

**Step 4:** Press the button Export to.

**Step 5:** Type the file name and choose the file format (.xls or .txt).

## Counting Application (Diagram)

Display the Counting Application data in diagram format.

**Step 1:** Select the channel you want to check or select All from the drop-down menu for all channels.

**Step 2:** From the drop-down menu, set up how you would like the diagram to be displayed. You have the options of one day, one month, or one year.

**Step 3:** Select a specific date to make it the start point of the diagram.

**Step 4:** Click Search.

**Step 5:** Press the button Export to.

**Step 6:** Type the file name and the file will save as BMP files.

## Metadata Log

View the Metadata Log history detected by the Smart Guard System.

**Step 1:** Choose the type of events you wish to view or select All from the drop-down menu to view all types of events. The types of Unusual Event include Transaction Start, Transaction End, Open Cash Register, Connection Lost, and special User defined event.

**Step 2:** Choose the camera channel you wish to view or select All for all the channels available.

**Step 3:** View the events that happened on a particular date or during a given time period by selecting search period.

**For a particular date:** check the Date box right and indicate the date.

**For a period:** check the Date Time and then enter the date and time.

**Step 4:** Click Search. A link ( ) will appear next to each event time where video is available. By clicking on the link, an instant playback window will pop up to show recorded video

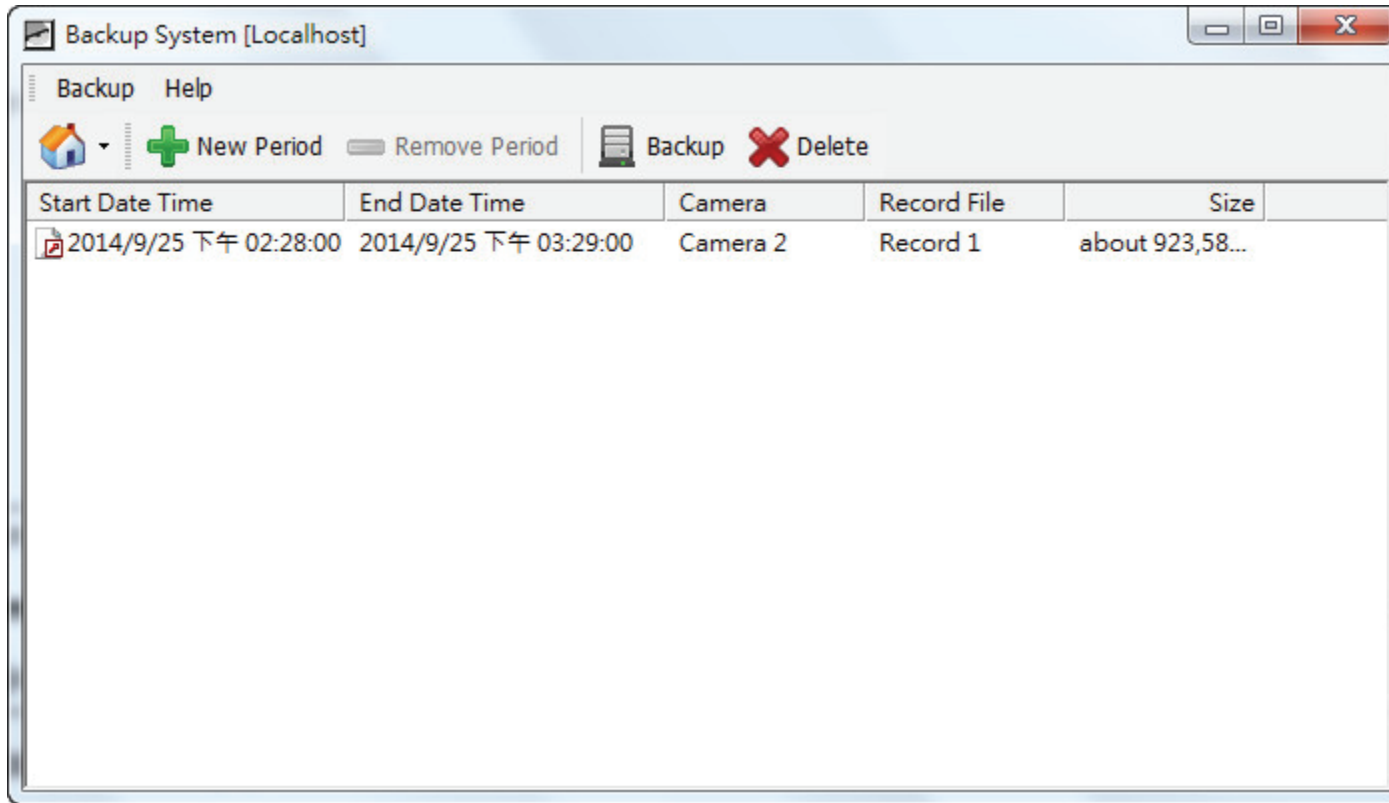

**Step 5:** Press the button Export to.

**Step 6:** Type the file name and choose the file format (.xls or .txt).

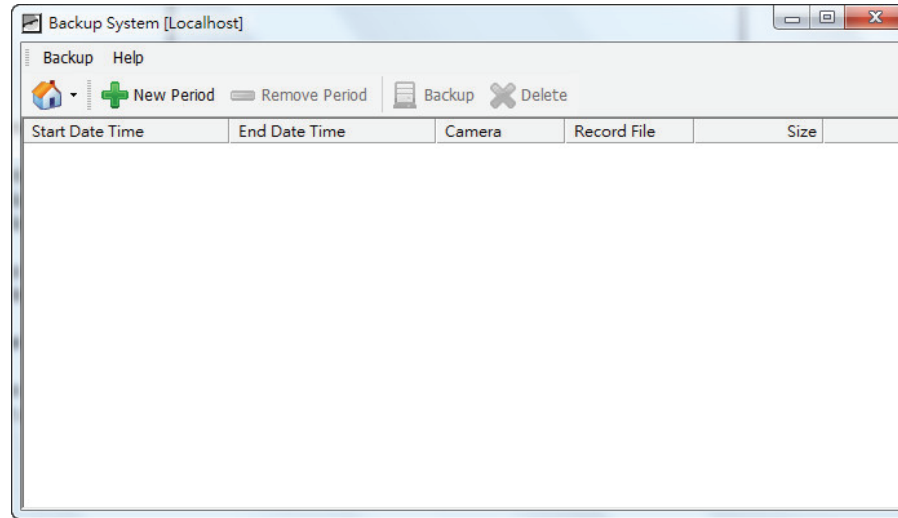

# Backup

The backup function saves video records and other log information.

**Note:** The backup cannot exceed 7 days of recordings.

## Back up Recorded File(s)

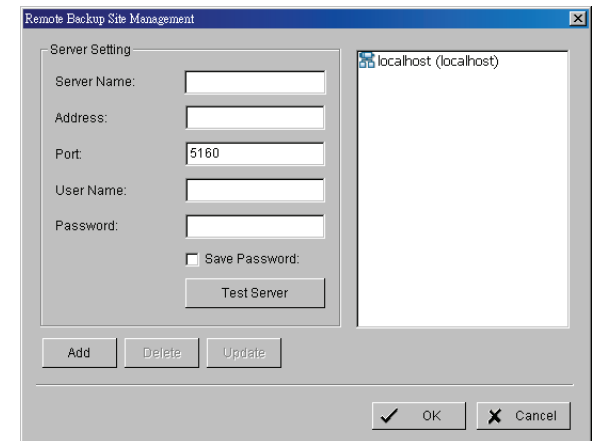

**Step 1:** Click **Remote Server**  to add a backup site.

- Enter the **Server Name, Address, Port, Username, and Password.**
- Click **Add** to add the server.
- Click **OK** to exit the Setting window.

**Step 2:** To access the **Remote Backup Site**, click  and enter the username/password of the remote server to access the backup site.

**Step 3:** Click **New Period** to open **Select DateTime Period.**

**Step 4:** Select the data you want to back up by highlighting the time period. You may also set up a start and end time in the Date Time Period section.

**Step 5:** Click on the camera number icon to add camera(s) or click   to add/delete all channels.

**Step 6:** Select **Enable Preview** to display the preview of the video you selected.

**Step 7:** Click **OK** when the settings are complete.

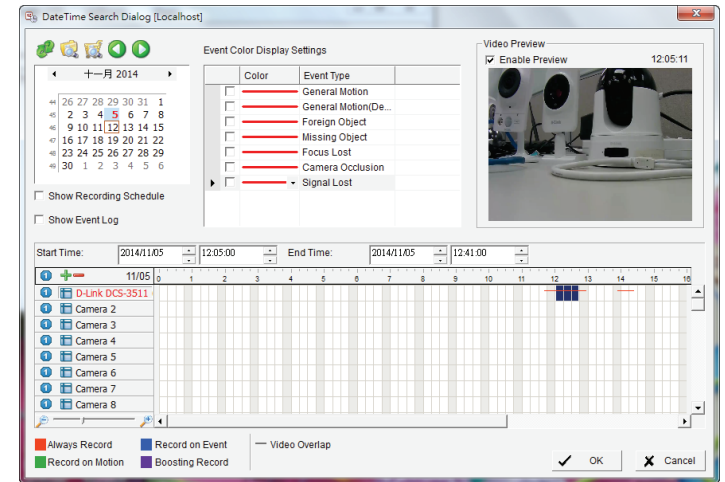

**Step 8:** Click **Remove Period** to remove data from the backup list.

**Step 9:** Click the **Backup** icon to open the Backup window.

**Step 10:** Under **Media**, select the path you want to save the file or burn the file directly to a CD (direct CD burning for Windows® XP only), DVD or to a hard drive.

**Step 11:** Under **Option**, select the log information you would like to back up (Event Log, System Log, Counter Log, or Metadata Transaction), and then click **OK**.

**Note:** The backup cannot exceed 7 days of recordings.

## Delete Recorded File(s)

**Step 1:** Click **New Period** to open **Select Date Time Period**.

**Step 2:** Follow steps 3-7 from the previous two pages to select the data period which you want to delete.

**Step 3:** Click on the **Delete** icon to remove all the data in the backup list from the database.

**Note:** The deleted video cannot be recovered.

# Remote Live Viewer

With the Remote Live Viewer software, remote users may watch real-time video channel per server from remote live streaming servers

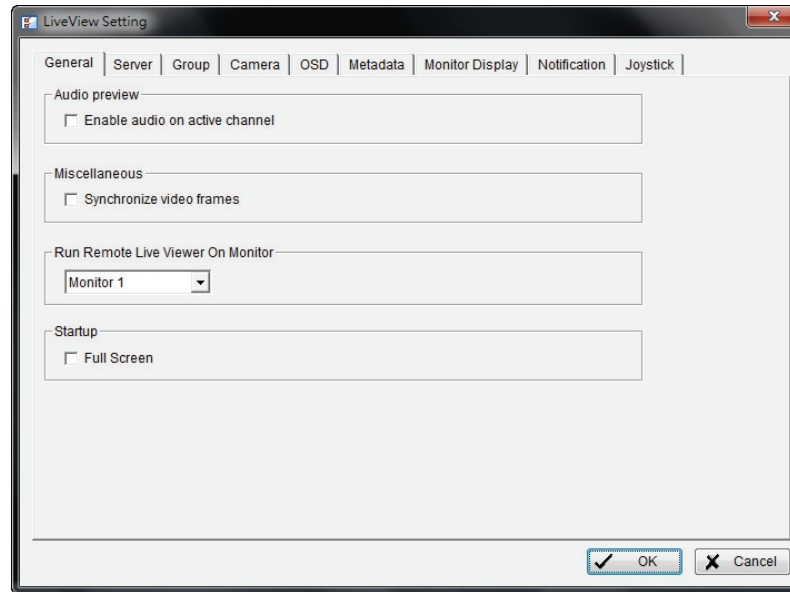

## Setting

Click the **General Settings** icon in the Main Console to open the Settings window.

### General Setting

#### Audio Preview

Enable audio on active channel: Select to enable the audio streaming on active channel.

#### Miscellaneous

Select to prevent tearing that may occur in the video display. However, this will increase the CPU processing load.

#### Run Remote Live Viewer on Monitor

Select monitor to display Remote Live Viewer.

#### Startup

Full screen: Users can view the window as the full screen mode

## Server Setting

**Step 1:** Enter the Server Name as preference.

**Step 2:** Enter the IP address, Port, User Name, Password to log in to the server.

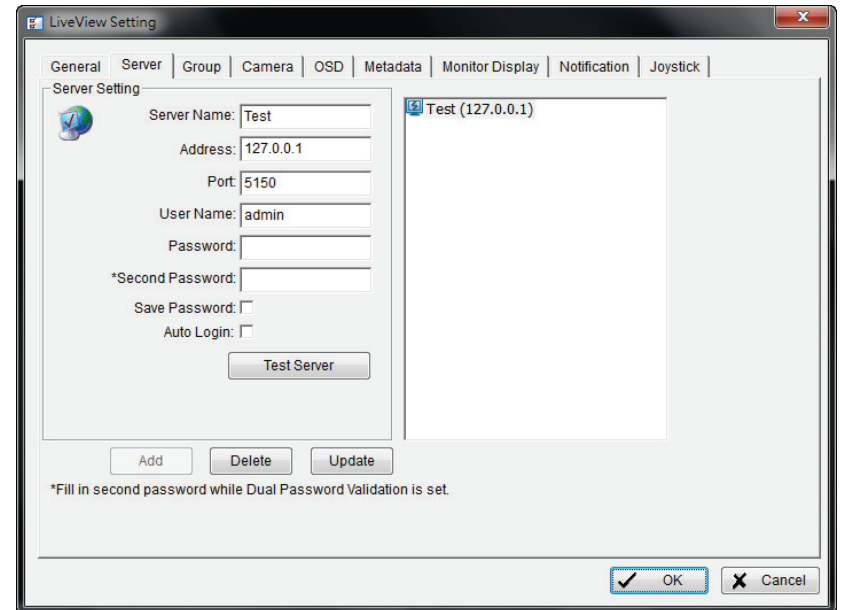

**Step 3:** Enable **Save Password** to login without entering the password again.

**Step 4:** Enable **Auto Login** to login automatically when starting the Remote Live Viewer.

**Step 5:** Click **Test Server** to check if the server is available.

**Step 6:** Click **Add** to insert the setting to server list.

**Note:** To remove the server, select a server in the server list and then click **Delete**.

## Group Setting

Allocate different cameras into groups.

**Step 1:** Log in to all the servers that contain camera(s) you would like to add into the group(s).

**Step 2:** Click **Insert** to create and name a new group.

**Step 3:** Highlight the camera that you would like to add to a group and then click on <-- . Repeat the process until all the cameras you want in the group are added.

**Step 4:** Click **Delete** to remove a specific group or click **Rename** to change the name of a specific group.

**Step 5:** Click **OK** to save your group.

## Camera Setting

Select the preferred stream type of each camera as default live view profile

**Stream profile:** Select a layout type and choose which stream profile you would like to apply on this layout.

For some layout with large and small grid, you are able to assign different stream profile.

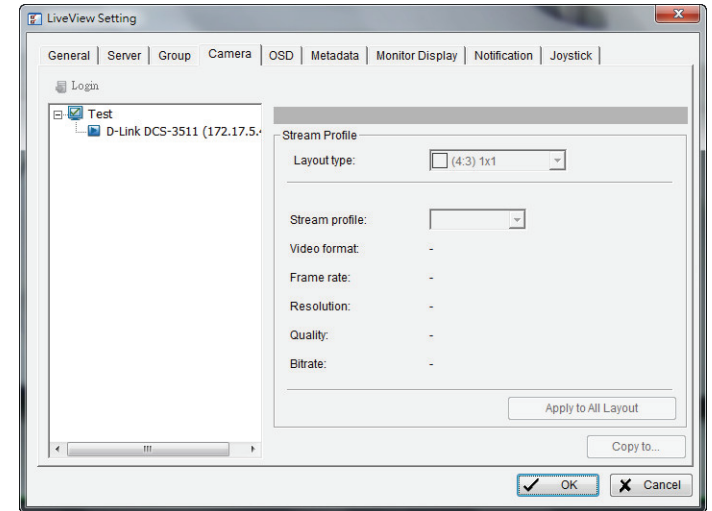

**Record 1:** The system will follow the stream profile set in **main console > Schedule > Configuration**.

**Record 2:** The system will follow the stream profile set in **main console > Schedule > Configuration**.

**Main / High / Normal / Low / Minimum:** The system will follow the stream profile set in **main console > Schedule > Configuration**.

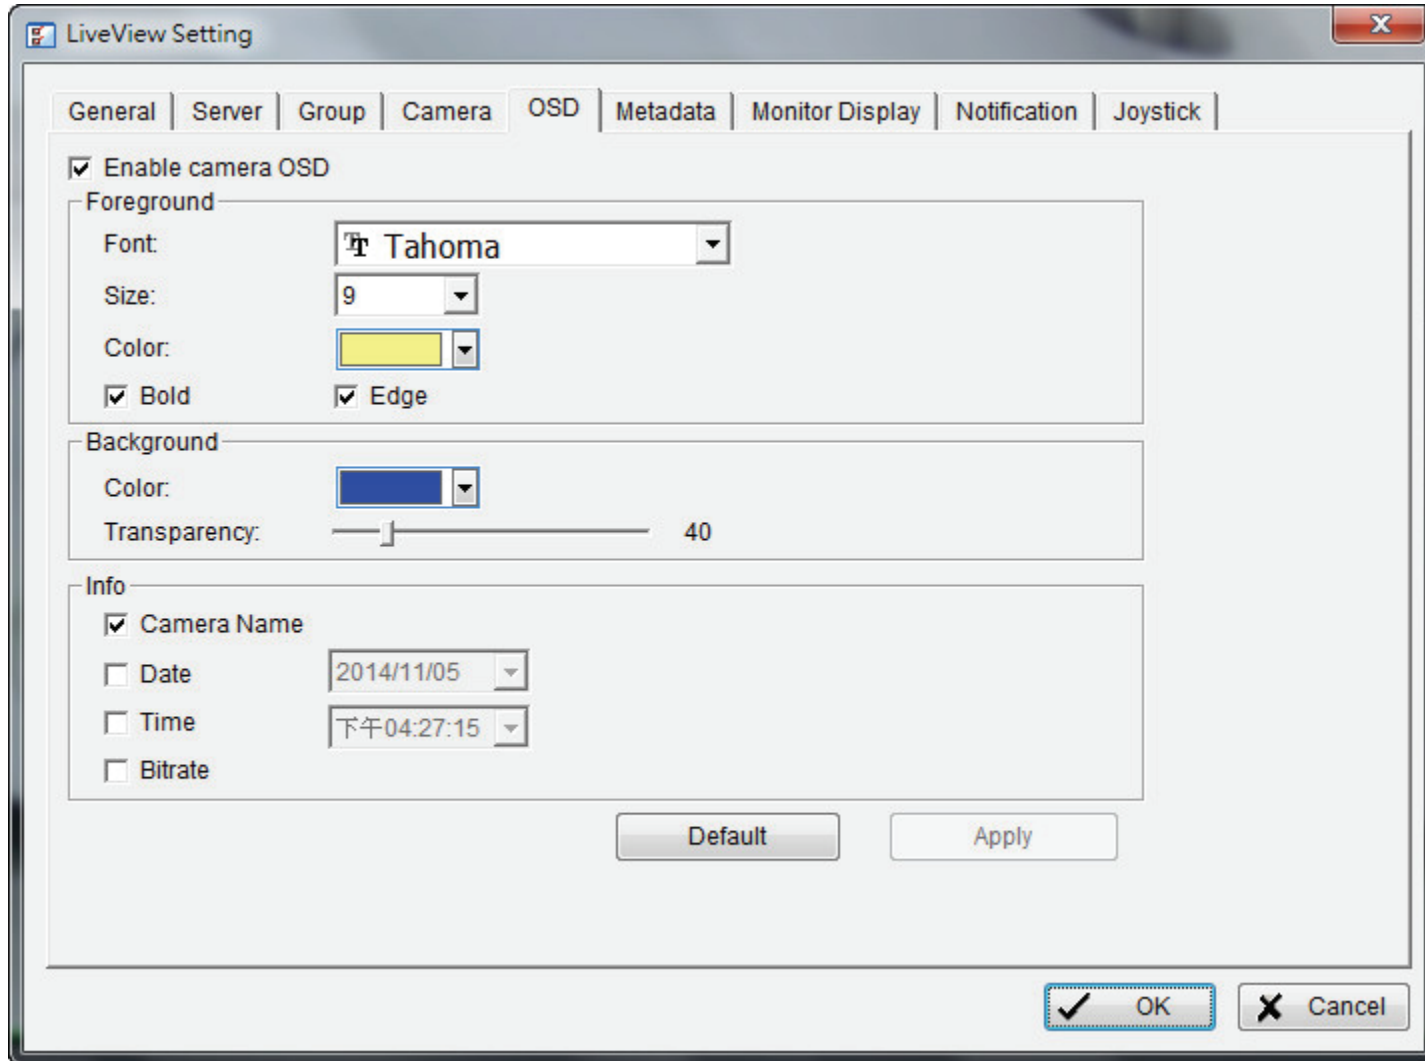

**Apply to All Layout:** Apply the stream profile setting of current layout to the other layouts.

**Copy to:** Select in order to copy the preferred stream profile of a channel to all of the listed channels

## OSD Setting

Select the font style and color for the information displayed on the video.

## Metadata Setting

Select the font style and color for the Metadata overlay on the panel.

## Monitor Display Setting

Activate auto scan to rotate the channels/cameras on the display window. For instance, you may select to show only 4 sub-screens on the live viewer while having 16 channels connected to the system.

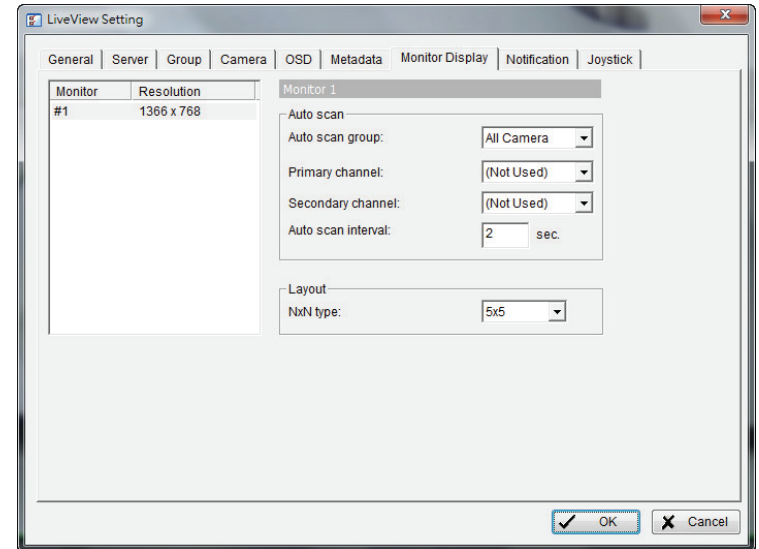

**Step 1:** Select the monitor connected to the system.

**Step 2:** From the **Auto scan group** drop-down, select a group.

**Step 3:** Select a primary channel that will always be on the screen when activating auto scan settings.

**Step 4:** Select a channel that has secondary priority then primary channel on the display screen when activating auto scan settings.

**Step 5:** From the **Layout** drop-down, select the screen division you want to display.

## Notification Settings

### Status display

**Show recording status:** Check to show the crystal ball with recording status on monitor display.

**Show camera event:** Check to show the smart guard detected event appointed in main console on each channel.

**Note:** To execute this function, please General Setting “on screen display” as an action of Smart Guard instant response.

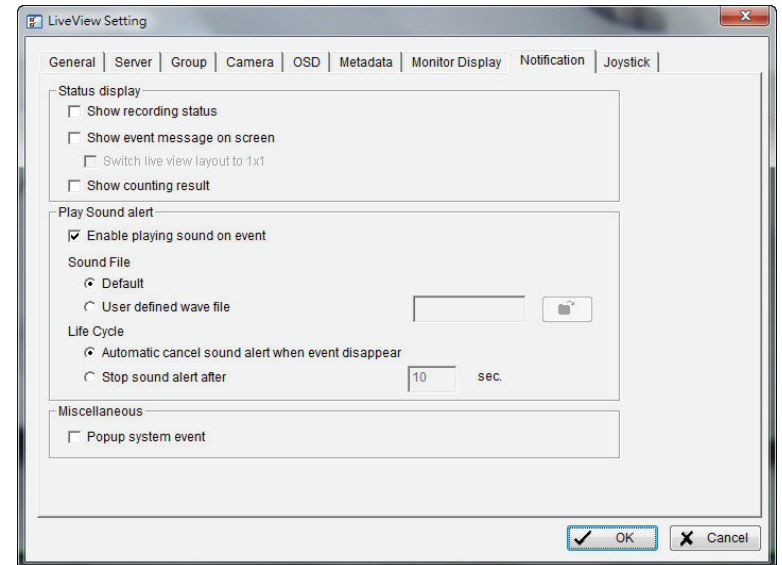

**Switch live view layout to 1x1:** Check to switch the display layout to 1x1 when smart guard detected event appointed in Mainconsole on each channel.

**Play sound alert:** Enable playing sound on event: Check to enable sound alerts on events.

**Sound File:** Choose a sound file to play. You may use the default file or define another.

**Life Cycle:** Choose to allow the sound alert to close when events disappear, or define a timer to close the sound alert automatically after a specific period of time.

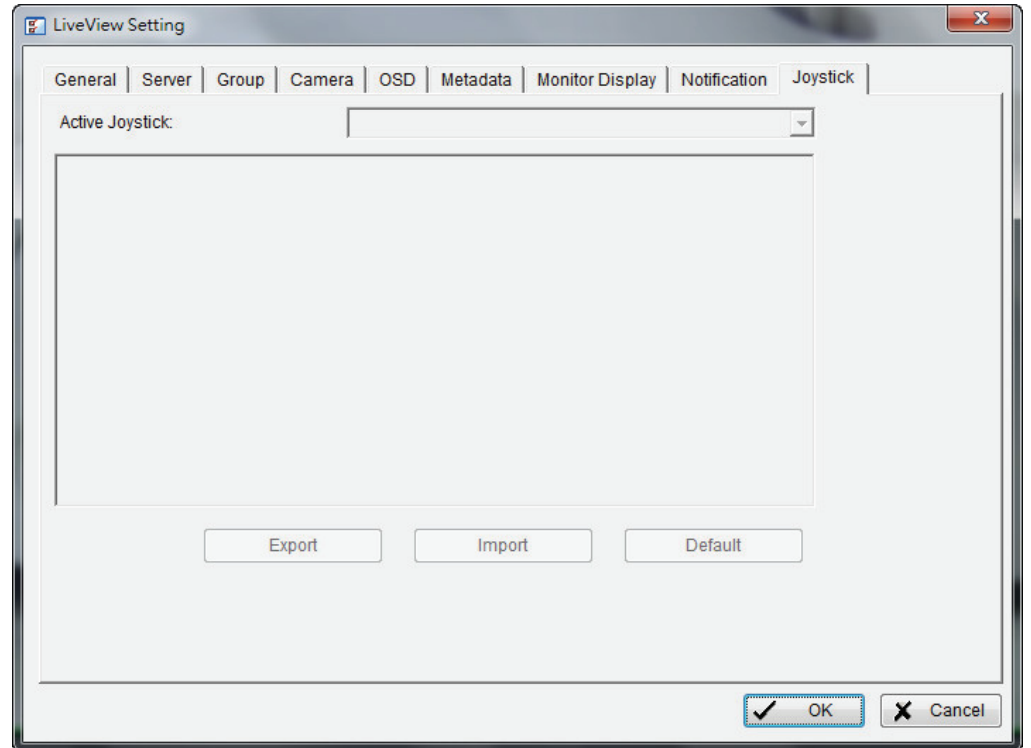

**Note:** To execute this function, please General Setting “play sound” as an action of Smart Guard instant response.

## Joystick Settings

Settings are same to Main console joystick settings. For details please refer to page 53.

## Server/Group/Camera

Display a complete list of the server(s), group(s), and camera(s) that are added to the system.

**Server View:** Click  icon to display cameras sorted by servers.

**Group View:** Click  icon to display cameras sorted by group names.

Server View

Group View

## Login/Logout Server

**Option 1:** Select a server on the list and then click on the  **Log In** icon to access or the  **Log Out** icon to leave the server.

**Option 2:** On the server list, right-click to open the menu options.

**Log In/Log Out Server**

## Connect/Disconnect Camera

**Option 1:** On the server/camera list, double-click on a camera to connect it.

**Option 2:** On the server/camera list, right-click on a camera to open the menu options to connect/disconnect.

**Connect/Disconnect Camera**

**Option 3:** Select a camera from the list and drag it to where you want the image to be displayed.

**Option 4: Play / Stop / Drop:** Select a camera/video and click this button to play/stop/disconnect a particular channel.

## PTZ Control

Control the movement of PTZ cameras. With cameras that support PTZ control, you can move, zoom, patrol, adjust the focus, and set preset points of the cameras.

### Preset/Go

Adjust the camera view and click on the **Set** icon and save the view as preset point 01. Adjust the camera view again and set the preset point 02. Repeat the process until you finish setting up all the preset points. Enter a name instead of preset point 01. Click on the **Go** icon to view the preset points.

**Note:** To change the speed settings of your PTZ camera, click on **Main Console > General Setting > Setting > PTZ Config**.

### Zoom

Click on the + and – signs to zoom in and zoom out the view.

### Focus

To focus near means objects that are closer will be clearer than the objects that are further away. On contrast, to focus far means objects that are further will be clearer than the objects that are closer. Click on the **Focus** icon and select auto focus if you want the system to decide the focus point for you.

### Patrol

To have your PTZ camera to patrol around pre-defined path of preset points, please click **Patrol** to start/stop patrol.

**Note:** To setup a patrol path, please go to **Main Console > General Setting > Setting > PTZ Config > Patrol**.

## On Screen Menu

Right-click on the camera screen and get the “On Screen Menu”, from which you can quickly adjust the setting of camera.

### Enable Talk

With cameras that support two-way audio, select **Enable Talk** to utilize the function

### Enable Audio

Select this option to enable the audio transmission along with video stream

### Enable Digital PTZ

To enable the PTZ functions of the camera, select the Enable Digital PTZ option. Use the mouse wheel or click on the + and – signs to zoom in and zoom out on the camera. The square flashing on the video grid indicates the correspondent view of the camera.

### Enable Move

With cameras that support PT function, click the **Enable Move** function to adjust the current camera’s view by clicking on the display screen. To cancel this function, right Click the screen and select **Disable Move**. With cameras that support Area Zoom function, click the **Enable Move/Area Zoom** function to adjust the current camera’s view by dragging a rectangle on the display screen. To cancel this function, right Click the screen and select **Disable Move/Area Zoom**.

### Fix Aspect Ratio

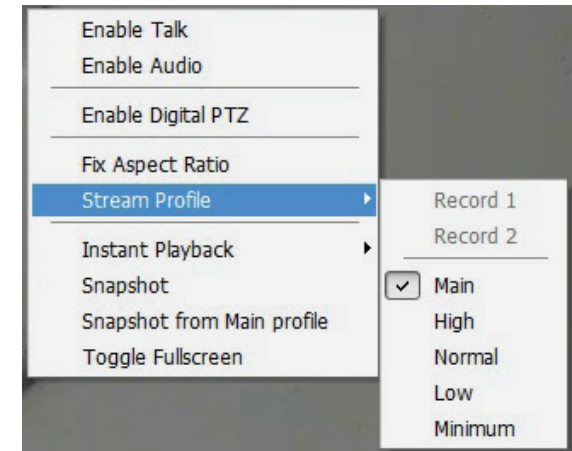

For some special camera resolution, user can enable **Fix Aspect Ratio** to view original ratio video, or disable this option to stretch 3:4 to fit window.

### Stream Profile

Select different level **Stream Profiles** to downgrade video quality for bandwidth concerns.

### Instant Playback

Instant Playback function allows you to play the last few minutes of any live video channel. Simply right click **Live Channel** and select **Instant Playback** to access the recorded video.

## Snapshot

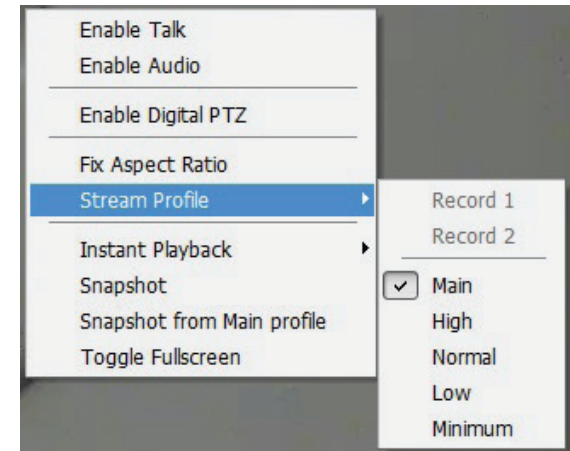

The snapshot function captures a specific video image to the clipboard or to a file you can save to your computer.

### Snapshot from Main Profile

Select the snapshot function to capture a specific video image frame from the camera main profile immediately. You have the options to copy the image to clipboard or to save it

### Toggle Fullscreen

Switch to view video with full screen display. To disable the function, right-click on screen and uncheck this option or simply press **ESC** to go back to original window.

## Playback

Select to open the Playback console and view video remotely.

### Add Remote Playback Site

Click the **Remote Sever** icon  to open the remote playback site management, and to add and setup the remote playback site.

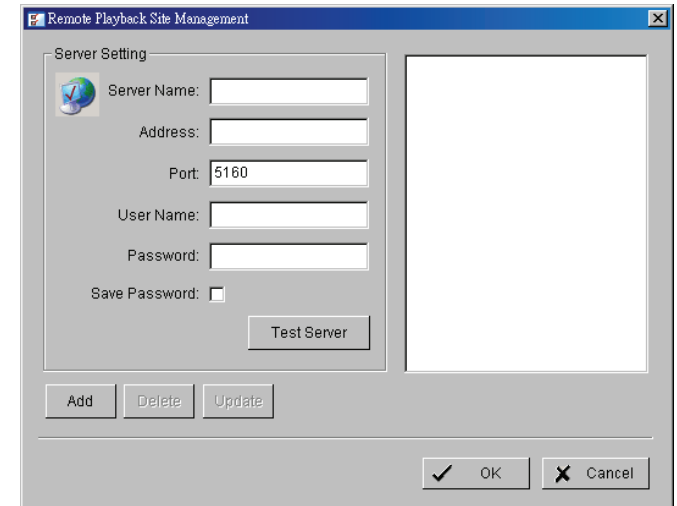

**Step 1:** Enter the **IP address**, **Port**, **Username**, and **Password**.

**Step 2:** Click **Add** to add the server.

**Step 3:** Click **OK** to exit the **Setting** window.

### Access Remote Playback Site

Go to **Date/Time** and click  on the top of the display window to access the Remote Playback Site.

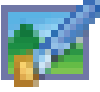

## Start Monitor

Open E-Map  
Open I/O Control Panel

### E-Map

Select **Open E-Map** to open the E-Map window.

	Map	Select the map you want to show on E-Map Window.
	Camera	Select the camera you want to preview video and mark an indicator on E-map.
	Digital Input	Select to highlight the device with a green circle on the map and show status on the Information window. If the Digital Input is from a network camera, the preview window will display live video from the camera.
	Digital Output	Select to highlight the device with a green circle on the map and show status on the Information window. If the Digital Output is from a network camera, the preview window will display live video from the camera.

### I/O Control

Select to open the I/O control window. This window allows you to control DO devices remotely.

**Note:** Adjust the setting of I/O device in **Main Console > General Setting > Setting > I/O Device** first, and the I/O control window will display the device status based on these settings.

# Web View

**Note:** Be sure to enable the **Live Streaming Server**. To enable, go to **General Setting > Network Service** select **Live Streaming** and click **Start Server**.

## Server IP

Open Internet Explorer and enter the IP address or DDNS name of the server followed by the connecting port.

Example: <http://192.168.1.16:8080/>

192.168.1.16 is the IP address of the server. 8080 is the port specified in **Use Default Web Server** in Network Service.

**Note:** Make sure the Live Stream Server is enabled. Please refer to Live Streaming Server for more information.

# Utilities

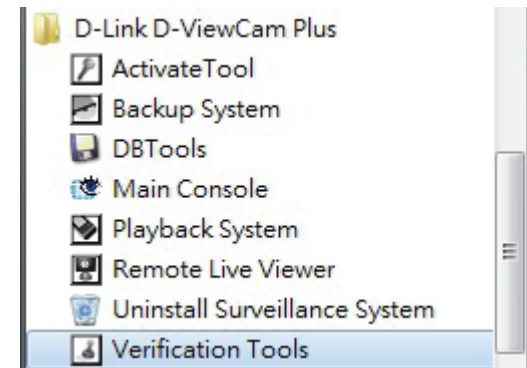

## Verification Tool

The Verification Tool verifies whether the data created by the system be tampered with or not. It is the process by which a digital watermark (a digital signature) is added to each recorded video frame to ensure its authenticity.

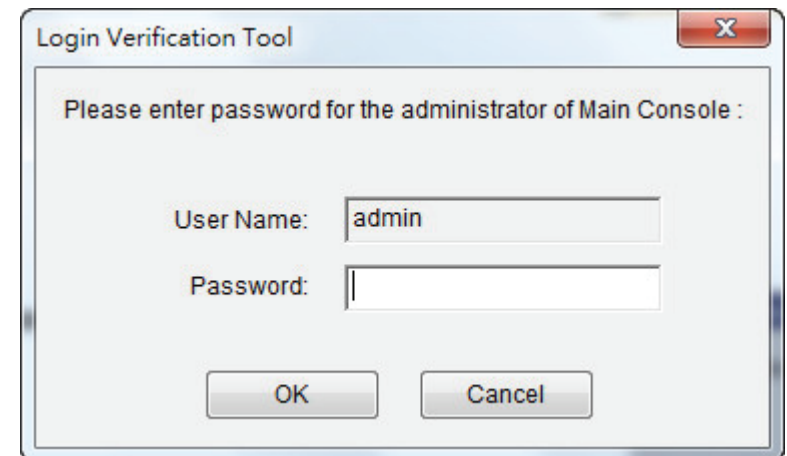

The 3 types of data that is verified by the Verification Tool are:

1. File in (.dat) (.264) format will be displayed as .
2. File in (.avi) (.asf) format will be displayed as .
3. File in (.bmp) (.jpg) format will be displayed as .

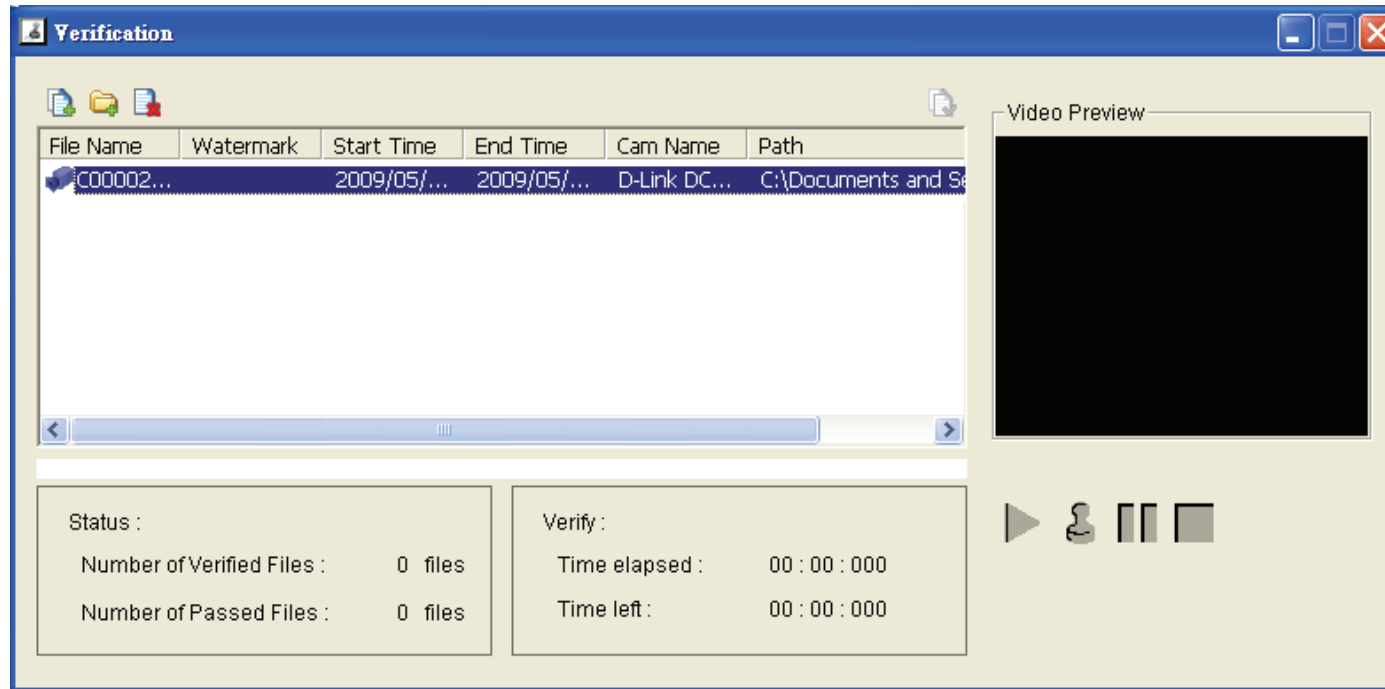

**Step 1:** Go to **Start > All Programs > D-Link D-ViewCam Plus > Verification Tool**.

**Step 2:** Enter the **Username** and **Password** to log in.

## Overview

 **Add File:** Click to insert a file to the list for verification.

 **Add Folder:** Click to choose a folder with multiple files and then add it to the list for verification.

 **Remove File:** Click to remove the selected file(s) from the list.

 **Select All:** Click to select all the files in the list for verification.

### Note:

1. Choose the file type first (.dat, .264, .avi, .asf, .bmp, .jpg) before selecting the files.
2. You can also drag files to the list for verification.

**Video Preview:** To preview the selected file from the verification list. Use **Play, Verify, Pause** and **Stop** for preview.

**Note:** Preview of .bmp and .jpg formats are not allowed.

## Verifying Image/Video

**Step 1:** Select a single or multiple files for verification.

**Step 2:** Click verify  to start verification.

**Step 3:** The verification results will be displayed in the **Watermark** column.

**Note:** If the file passes the verification, it will show .

**Note:** If the file was tampered with, it will show .

**Step 4:** The **Status** and **Verify** fields will display the information related to verification.

## License Management Tool

Use the **License Management Tool** to activate the software license from a serial number allocated with the software package, or de-activate the license and activate it again in another PC.

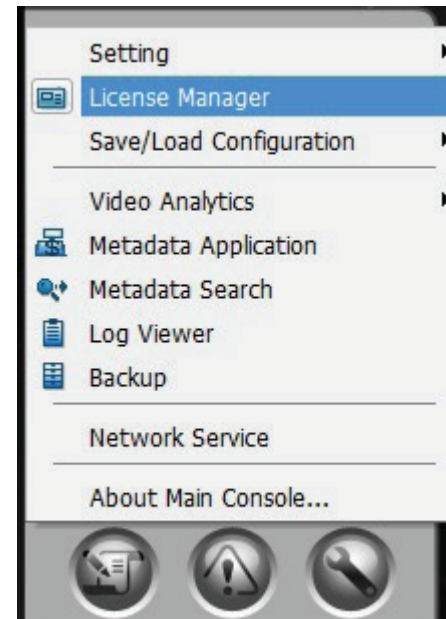

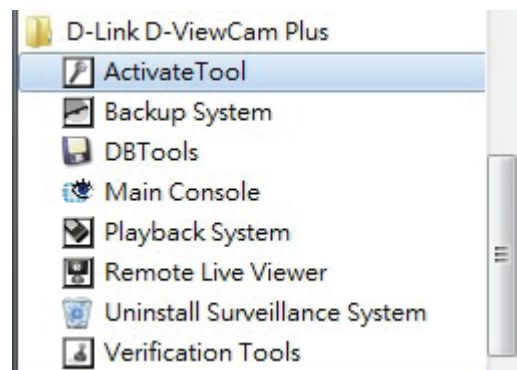

The following lists 4 types of license management process:

- To “activate” the license with PC connected to the network, follow the **Activation On line** process.
- To “activate” the license with PC not connected to the network, follow the **Activation Off line** process.
- To “de-activate/transfer” the license with PC connected to the network, follow the **Transfer On line** process.
- To “de-activate/transfer” the license with PC not connected to network, follow the **Transfer Off line** process.

### Overview

#### Start License Management

**Step 1:** Click **License Manager** in **General Setting** or click Activate Tool in the installation folder or browse the installation folder and click **Activate Tool.exe**.

The **License Manager Tool** screen displays.

## Activate / Transfer License

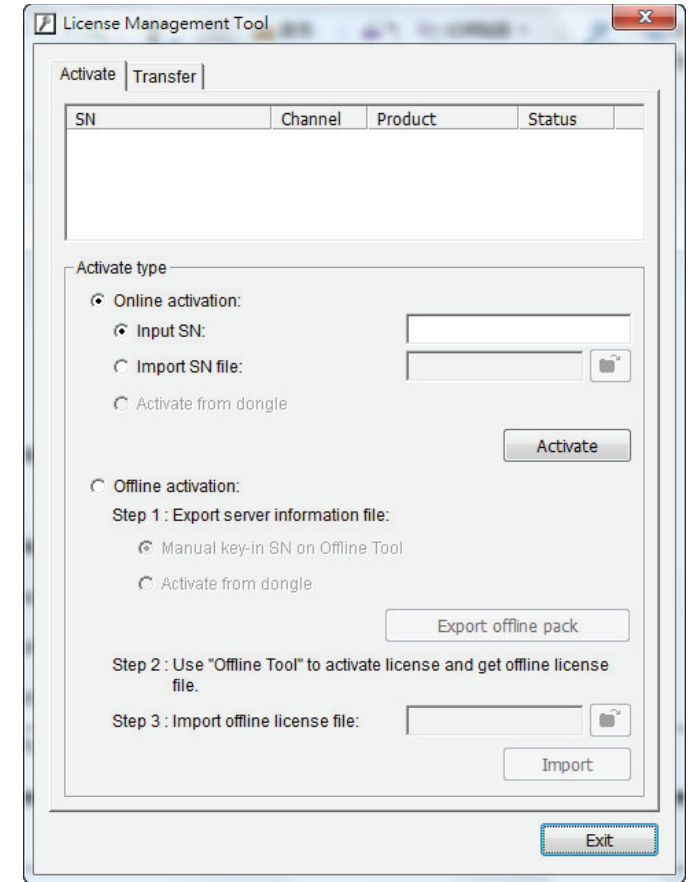

### Activation On line

**Step 1:** Start the **License Manager Tool**.

**Step 2:** Select **On line** as Activate type.

**Step 3:** Enter the SN (Serial number) or Import SN file, and then click **Activate**.

**Step 4:** Restart the Main Console if activation is successful.

## Activation Off line

**Step 1:** Start the **License Manager Tool**.

**Step 2:** Select **Off line** as Activate type.

**Step 3:** Enter the SN (Serial number) and then click **Activate**.

**Step 4:** Save the **Request File**, and then copy it to another PC connected to Internet.

**Step 5:** Browse and run **Off LineTool.exe** , and then click **Activate** to send the **Request File** to the license server.

**Step 6:** Save this License file, and then copy it to the D-ViewCam Plus server.

**Step 7:** Open **License Manager Tool** again, select **Import license file**, and then click **Activate**.

**Step 8:** Restart the MainConsole if the activation was successful.

## Transfer License

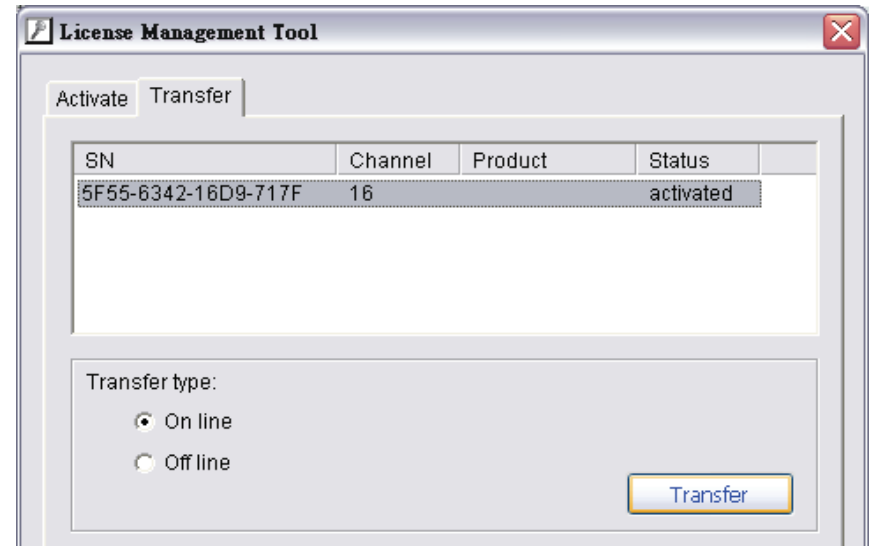

### Transfer On line

**Step 1:** Start the **License Manager Tool**.

**Step 2:** Select **Transfer**, and then select **On line** as Transfer type.

**Step 3:** Select your SN (Serial number) and then click **Transfer**.

**Step 4:** Restart the Main Console if activation is successful.

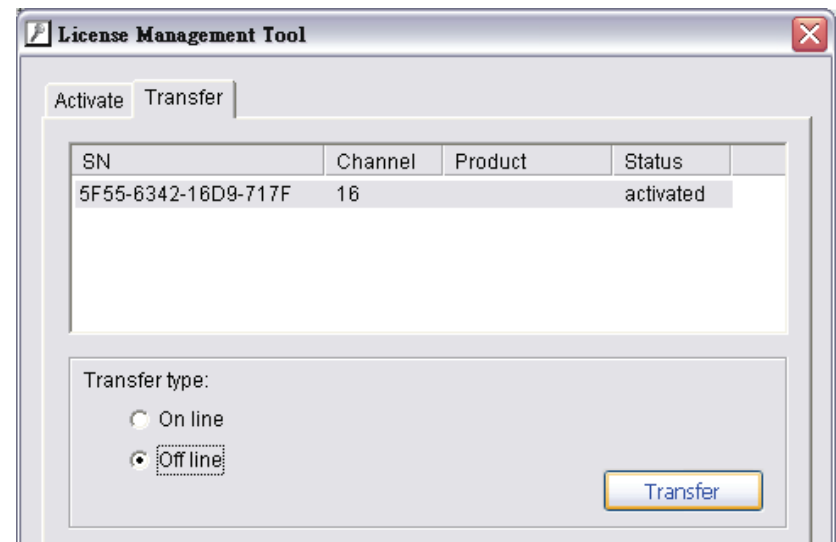

### Transfer Off line

**Step 1:** Start the **License Manager Tool**.

**Step 2:** Select **Transfer**, and then select **Off line** as Transfer type.

**Step 3:** Select SN (Serial number) and then click **Transfer**.

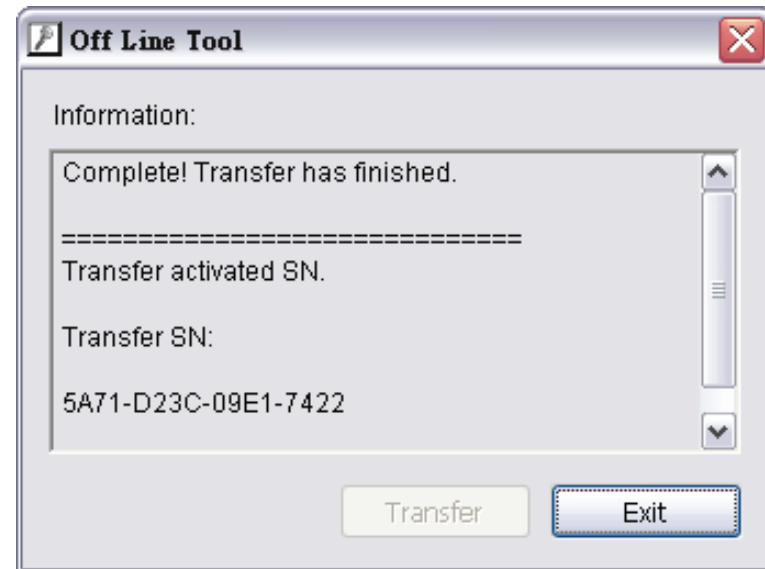

**Step 4:** Save the **Request File** and restart the MainConsole if activation is successful.

**Step 5:** Copy the **Request File** to another PC connected to Internet.

**Step 6:** Run **OffLineTool.exe**, select **Transfer SN** and click **Transfer** to send the **Request File** to the license server.

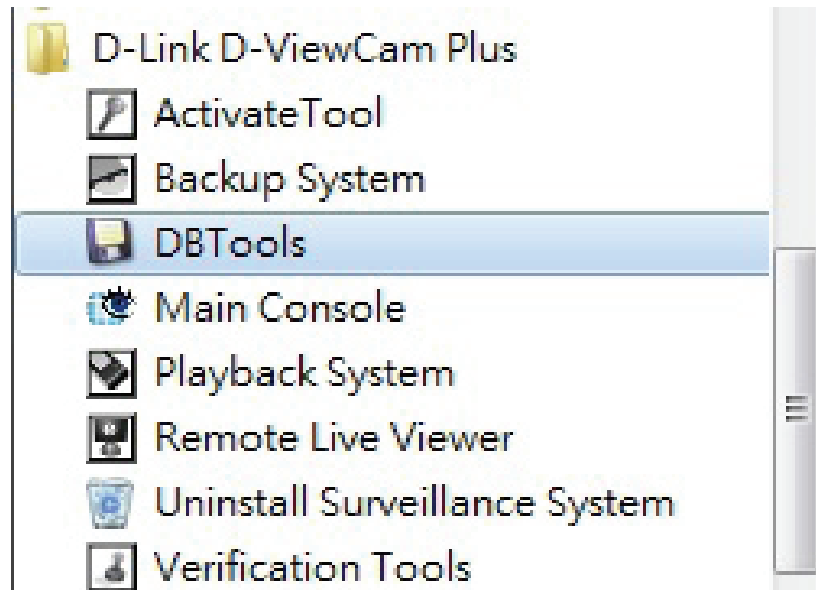

**Note:** Ensure to copy the request file to another PC and then send it to the license server, otherwise the SN cannot be re-activated again.

**Step 7:** Check if the transfer is complete.

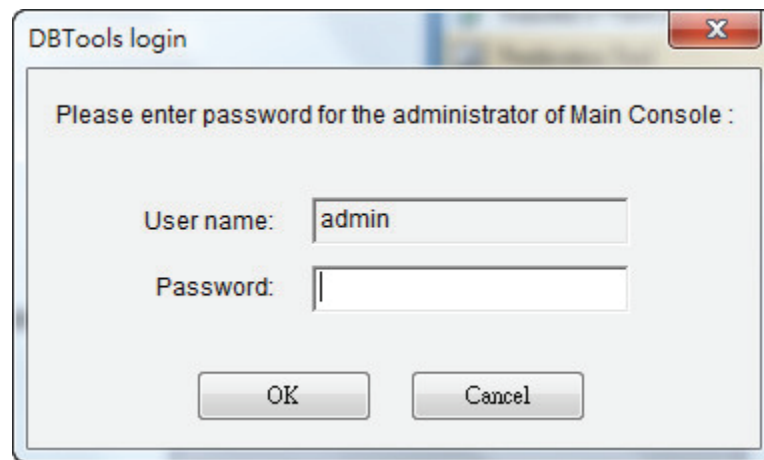

## DB Tool

**Step 1:** Execute DB Tools from the Start menu.

**Step 2:** Enter the administrator password and click **OK** to log in.

## Repair Database

This page has three repair methods: **Modify Location**, **Verify Only**, and **Repair Index and Repair Database**.

### Modify Location

Playback system can recognize all recording video in the folders which list on **Main Console > Config > Setting > General** page. For some reason, users need to use the Playback system to open recording video beyond storage location setting.

**Note:** The default storage location is in your installation directory.

**Step 1:** Select **Modify Location** from the Method drop-down menu.

**Step 2:** Click on the  button and select a new location.

To remove a database location, select it from the list and click on the  button to delete location.

**Step 3:** Click on the **Modify** button to save the location.

**Step 3:** Click  and select a new location.

To remove a database location, select it from the list and click  to delete location.

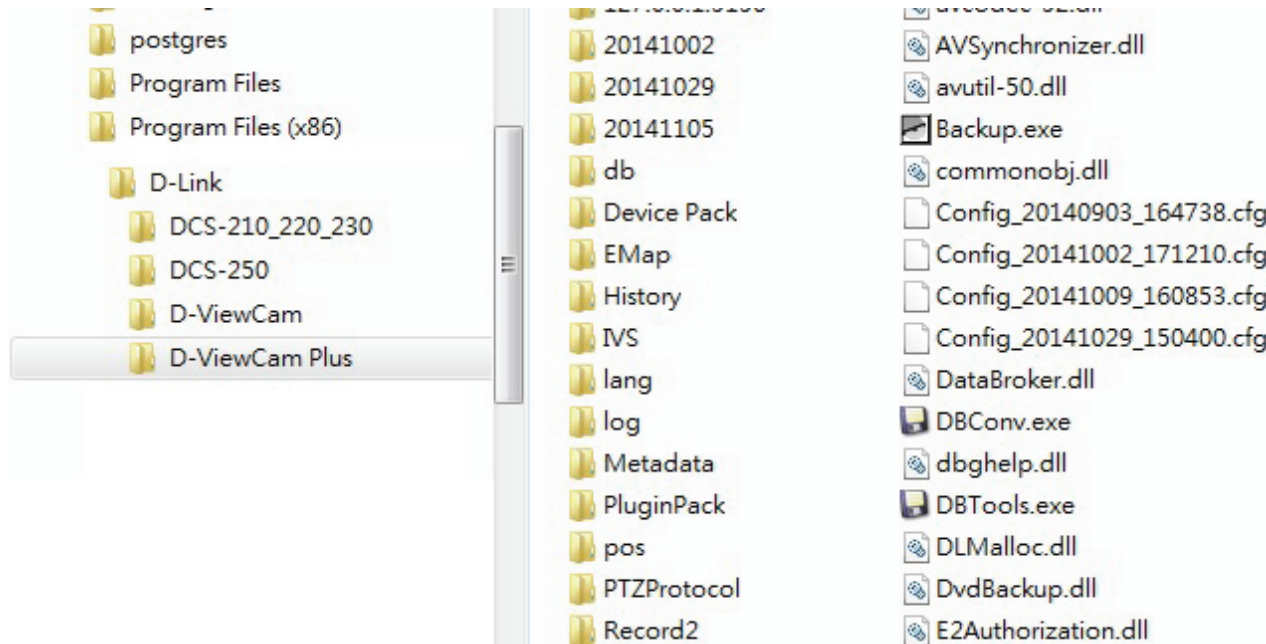

**Step 4:** Click **Modify** to save the location.

### Example of modify database

To transfer video from one PC to another, follow this procedure:

1. Manually copy all recorded video data files from the default installation path or other user-defined storage path of the old PC.

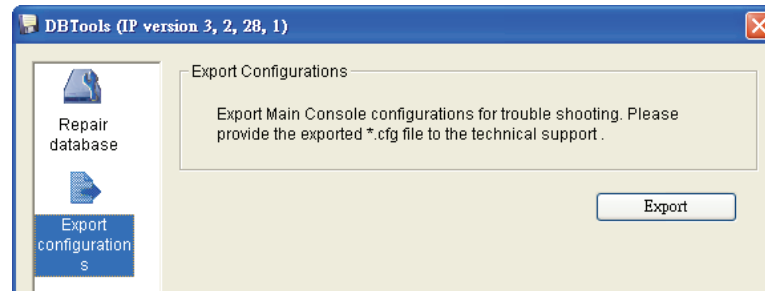

2. Manually paste all recorded video files to the default installation path or other user-defined storage path of the new PC.
3. Follow the previous page to add new location on new PC.
4. Old recorded video data can be viewed by the playback system on the new PC.

### Verify and Repair

This tool is used to check and repair your database and recording video if the problems below exist:

- (1) If there are records in database, but no video file, use DB Tools to delete records.
- (2) If there are video files but no record in database, use DB Tools to rearrange the database and find these records.

**Step 1:** Switch to **Repair Database**.

**Step 2:** Select **Modify Location** from the **Method** drop-down menu.

**Step 3:** Check the video location. The system will list all the video locations in the table, but if there are any missing locations, please use  to insert a location. After inserting the location, the system will show a file count in the table.

**Step 4:** Select **Verify Only** and then click **Verify**. This method will only check the files without modifying. The Verify Result will show how many files are broken or missing.

**Step 5:** Choose the method of Repair (Complete), and click **Repair**. The **Repair Result** will show the number of files that are fixed and inserted.

Repair Result: 2 files fixed, 41 files inserted.

**Step 6:** The repair new database will replace the old ones. The original database will change file names with extended repair date and time as shown below.

Name
EventLog.mdb
FileRecord.mdb
FileRecord.mdb_20080714A121358.mdb
PosRecord.mdb
ScheduleConfig.mdb
SystemLog.mdb
SystemLog.mdb_20080714A121358.mdb

**Note: Open Log** is a tool to record repair database recodes. It will recode repair method, file operation, start time, and end time.

```

## Remote Desktop Viewer

### How to install Remote Desktop Viewer

**Step 1:** Download the DCS-250 software from <http://download.hq.dlink.com/DCS-250/> and extract it to a folder.

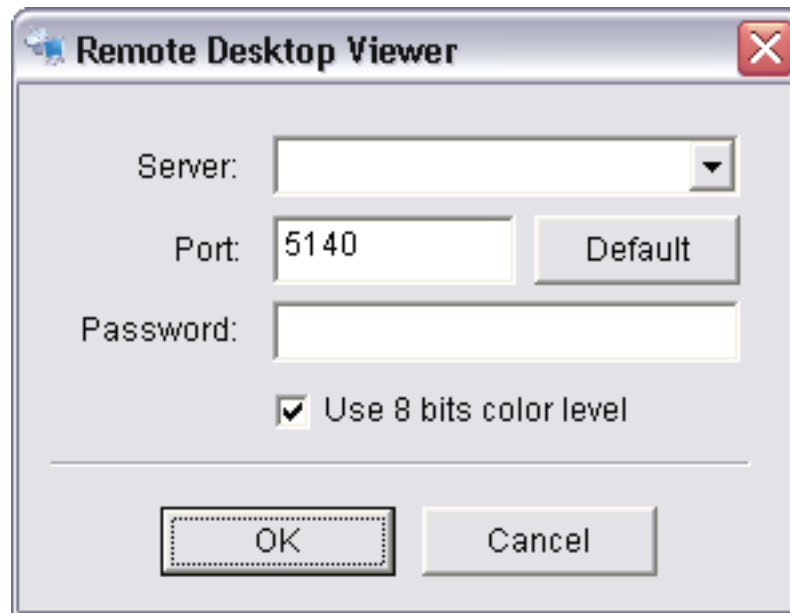

**Step 2:** In the newly created folder, open the **RemoteDesktopViewer** folder and run the **Setup.exe** file.

### How to Start Remote Desktop Viewer

**Step 1:** Go to **Start > All Programs > Remote Desktop Viewer > Remote Desktop Viewer**.

**Step 2:** Please enter the address, Port, and Password of the server and enable **Use 8 bits color level** to show steadier screen.

**Step 3:** Click **OK** to start Remote Desktop.

# Intelligent Video Surveillance (IVS) Software

The Intelligent Video Surveillance(IVS) software provides cutting-edge instant video analysis by tracking both moving objects and static targets while factoring environmental changes.

There are two different IVS licenses available: the Counting License and the Presence License. For information on how to register your IVS license key and activate the IVS features, refer to “License Management Tool” on page 174.

Feature	Counting License	Presence License
Number Of Detection Zones Or Lines	40	40
People Counting	✓	
Vehicle Counting	✓	
Video Stabilizer	✓	
Tamper Detection	✓	✓
Presence Filter		✓

- **People Counting:** This provides a bi-directional line-crossing filter, suitable for counting people in busy doorways and entrances.
- **Vehicle Counting:** This captures statistics on vehicle flow, and also provides speed estimates for vehicles.
- **Video Stabilizer:** In environments where stability is an issue, this helps compensate for any movement, providing a clear view.
- **Tamper Detection:** Detects any event that significantly changes the field of view of a camera, such as a loss of focus, the camera being covered, etc.
- **Presence Filter:** Detects when an object or individual has entered a defined area.

## Accessing the IVS Interface

**Step 1:** To access the IVS interface, double-click the camera you want to analyze video for.

**Step 2:** Click the General Setting button. In the menu that appears, select **Video Analytics**, then click **Intelligent Video Surveillance** to open the IVS window.

## Zones & Rules

In order to make detection zones and lines useful, it is essential that you define the zones and the rules used to monitor them. The Zones & Rules tab lets you fine tune the detection zones and detection rules.

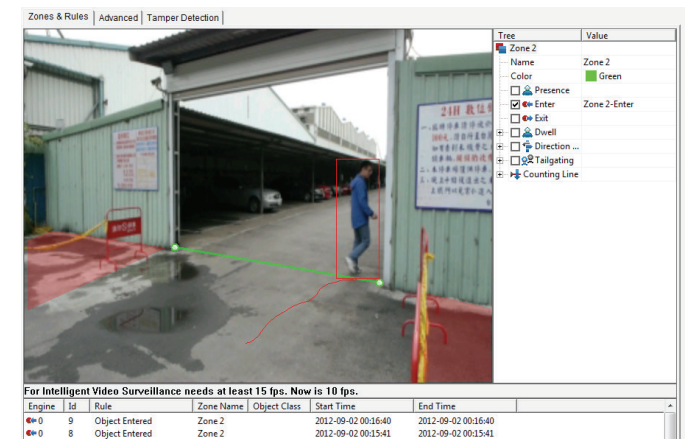

### Accessing the Zones & Rules Settings

Open the IVS interface and click on the **Zones & Rules** tab.

### The Tracking Display

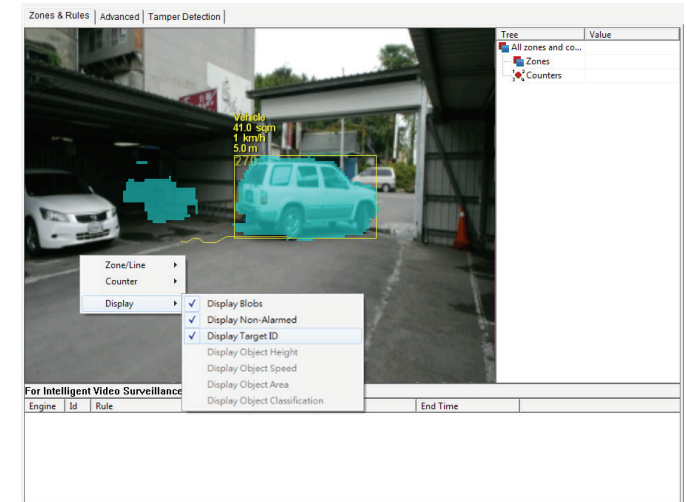

The tracking display shows all moving and static targets that are currently being tracked by IVS. Alarmed objects are marked red, and non-alarmed objects are marked yellow. The tracking display also shows how the trails of detected objects intersect your defined detection zones and lines.

## Customizing the Tracking Display

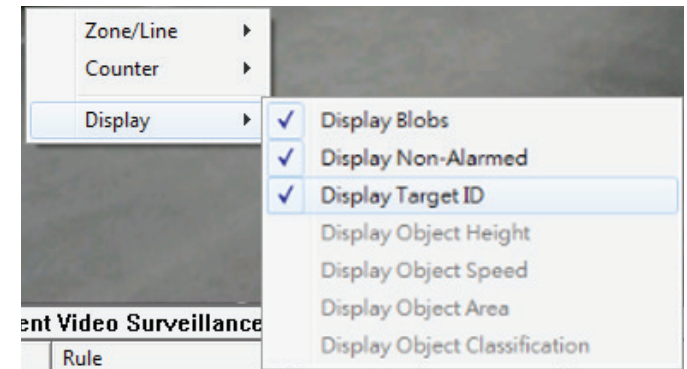

You can customize the tracking display window to show various tracking data.

**Step 1:** Right-click on the tracking display window, then select **Display** from the menu that appears.

**Step 2:** Here, you can choose whether or not to display specific tracking information.

Setting	Description	Default Setting
Display Blobs	Shows the algorithm coverage with a turquoise-colored blob.	Disabled
Display Non-alarmed Objects	Displays all objects, including alarmed and non-alarmed objects, to show how the detection zones and object trails intersect in order to assist you with optimizing your detection settings. Alarmed objects are marked red, and non-alarmed objects are marked yellow.	Enabled
Display Target ID	Displays the object's ID number to help differentiate detected objects.	Disabled

## Creating Detection Zones and Lines

You can define detection zones and lines to help detect events of interest.

### Creating a Zone or Line

Right-click on the video image, select **Zone/Line**, then click on **Create zone** or **Create line**.

### Editing a Zone or Line

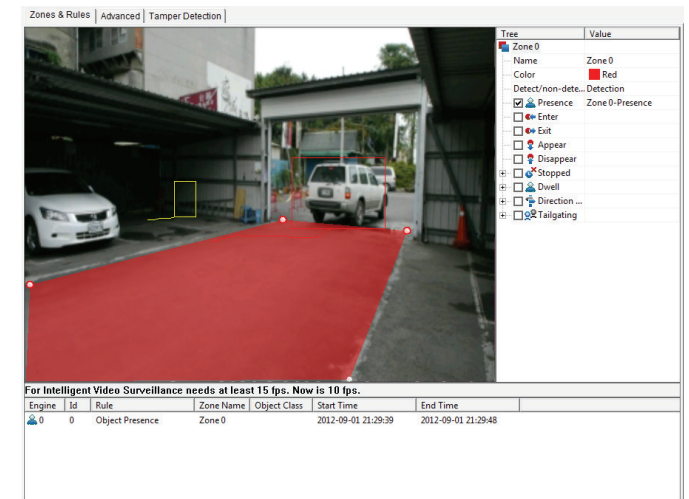

You can change the shape or size of a detection zone or line by clicking and dragging on their “nodes” at their corners.

### Adding a Node

To add a node, double-click on the zone or line at the point where you want to add a new node. Alternatively, you can right-click on the area or line where you want to add a new node, select **Node** from the menu that appears, and click **Insert Node**.

### Removing a Node

To remove a node, right click on the node, select **Node** from the menu that appears, and click **Remove Node**.

### Detection Properties

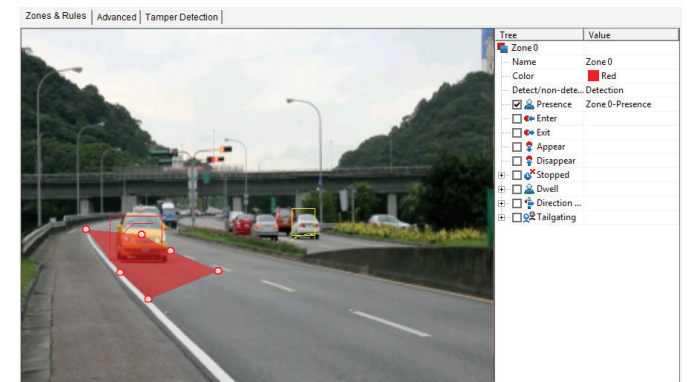

When you select a detection zone or line, the properties for it will appear on the right side of the tracking display. You can click on a property to change its values, or you can click on a checkbox to enable or disable a detection option.

Each detection zone and line has the following properties:

Setting	Description	Default Setting
Name	Enter a name to help you identify the zone or line.	Zone [ID No.]
Color	Select a color to use for the zone or line.	Red
Detect/non-detect	Set whether the zone or line is to be used for detection.  When a zone is set to Non-Detection, it will not be used for tracking or detection. This can be useful for preventing false alarms, such as foliage moving in the wind. Non-Detection areas will have a grid of Xs through them when shown in the tracking display.	Detection

If you have an IVS Presence License, you can choose to enable this feature to trigger an alarm when an object is present inside a detection zone, or if an object passes through a detection line.

Tree	Value
Zone 0	
Name	Zone 0
Color	Red
Detect/non-dete...	Detection
<input checked="" type="checkbox"/> Presence	Zone 0-Presence
<input type="checkbox"/> Enter	
<input type="checkbox"/> Exit	
<input type="checkbox"/> Appear	
<input type="checkbox"/> Disappear	
<input type="checkbox"/> Stopped	
<input type="checkbox"/> Dwell	
<input type="checkbox"/> Direction ...	
<input type="checkbox"/> Tailgating	

## Counters

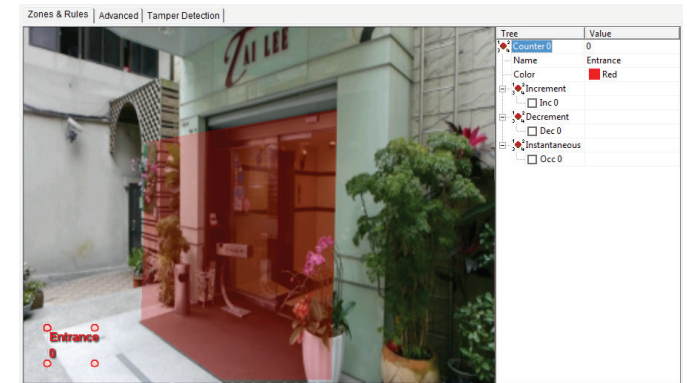

If you have a Counting License, you can create an on-screen counter to show how many alarms have been triggered by objects entering a specified detection zone or crossing a specified detection line. Counters can also show how many objects are currently in a specified detection zone or crossing a specified detection line.

### Creating a Counter

Right-click on the tracking display, select **Counter**, then click **Add counter**.

A counter will be added to the video image. You can click and drag it to move it to a desired position, and you can click and drag its corners to resize it. After creating a counter, you can adjust its properties on the right side of the screen to define its behavior. These properties are described on the next page.

## Counter Properties

When you have a counter selected, you can adjust its properties and how it will adjust its count.

Setting	Description
Counter #	This is the current value of the counter.
Name	Enter a name to help you identify this counter.
Color	Select a color to use for this counter.
Increment	Increases the counter each time an object enters the specified detection zone or crosses the specified detection line.
Decrement	Decreases the counter each time an object enters the specified detection zone or crosses the specified detection line.
Instantaneous	This will set the counter to display the number of objects that are currently in the specified detection zone or crossing the specified detection line.

Tree	Value
1 2 3 4 Counter 0	30
Name	Entrance
Color	 Red
1 2 3 4 Increment	
<input checked="" type="checkbox"/> Inc 0	 Zone 0 : Enter
<input type="checkbox"/> Inc 1	
1 2 3 4 Decrement	
<input type="checkbox"/> Dec 0	
1 2 3 4 Instantaneous	
<input type="checkbox"/> Occ 0	

## Advanced IVS Configuration

The Advanced tab on the IVS interface allows you to adjust various settings related to video stabilization and how alarms, object detection, and counting are performed.

### Accessing the Advanced Settings

To access the advanced settings, click on the **Advanced** tab in the IVS interface.

### Advanced Settings

The settings available may include the following:

Setting	Description
Camera Shake Compensation	<p>Enabling this feature can help improve IVS performance if your cameras are installed in vibration-prone locations.</p> <p>If camera shake is not an issue for your cameras, this setting should be disabled.</p>
Alarm Retrigger Time	<p>After an alarm is triggered by an object, this sets the delay before another alarm can be triggered by the same object.</p>
Tracker Configuration	<p>This sets how large an object must be in order to track it, and how long to track an object for after it stops moving.</p> <p><b>Minimum tracked object size:</b> This sets the minimum size for an object in order for IVS to track it. You can lower this value to track smaller objects, but this may result in more false detections and sacrifices noise immunity. Normally, there is no need to change this value.</p> <p><b>Object hold on time:</b> This sets the amount of time to track an object after it stops moving. After this time expires, IVS will forget the object.</p>
Counting Runtime	<p>Reset every: This sets a daily time to reset the counters.</p> <p>Log every: This sets how often IVS will save the current counter values to a log file.</p>

The screenshot shows the 'Advanced' tab in the IVS interface. It contains four main sections:

- Camera Shake Compensation:** A checkbox labeled 'Enable Camera Shake Cancellation' is currently unchecked.
- Alarm Retrigger Time:** A field for 'Alarm Holdoff time' is set to '5' seconds.
- Tracker Configuration:** Two fields: 'Minimum tracked object size' is set to '10' Pixel, and 'Object hold on time' is set to '60' Second.
- Counting Runtime:** Two dropdown menus: 'Reset every' is set to '01:00 AM' and 'Log every' is set to '30 mins'.

## Tamper Detection

Tamper Detection lets you detect events when the camera's view has been significantly changed or altered. This can be useful for detecting events like the camera view being blocked, the camera being defocused, redirecting the camera, spray-painting of the camera, etc. Tamper Detection relies on large, persistent changes in the video image.

### Accessing Tamper Detection

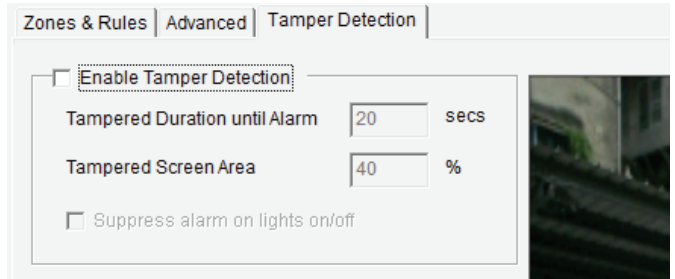

To access the Tamper Detection settings, click on the **Tamper Detection** tab in the IVS interface.

Zones & Rules | Advanced | Tamper Detection

### Tamper Detection Settings

The settings available may include the following:

Setting	Description
Enable Tamper Detection	This will enable or disable the Tamper Detection feature.
Tampered Duration until Alarm	Sets how long the camera's view must be changed for before an alarm is triggered to indicate tampering. Short times will give you faster notification of possible tampering, but may result in false positives.
Tampered Screen Area	This sets how much of the video image must change to trigger an alarm. Smaller values will make detection more sensitive, but may result in false positives.
Suppress alarm on lights on/off	Enabling this will help IVS filter out situations where there may be rapid changes in the lighting of the environment, such as turning indoor lighting on/off, to prevent false detection of tampering. Enabling this setting will sacrifice some detection sensitivity, so if your cameras are not viewing an area that may have fast lighting changes, this setting should be disabled.

## IVS Log Viewer

IVS works with D-ViewCam's Log Viewer to record detected events and alarms. You can also export these logs to file.

### Accessing the Log Viewer

From D-ViewCam's Main Console, click the General Setting button, then select **Log Viewer** from the menu that appears.

The Log Viewer window will open. IVS adds three tabs to the Log Viewer: **Counting Application**, **Counting Application (Diagram)**, and **IVS Event**.

Counting Application	Shows a log of the IVS counter values during a specified period of time.
Counting Application (Diagram)	Shows a bar graph of the IVS counter values during a specified period of time.
IVS Event	Shows a log of events detected by IVS.

The contents of these tabs are described in the following pages.

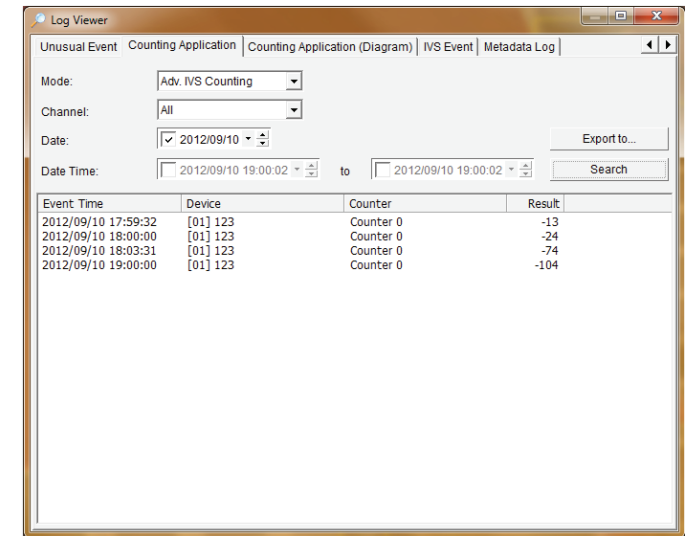

## Counting Application

This tab shows a log of the IVS counter values during a specified period of time.

To view a log of your IVS counter activity:

- Step 1:** Use the **Mode** dropdown box to select whether you want **Basic Counting** or **Adv. IVS Counting**.
- Step 2:** Use the **Channel** dropdown box to select which channel you want to see activity for, or if you want a log for **All** channels.
- Step 3:** Select the period of time you want to search for. Select **Date** if you want to show activity for a specific day, or select **Date Time** and enter the period of time you want.
- Step 4:** Select **Search** to show the search results. You can click the **Export to...** button to export the log to an .xls or .txt file.

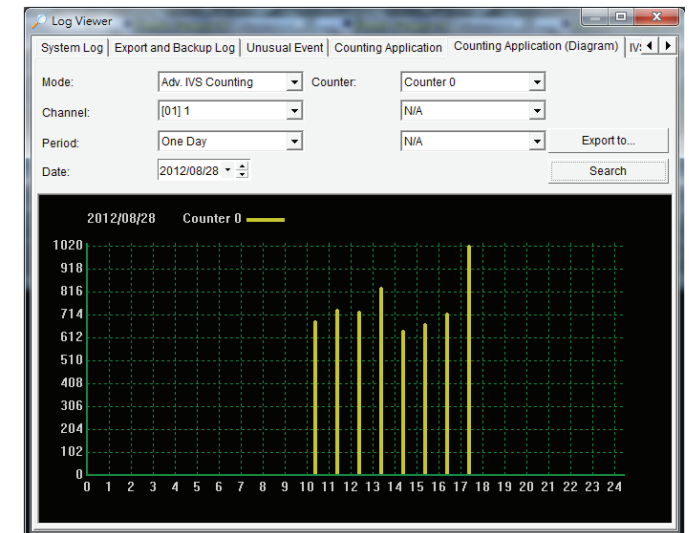

## Counting Application (Diagram)

This tab shows a bar graph of the IVS counter values during a specified period of time.

To view a graph of your IVS counter activity:

- Step 1:** Use the **Mode** dropdown box to select whether you want **Basic Counting** or **Adv. IVS Counting**.
- Step 2:** Use the **Channel** dropdown box to select which channel you want to see activity for.
- Step 3:** Use the **Period** dropdown box to select the period of time you want to search for, then set the **Date** you want to see activity from.
- Step 4:** Use the **Counter** dropdown boxes to select which counters you want to see activity for. You can select up to 3 counters. Please note that if you select a counter that uses instantaneous counting, the counter value that will be displayed will be the last value recorded during the selected period.
- Step 5:** Select **Search** to show the search results. You can click the **Export to...** button to export the graph to a .bmp file.

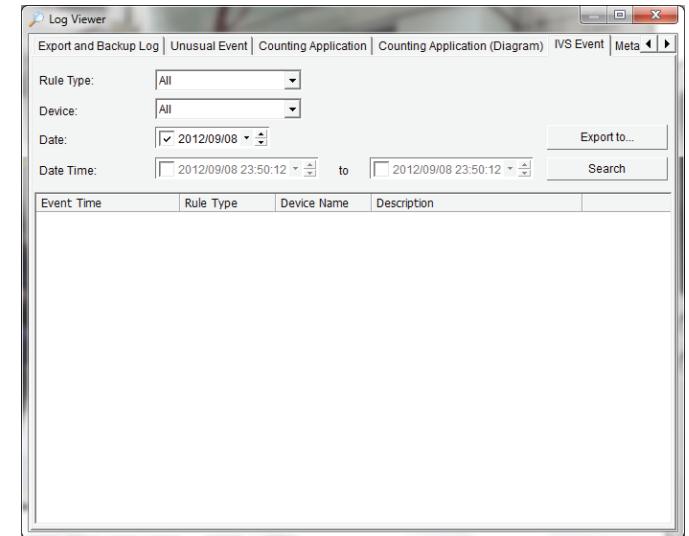

## IVS Events

This tab shows events recorded by IVS.

To view a log of events recorded by IVS:

- Step 1:** Use the **Rule Type** dropdown box to select what type of event to view, or select **All** to view all event types.
- Step 2:** Use the **Device** dropdown box to select which camera you want to see activity for.
- Step 3:** Select the period of time you want to search for. Select **Date** if you want to show activity for a specific day, or select **Date Time** and enter the period of time you want.
- Step 5:** Select **Search** to show the search results. You can click the **Export to...** button to export the log to an .xls file.

# Frequently Asked Questions

## 1. What languages does the D-ViewCam Plus software support?

Albania	Bulgarian	Chinese (Simplified )	Chinese (Traditional)	Croatian
Czech	Danish	Dutch	English	Farsi
Finnish	French	German	Hebrew	Hungarian
Italian	Japanese	Korean	Norwegian	Polish
Portuguese (Brazil)	Portuguese (Portugal)	Romanian	Russian	Serbian
Slovak	Slovenian	Spanish	Swedish	Thai
Turkish				

## 2. How do I set up E-Map?

Go to **Main Console > Start Monitor** and then click **Open E-map**.

**Step 1:** Select the map.

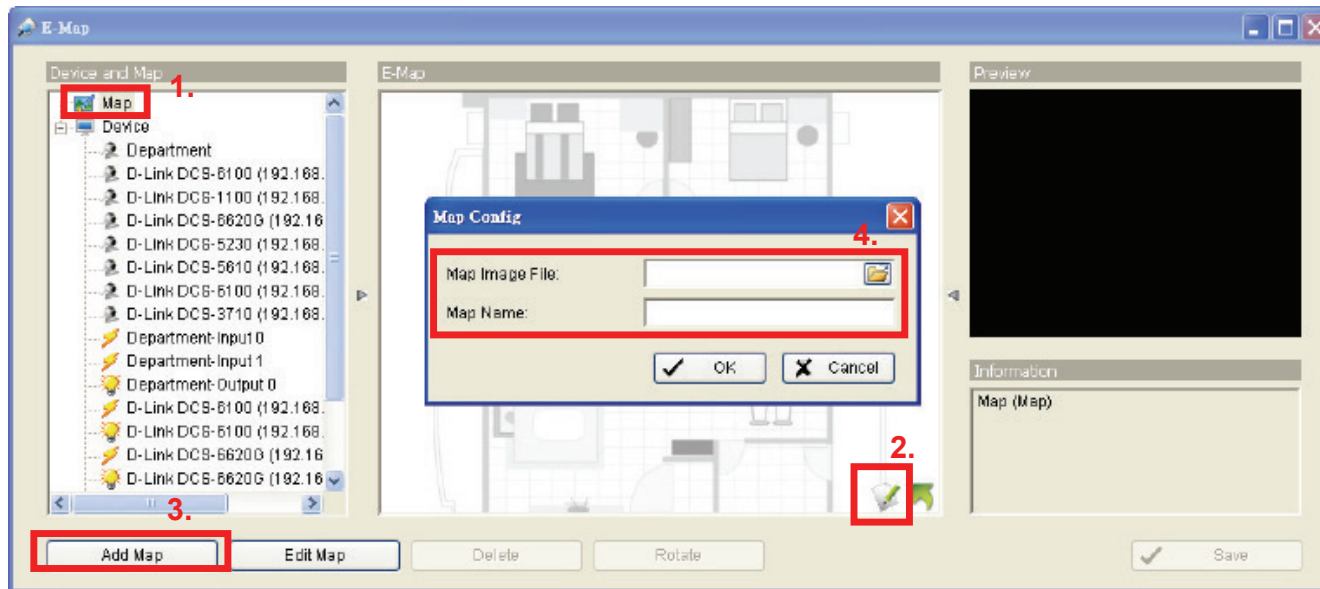

**Step 2:** Click **Browser/Edit Mode**.

**Step 3:** Click **Add Map**.

**Step 4:** Choose a map and then enter the map name.

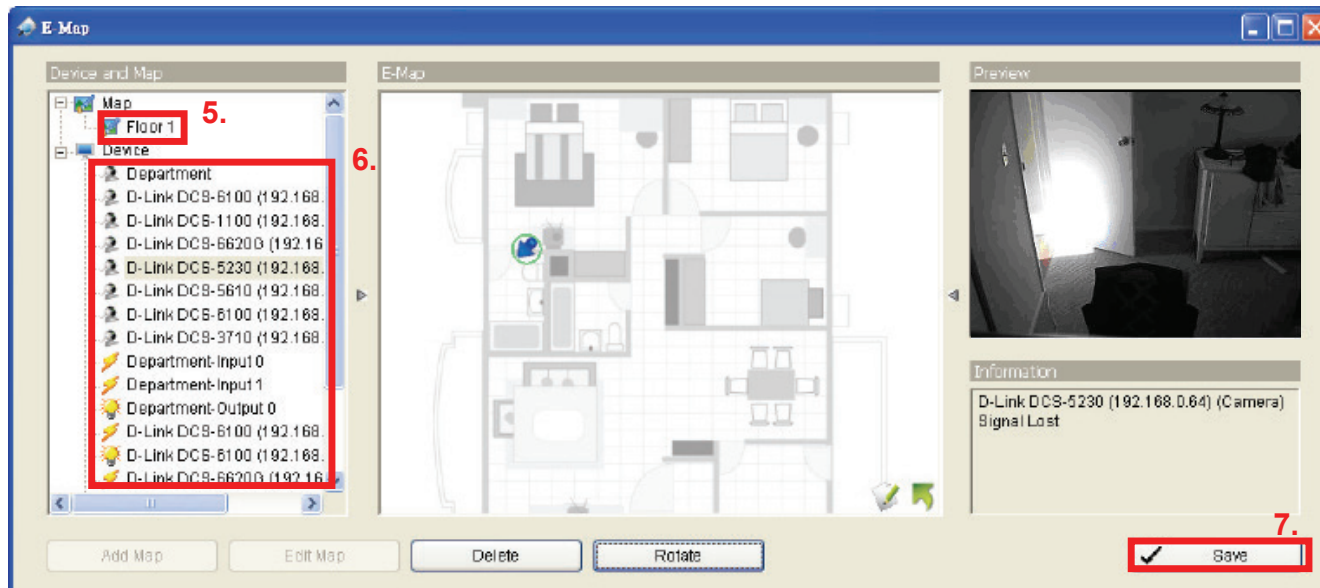

**Step 5:** Select the Map that you earlier set.

**Step 6:** Drag and drop the camera or IO device to the map.

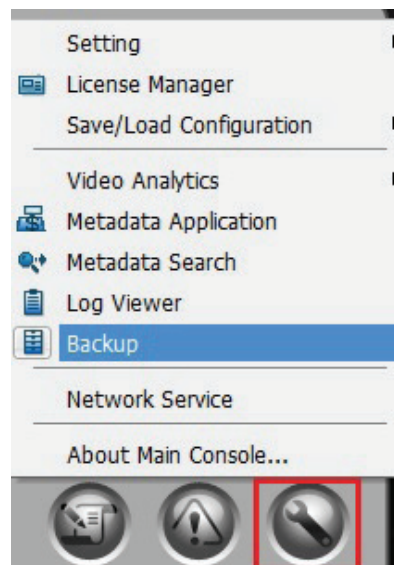

**Step 7:** Click **OK** to save your settings.

### 3. How do I backup video files?

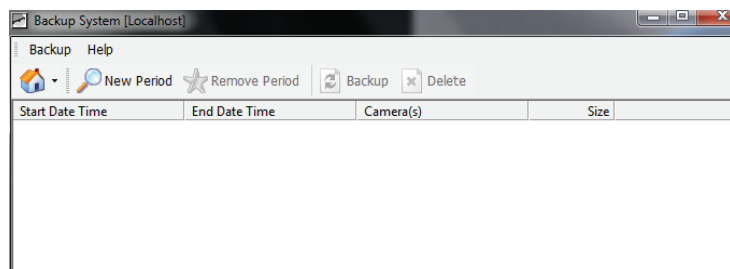

The system allows you can backup video record files into CD/DVD or other drives, and view those videos via playback.exe which will also be saved in the backup folder.

Follow these steps to backup your video:

**Step 1:** Go to **Main Console > General Setting > Backup.**

**Step 2:** Click **New Period.**

**Step 3:** Set the **Start** and **End Time.**

**Step 4:** Select the cameras that you want to backup.

**Step 5:** Click **OK.**

**Step 6:** Click **Backup**.

**Step 7:** Click **New Period**.

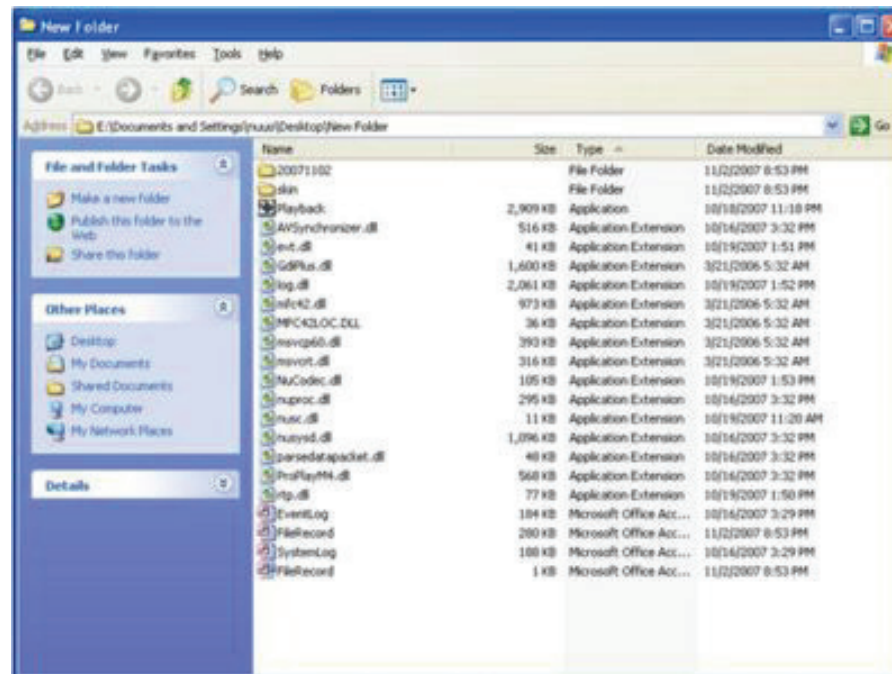

**Step 8:** Choose a location to backup media.

**Step 9:** Select **Backup Event Log** and **Backup System Log**.

**Step 10:** Click **OK**.

**Step 11:** You can now execute the playback.exe to check your backup files.

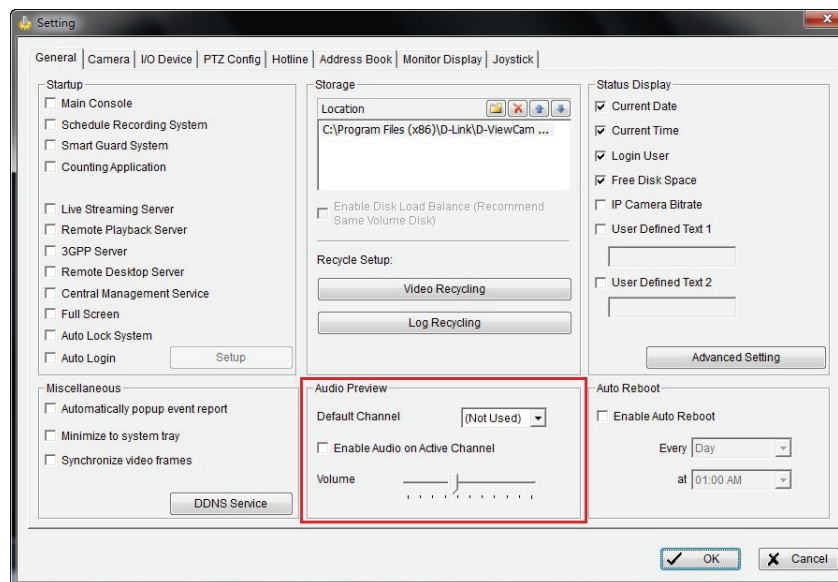

#### 4. How do I enable audio in Live Streaming for IP cameras?

In order to save bandwidth, the default setting for audio is disabled. This function must be enabled manually. Please follow the steps given below.

**Step 1:** Go to **General Setting > Setting > System Setting > General** and enable **Preview Active Channel**.

The default channel means the background audio of camera channel.

**Step 2:** Switch audio channels to hear audio.

If you choose sub-screen 1, you will hear audio from camera 1 or if you choose sub-screen 2, you will hear audio from camera 2.

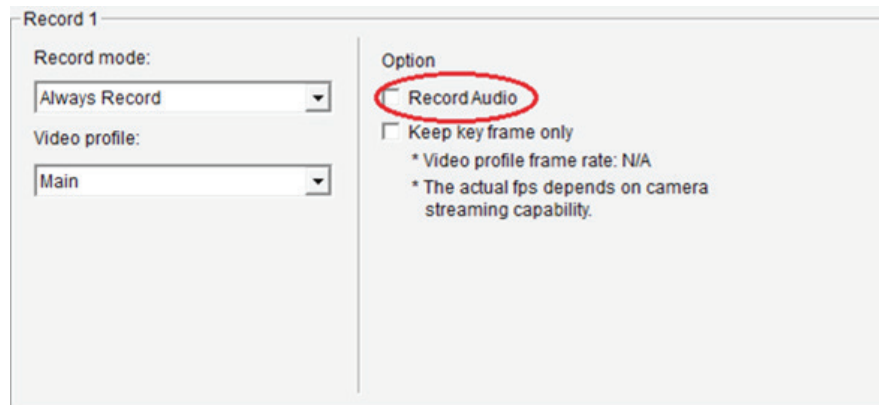

**Note:** If you don't choose any sub-screen, you will hear audio from the default channel.

5. How do I record audio for Network Cameras?

**Step 1:** Execute Main Console and go to **Schedule > Configure** > enable **Record Audio** and click **OK**.

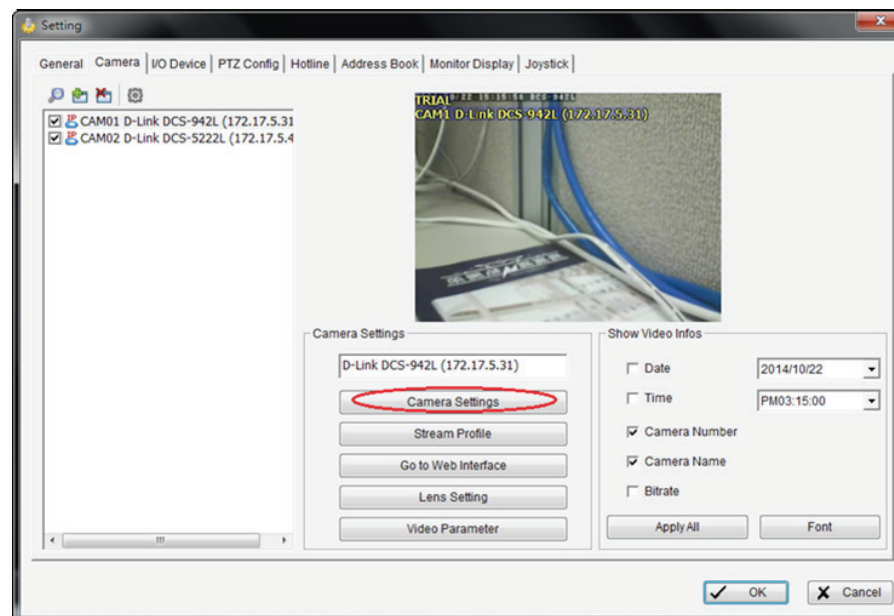

**Step 2:** Click on **Start > Start Recording Schedule**.

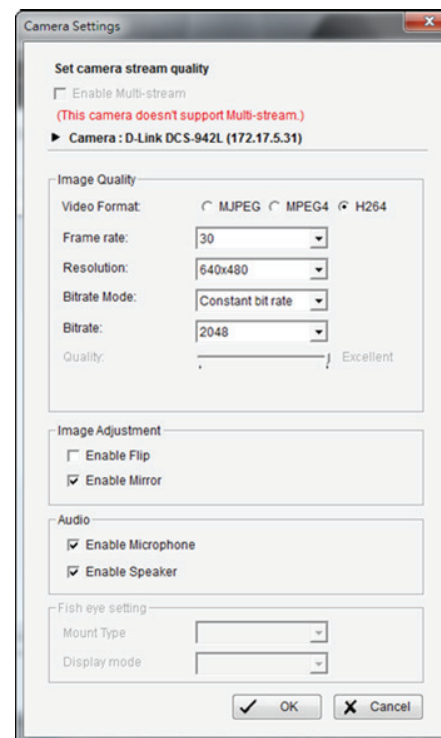

6. How do I change the recording frame rate and the resolution for network cameras?

**Step 1:** Open Main Console and go to **General Setting > Setting > System Setting > Camera**.

**Step 2:** Select the camera to change the frame rate.

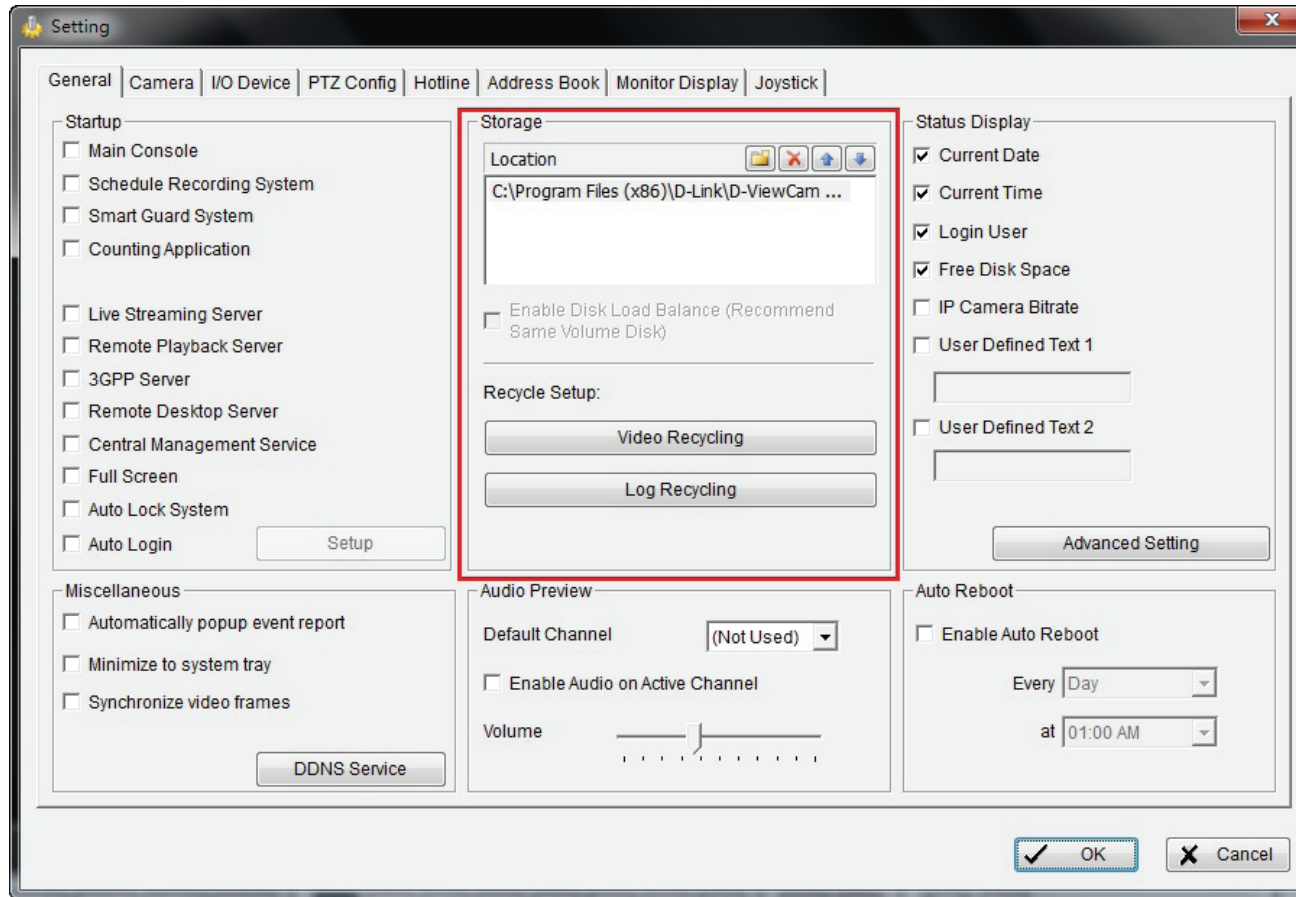

**Step 3:** Click **Camera Settings** to change the frame rate, resolution, and quality.

7. How do I set multiple storage paths for video recording?

The Main Console allows you to set up several hard disk drives as storage. When the first hard disk is almost full (the capacity is less than 800 MB on system disks or 100 MB on non-system disks), the Main Console will try to find a second storage with enough capacity. If it is not available, then the system will start recycling the data, if auto-recycling is enabled.

Go to **Main Console > Setting > System Setting > General > Storage Location** to modify your settings.

8. Why do I see “Disk space is low and the scheduler has been shut down. Please check the storage location setting to recover”?

Please follow the steps below to solve this issue.

**Step 1:** Verify the following settings and configuration.

- Ensure the auto recycle, auto login, auto startup and schedule options are enabled in the Main Console.
- Remove NOD32 antivirus since it generates a large amount of log files (.tmp files) that occupy a lot of hard drive space and causes the recording to stop.
- Do not adjust the system clock once the recording is started.
- Do not unplug a removable disk when the system is recording.
- Check if any quota limit is set in your hard drive.
- Check if the hard drive is set as “read only” or if a folder name “1” exists.
- Check if the hard drive has bad sectors inside or damaged.
- Make sure you are not using the network hard drive.

**Step 2:** Verify if the system stops recording which is caused by insufficient hard drive space.

- Check if the recording paths are the same in FileRecord.ini and Storage location.
  - Remove the oldest video folders or move them to another hard drive.
  - Check the dberr.log. This log file can be found in D-ViewCam installation folder. If there are a lot of Eventlog and Systemlog errors in dberr.log. Eventlog.mdb and Systemlog.mdb might be oversized due to frequent events or scheduler is set as record on motion while the cameras focus on a dynamic background.
  - The system’s hard drive space must be more than 800 MB and the data hard drive space must be more than 500 MB for recording.
- If you still experience this problem, then stop recording and use DB tools to repair/rebuild database.

9. Why do I get “Live streaming server can not be connected” message?

In general, this error message is caused by network problem, so always check your network connection first.

If you are connecting to a remote server or device through WAN. Please make sure the remote server or device is not behind a router’s firewall or the port is forwarded properly to bypass the router’s firewall.

10. Why do I get a "Missing or corrupted resource files. Please re-install the system to solve the problem" message?

This error message occurs when the software failed to execute the necessary file for the requested operation.

1. When loading the Main Console:

The skin files or database may be corrupted to cause this error message. Please uninstall the software, and install the latest version.

2. When loading ActiveX of web live viewer/ playback

Please follow the instructions below for troubleshooting.

**Step 1.** Turn off UAC in control panel on Windows Vista.

**Step 2.** Enable the privilege level option in compatibility tab in Main Console properties.

11. Why do I get a “The procedure entry point WMCreateWriter could not be located in the dynamic link library WMVCore.DLL.” message?

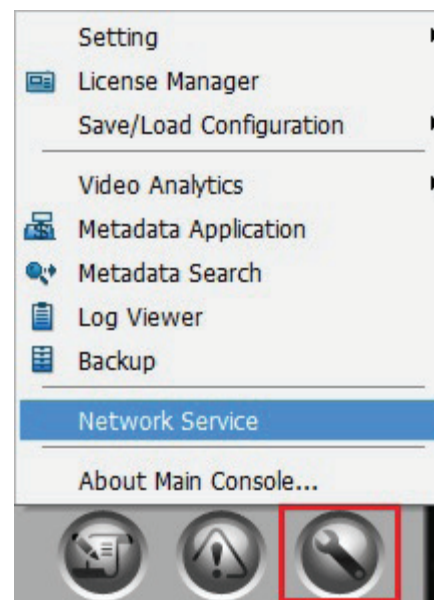

If you see this error message, then please upgrade your windows media player and this problem will be fixed.

Please download the latest Windows media player here, <http://www.microsoft.com/windows/windowsmedia/default.msp>.

12. How do I start network services?

**Step 1:** Go to **General Setting > Network services.**

**Step 2:** Please remember to click on the services you want to start in Main Console.

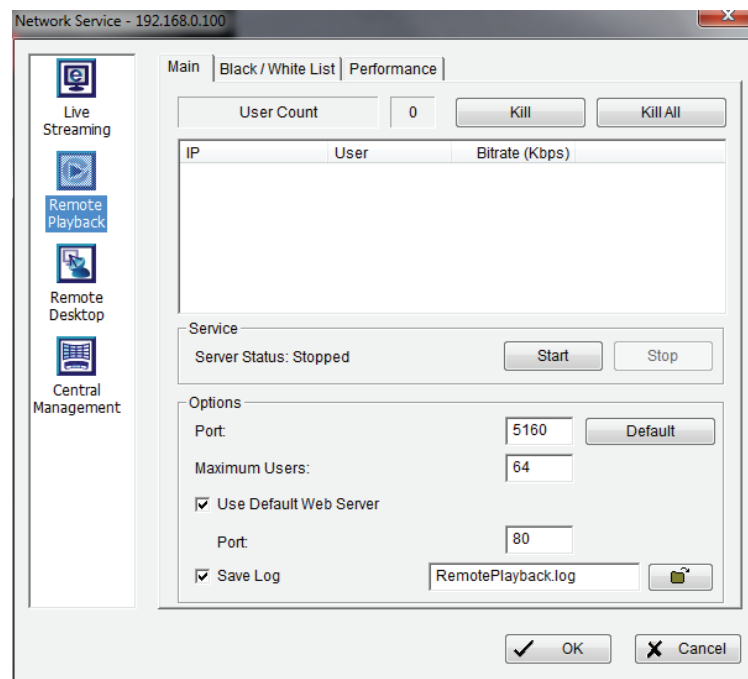

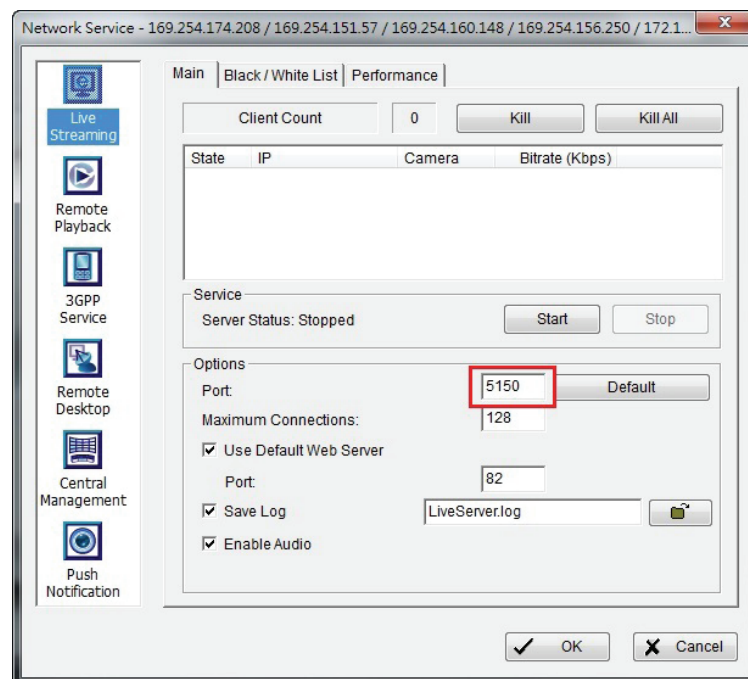

### 13. How to configure my PC/Server to allow remote access to Viewer and Playback?

In order to view remote live viewer and remote playback from the Internet, there are two things you have to do.

**Step 1:** Start Network Service in Main Console. To start, go to **Main Console > General Setting > Network Service** and then start this service.

- The default port number for live streaming is 5150.
- The default port number for remote playback is 5160.
- The default port for web browser is 80.

If you want to modify, please don't forget to set it to port forwarding on your router.

If you see the following error message, this means that your port 80 was occupied by the another device, therefore, you have to change the port number.

**Step 2:** Enable port forwarding in your router and then find the public IP address of your router and set port forwarding on the router to NVR LAN IP.

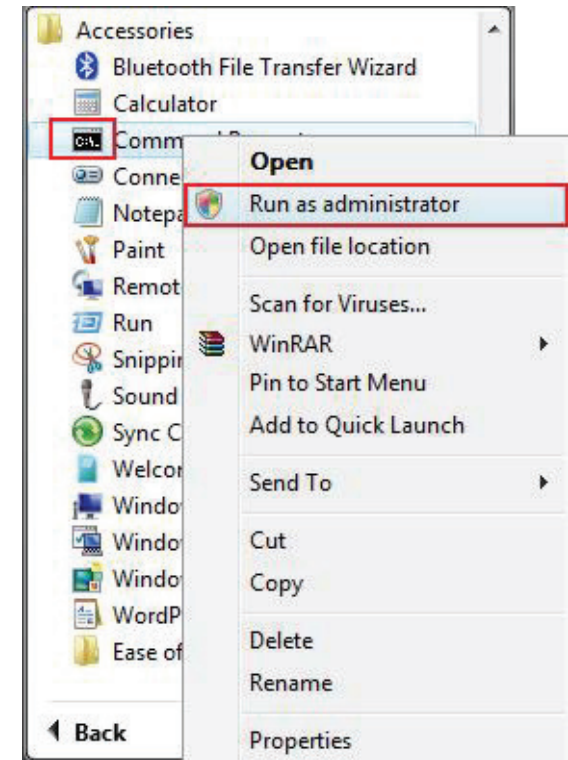

- You can see the public IP address of your router in the configuration menu.
- You can also configure NAT (or port forwarding) port 80, 5150 and 5160 to your NVR's LAN IP (e.g. 192.168.3.30) in the router.
- Port forwarding is similar to the example given below:  
You have to forward 3 ports, one for 80, one for 5150 and one for 5160.  
All 3 ports should point to e.g. 192.168.3.30

After you have successfully forwarded the 3 ports in your router, you will be able to access remote live viewer and remote playback from the Internet.

14. Why can't I see live view and video playback on Internet Explorer after upgrading to the latest version?

This is often caused by old temporary IE components in Windows. Please remove these IE components and reinstall ActiveX to solve the problem.

**Step 1:** Close IE and its related applications first. Otherwise some files may be locked during removal. If your OS is Vista, please run "Command prompt" as an administrator or you will not be able to remove these components.

**Step 2:** Go to **Start > Run >** enter **cmd** and press **OK**.

**Step 3:** Type **cd C:\WINDOWS\Downloaded Program Files**

**Step 4:** Type **dir** to list all the objects on this folder .

```

C:\WINDOWS\system32\cmd.exe
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.
C:\Documents and Settings\nuuo> cd C:\WINDOWS\Downloaded Program Files
C:\WINDOWS\Downloaded Program Files> dir
  
```

**Step 5:** Type **del /s**.

**Note:** Don't forget to add (.) after /s

**Step 6:** Keep pressing **Y** until you are prompted to delete all the files in the folder.

```

C:\WINDOWS\system32\cmd.exe - del /s .
09/12/2008 04:05 PM          77,890 NUSrtp.dll
08/28/2008 09:01 PM           1,400 NUSWebAll.inf
12/09/2005 04:22 PM       309,488 P00RecImage.dll
08/28/2008 08:05 PM          49,152 parsedatapacket.dll
08/28/2007 02:24 PM       333,712 pmjpegaudio.ocx
10/03/2007 08:41 AM       382,864 pmjpegcam.ocx
11/30/2005 05:26 PM          76,024 ProfileAccess.dll
09/24/2008 12:02 PM     2,782,536 RACtrl.dll
09/24/2008 11:58 AM          663 RACtrl.inf
08/25/2008 12:07 PM          77,894 rtp.dll
06/06/2007 09:54 AM       843,776 RtspUappDecoder.dll
12/14/2007 07:12 PM       947,712 RtspUappDecoderNew.dll
01/17/2007 02:50 PM          897 setup.inf
10/04/2008 08:08 PM          247 swflash.inf
07/18/2007 02:54 PM       245,408 unicows.dll
03/30/2005 10:18 AM       408,064 UAPGDecoder.dll
09/13/2007 01:26 PM       827,392 UADecoder.dll
09/11/2008 09:57 PM       643,147 WebRPB.ocx
08/21/2008 02:27 PM          1,072 WebViewS.inf
09/11/2008 09:54 PM       446,542 WebViewS.ocx
          39 File(s)      16,144,897 bytes
          0 Dir(s)      2,410,991,616 bytes free
C:\WINDOWS\Downloaded Program Files> del /s .
C:\WINDOWS\Downloaded Program Files>*, Are you sure (Y/N)?
  
```

**Step 7:** Type `rmdir /s .`

**Step 8:** Continue pressing **Y** when prompted to clear up the remaining files in the folder

**Step 9:** Type `dir` and press **Enter** to check if the folder is empty.

**Step 10:** Re-install your ActiveX with web remote client.

15. What default ports are used for network service?

The default ports can be changed, but we strongly recommend you avoid using ports below 1024 because they are often used by other system services.

Service	Port	Purpose
Live streaming	5150	Communication between desktop remote live viewer and Main Console
Default web server	80	Access protocol of web based remote client

Remote playback	5160	Communication between desktop remote playback and Main Console
Remote desktop	5140	Remote access to Main Console

16. How to enable audio for the remote live viewer application and Internet Explorer browser?

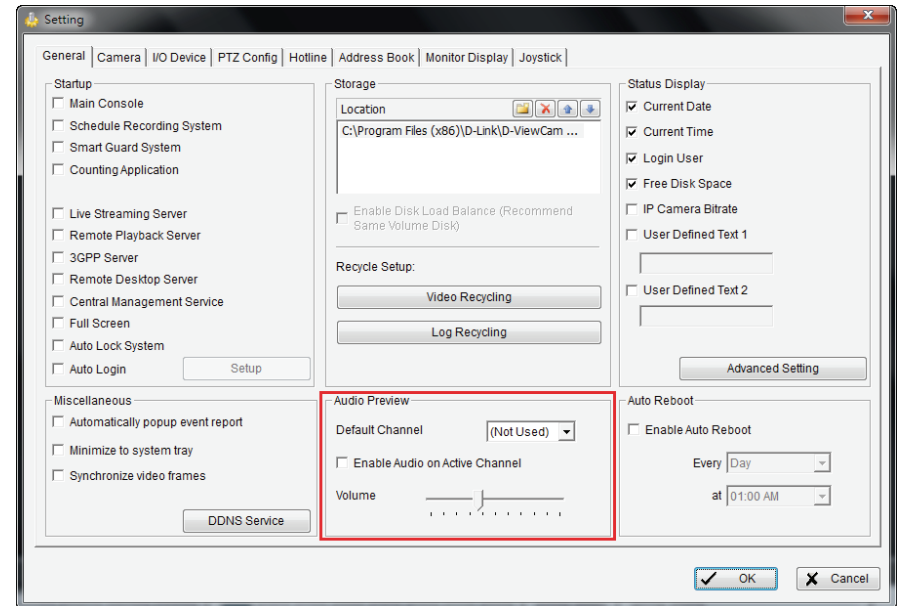

Please right click on the screen and select **Enable Audio**.

If you are using network cameras, go to **Main Console > General Setting > Setting > Camera > Camera Settings**.

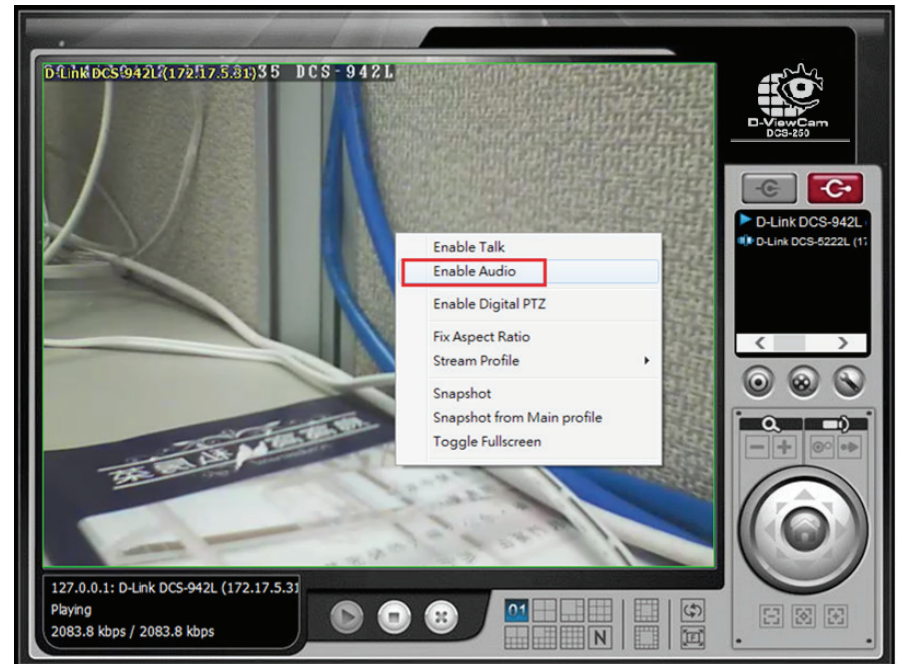

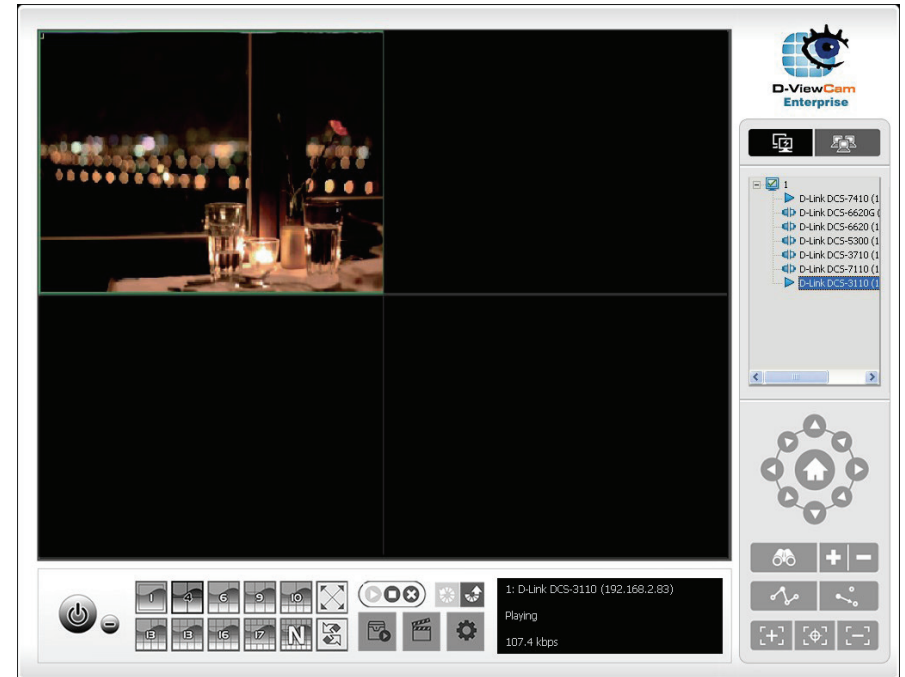

Right click on the screen and select **Enable Audio**.

If you are using analog cameras, please go to **Main Console > General Setting > Setting > Audio Preview**.

Go to remote live viewer and right click on the screen to check **Enable Audio**.

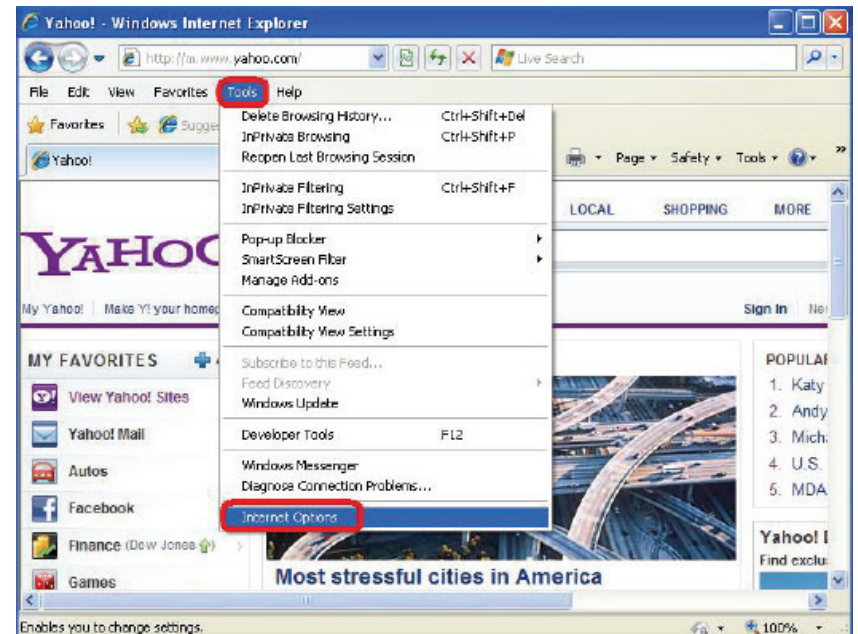

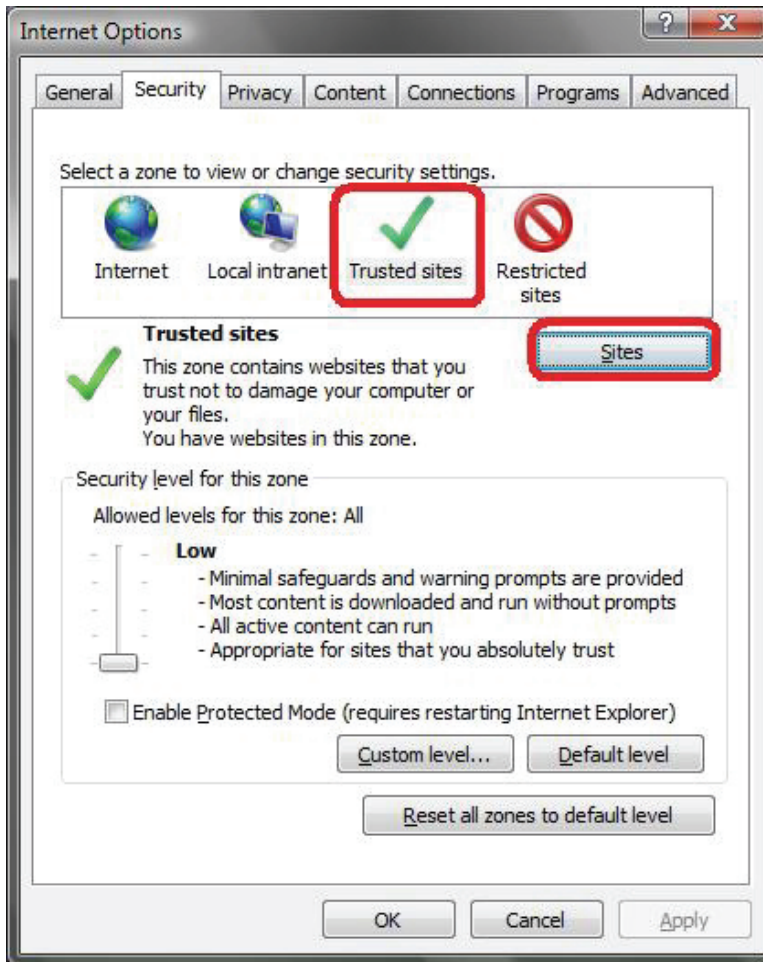

### 17. Why Internet Explorer 8 doesn't work well with software version 3.0?

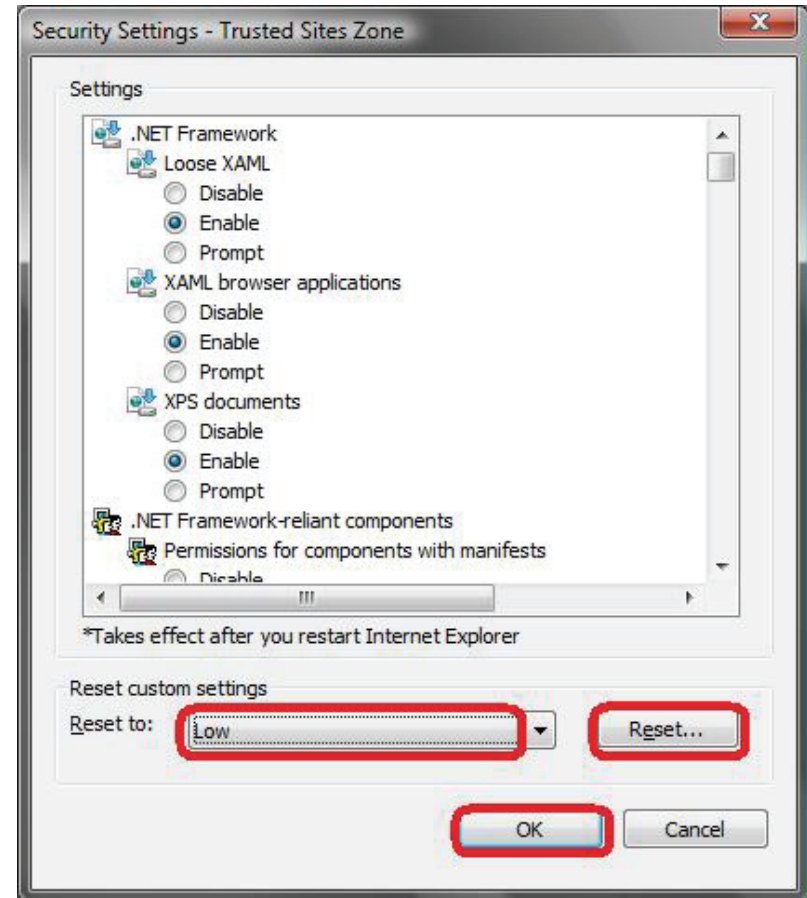

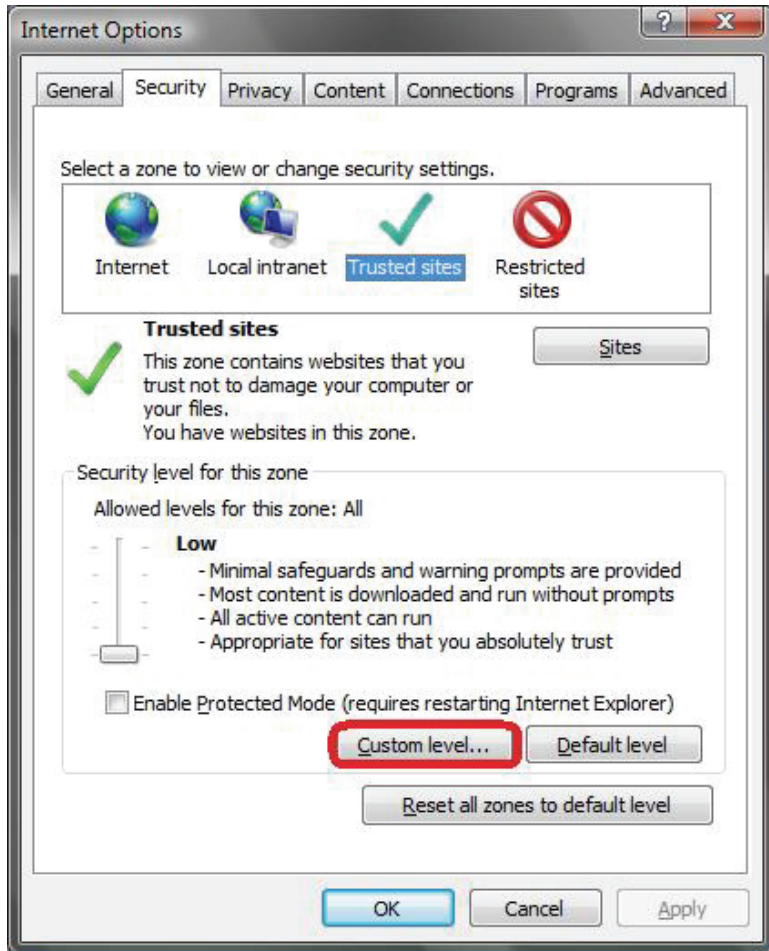

In order to install ActiveX in an IE 8 environment, we need to set up the following.

Ensure **vcredist\_x86.exe** has already been installed.

**Step 1:** Add the Server IP into Trusted Web Site.

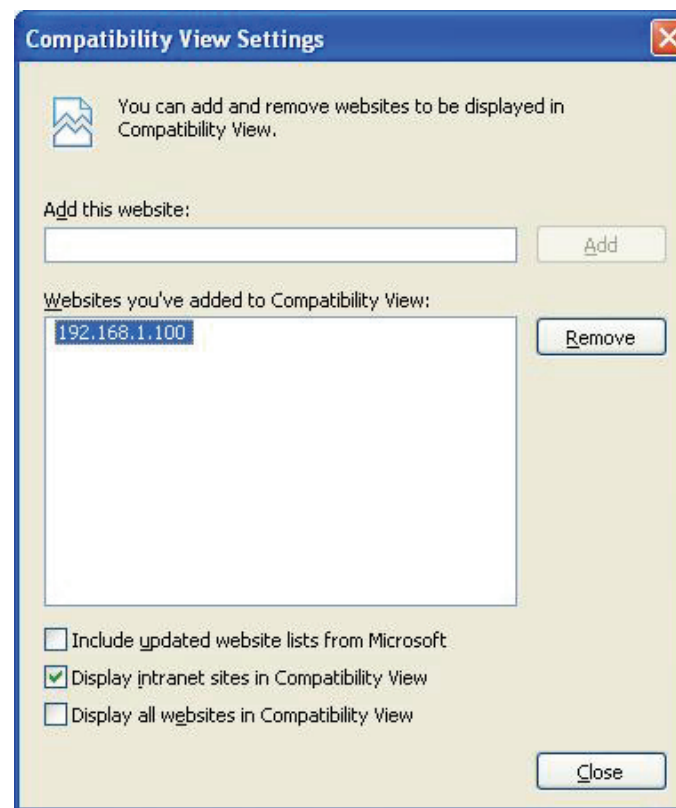

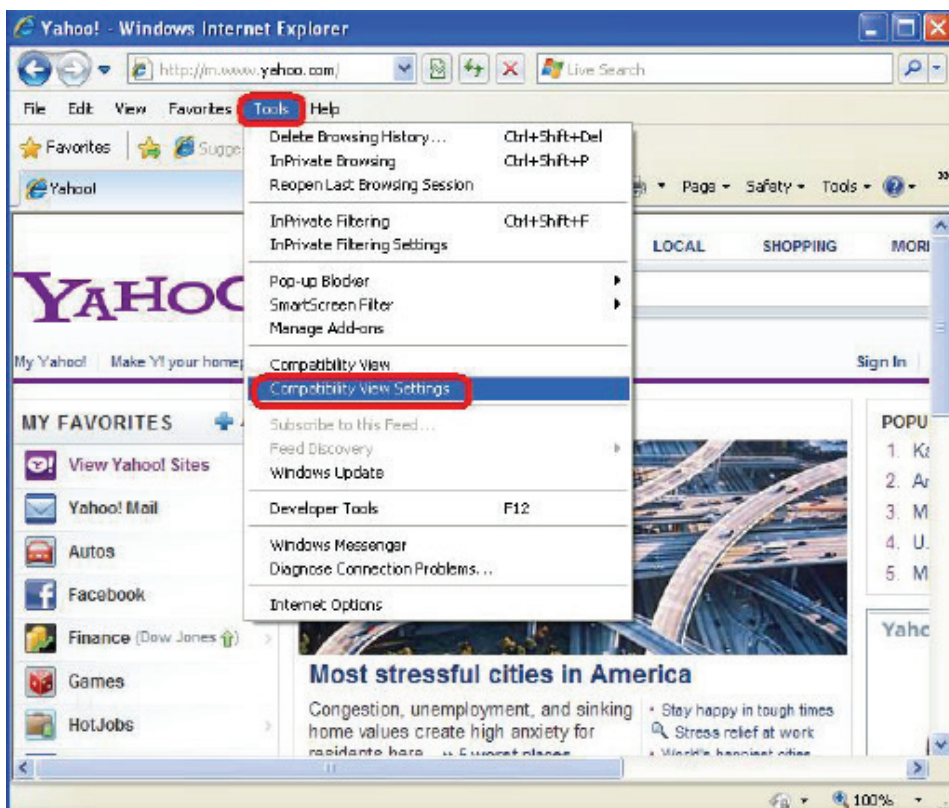

**Step 2:** Go to **Tools > Compatibility View Settings** and add the Server IP Compatibility View Setting.

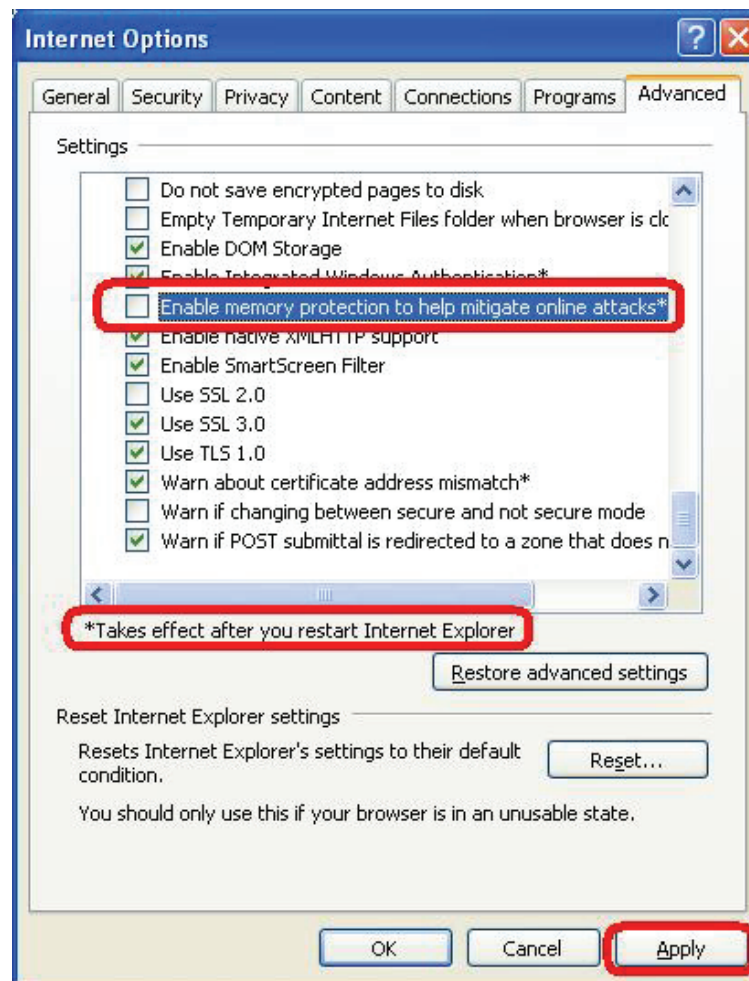

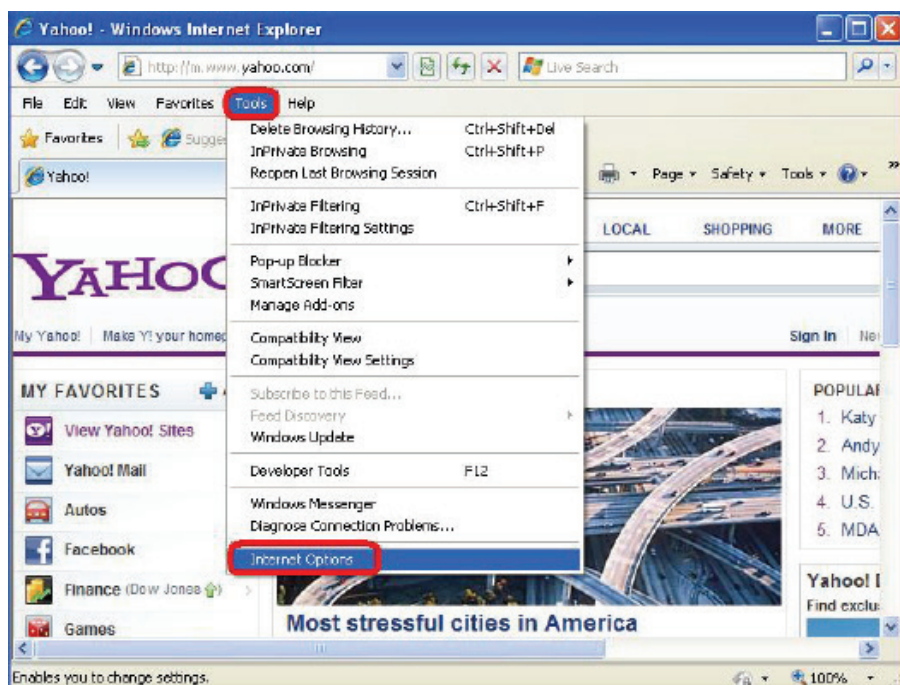

Step 2: Add the Server IP Compatibility View Setting

Enjoy 3.2 web live viewer with Internet Explorer 8.

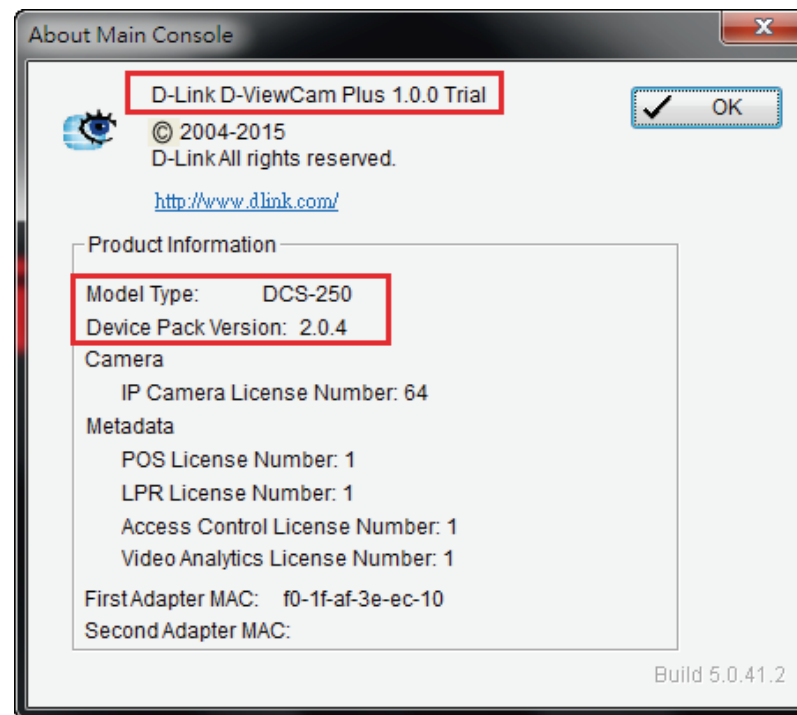

**Step 3:** If the instructions above doesn't work, please try the following method. (Optional)

18. What is the version of my software?

Go to **Main Console > General Setting > About Mainconsole.**

19. How do I get the Windows system log and application log?

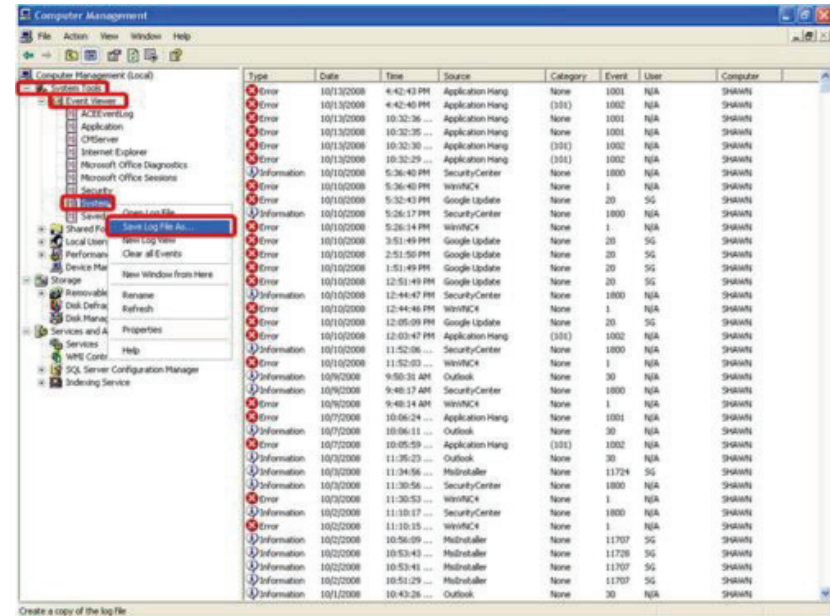

**System log**

**Step 1:** Go to **Desktop > right click on My Computer > Manage.**

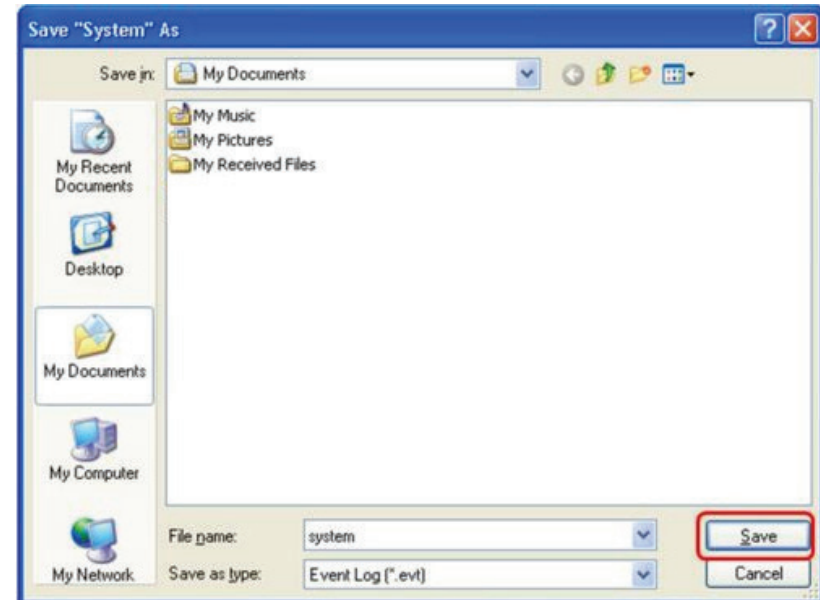

**Step 2:** In Computer Management, go to **System Tools > Event Viewer > System.**

**Step 3:** Right click on **System** > **Save Log File As...**

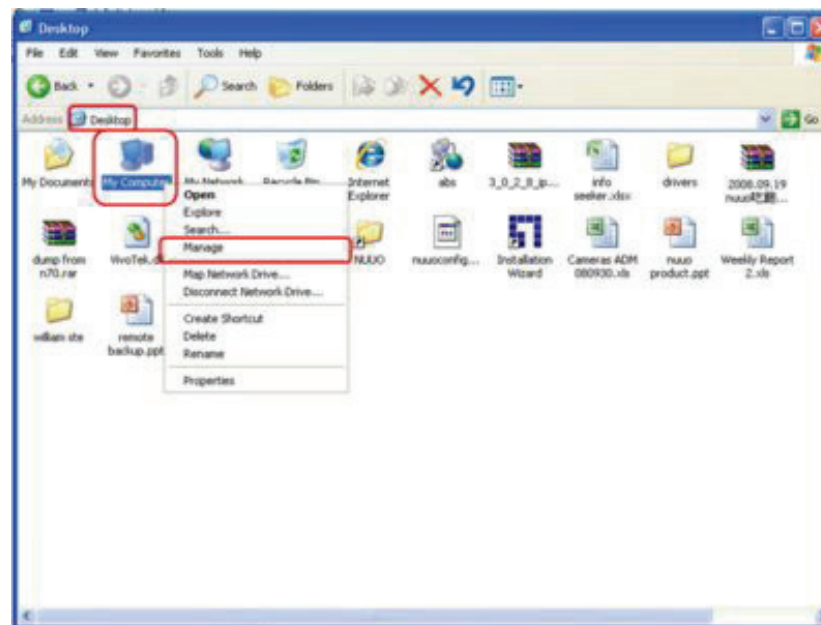

**Step 4:** Type **system** as file name and save file as .evt format  
Please name the file as **system** so we know that it is a system log file.

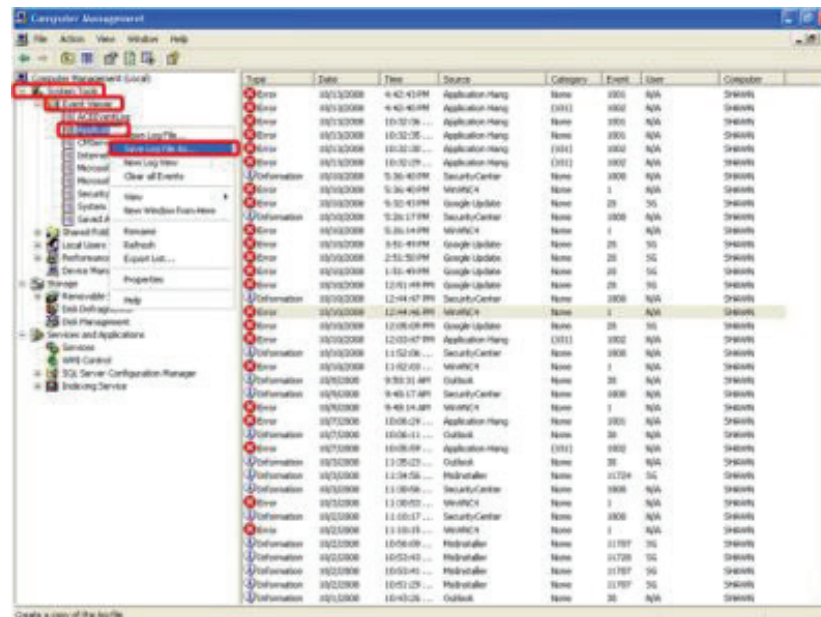

## Application Log

**Step 1:** Go to **Desktop** > right click on **My Computer** > **Manage**.

**Step 2:** In **Computer Management** > **System Tools** > **Event Viewer** > **Application**.

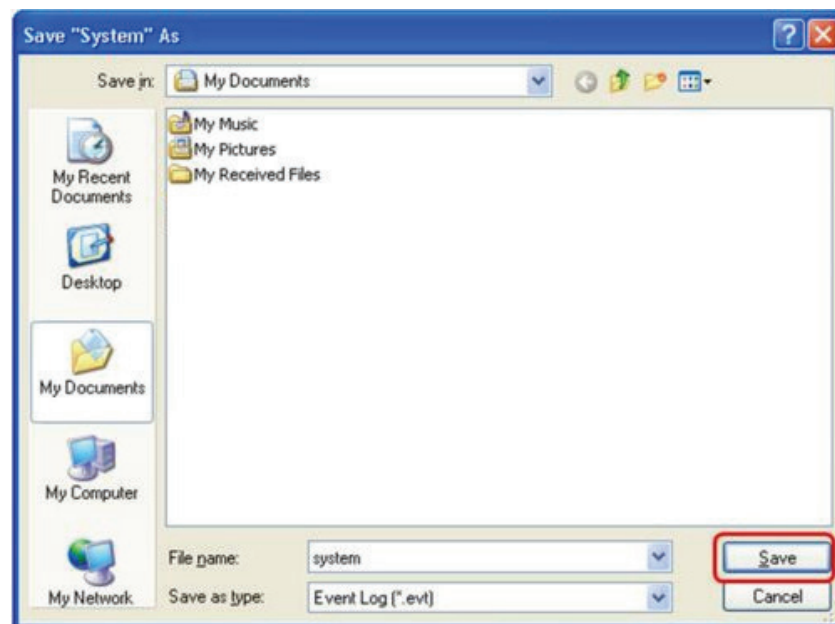

**Step 3:** Right click on **Application** > **Save Log File As...**

**Step 4:** Type **application** as file name and save file in .evt format.

**Note:** Please name the file as **application** so we know that it is an application log file.

20. How many user accounts can I create?

You can create an unlimited number of user accounts.

21. How do I setup local area network?

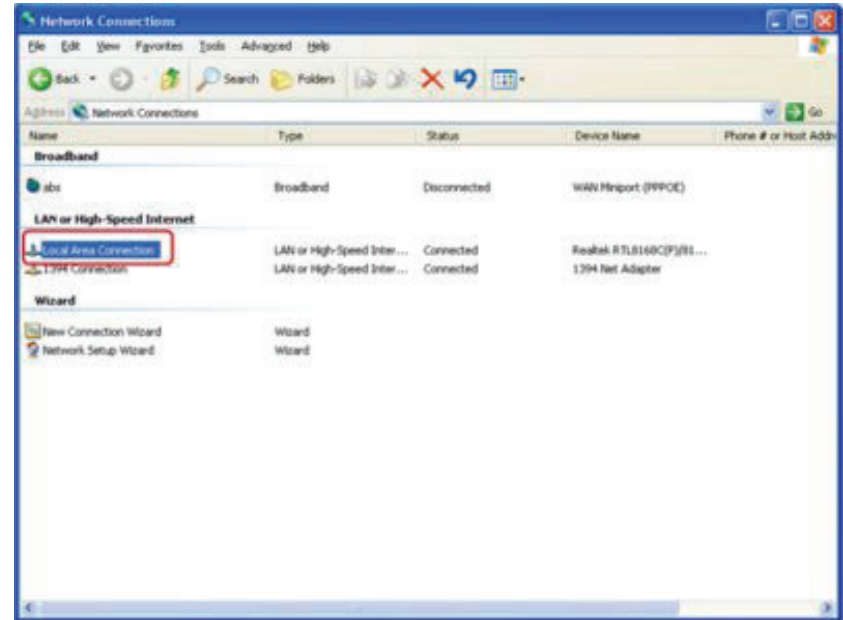

D-ViewCam Plus supports both LAN and WAN. If your surveillance system does not have Internet access, you can setup a private network or LAN to establish networking between Mainconsole and other network devices such as an IP camera.

#### Setup with static IP

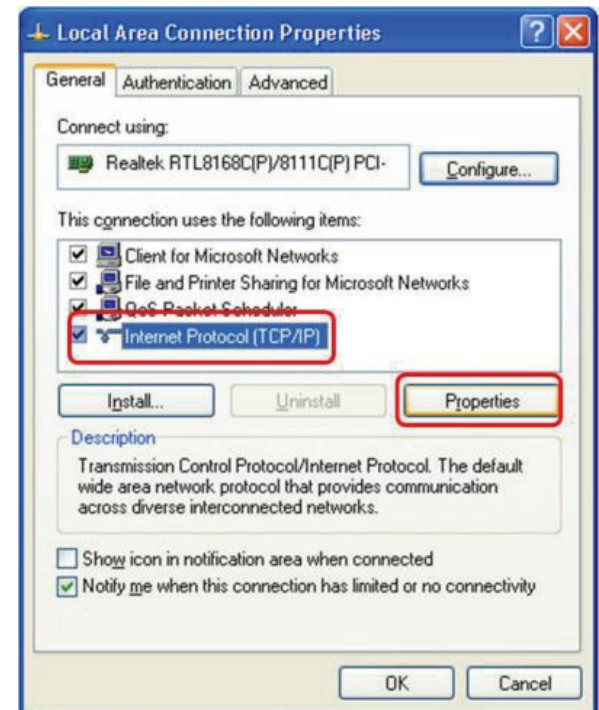

**Step 1:** Go to **Control Panel > Network Connections**.

**Step 2:** Right click on **Local Area Connection** > **Properties**.

**Step 3:** Select **Internet Protocol(TCP/IP)** > **Properties**.

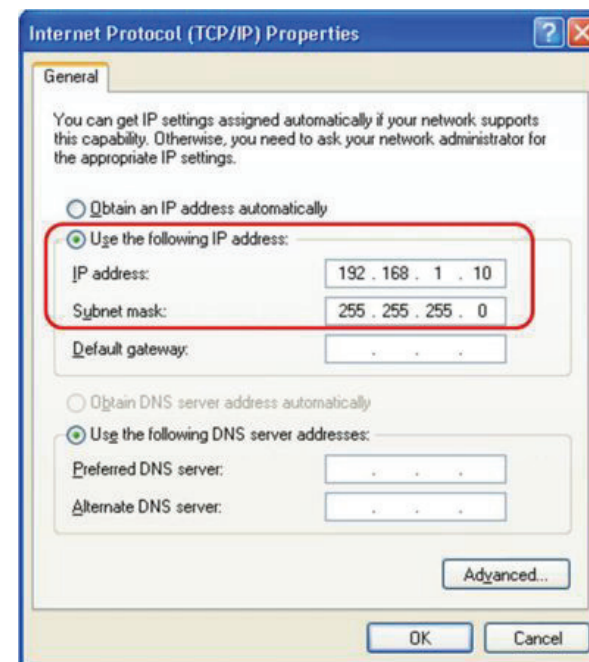

**Step 4:** Select **Use the following IP address** and update the fields as shown in the picture. [192.168.1.1] and [192.168.1.254] is normally occupied by the router or other network devices, so please try to avoid using these IP addresses.

Please note that you will only be able to access IP addresses between the same subnet address, such as [192.168.1.1 to 192.168.1.254].

### Setup with dynamic IP

We strongly discourage assigning dynamic IP address to IP cameras that are based on DHCP. The IP address of each IP camera is temporary so whenever the address is reassigned, the camera will lose connection permanently to your D-ViewCam Plus server unless you manually rematch the camera's new IP address to D-ViewCam Plus server.

22. What type of network does the D-ViewCam Plus support?

D-ViewCam Plus supports both LAN and WAN. If your surveillance system does not have Internet access, you can setup a private network or LAN to establish connection between the Main Console and other network devices such as network camera.

# Open Source Software Notification

D-ViewCam Plus product makes use of the following software licensed under LGPL (Lesser General Public License). You can download the copies of the LGPL licensed software from the official web site listed as the following.

## **1.1 LIVE555 Streaming Media ([www.live555.com/liveMedia/](http://www.live555.com/liveMedia/), GPL v2)**

© 1991, 1999 Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

## **1.2 ffmpeg v51.46.0 ([www.ffmpeg.org](http://www.ffmpeg.org), GPL v2)**

## **TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION**

This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called “this License”). Each licensee is addressed as “you”.

A “library” means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The “Library”, below, refers to any such software library or work which has been distributed under these terms. A “work based on the Library” means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term “modification”.)

“Source code” for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library’s complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) The modified work must itself be a software library.
- b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
- c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
- d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a “work that uses the Library”. Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a “work that uses the Library” with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a “work that uses the library”. The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a “work that uses the Library” uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a “work that uses the Library” with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer’s own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

- a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable “work that uses the Library”, as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)
- b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user’s computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.
- c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.
- d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.
- e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the “work that uses the Library” must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library

facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and “any later version”, you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

## NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

2. Expat XML parser v2.0.1 ([expat.sourceforge.net](http://expat.sourceforge.net))

© 1998, 1999, 2000 Thai Open Source Software Center Ltd and Clark Cooper

© 2001, 2002, 2003, 2004, 2005, 2006 Expat maintainers.

4. Crypto++ v5.5.2 ([www.cryptopp.com](http://www.cryptopp.com))

© 1995-2006 by Wei Dai. All rights reserved.

This copyright applies only to this software distribution package as a compilation, and does not imply a copyright on any particular file in the package.

The following files are copyrighted by their respective original authors, and their use is subject to additional licenses included in these files.

`mars.cpp` - Copyright 1998 Brian Gladman.

All other files in this compilation are placed in the public domain by Wei Dai and other contributors.

I would like to thank the following authors for placing their works into the public domain:

Joan Daemen - `3way.cpp`

Leonard Janke - `cast.cpp`, `seal.cpp`

Steve Reid - `cast.cpp`

Phil Karn - `des.cpp`

Michael Paul Johnson - `diamond.cpp`

Andrew M. Kuchling - `md2.cpp`, `md4.cpp`

Colin Plumb - `md5.cpp`, `md5mac.cpp`

Seal Woods - `rc6.cpp`

Chris Morgan - `rijndael.cpp`

Paulo Baretto - `rijndael.cpp`, `skipjack.cpp`, `square.cpp`

Richard De Moliner - `safer.cpp`

Matthew Skala - twofish.cpp

Kevin Springle - camellia.cpp, shacal2.cpp, ttmac.cpp, whirlpool.cpp, ripemd.cpp

Permission to use, copy, modify, and distribute this compilation for any purpose, including commercial applications, is hereby granted without fee, subject to the following restrictions:

1. Any copy or modification of this compilation in any form, except in object code form as part of an application software, must include the above copyright notice and this license.
2. Users of this software agree that any modification or extension they provide to Wei Dai will be considered public domain and not copyrighted unless it includes an explicit copyright notice.
3. Wei Dai makes no warranty or representation that the operation of the software in this compilation will be error-free, and Wei Dai is under no obligation to provide any services, by way of maintenance, update, or otherwise. THE SOFTWARE AND ANY DOCUMENTATION ARE PROVIDED "AS IS" WITHOUT EXPRESS OR IMPLIED WARRANTY INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT WILL WEI DAI OR ANY OTHER CONTRIBUTOR BE LIABLE FOR DIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.
4. Users will not use Wei Dai or any other contributor's name in any publicity or advertising, without prior written consent in each case.
5. Export of this software from the United States may require a specific license from the United States Government. It is the responsibility of any person or organization contemplating export to obtain such a license before exporting.
6. Certain parts of this software may be protected by patents. It is the users' responsibility to obtain the appropriate licenses before using those parts.

If this compilation is used in object code form in an application software, acknowledgement of the author is not required but would be appreciated. The contribution of any useful modifications or extensions to Wei Dai is not required but would also be appreciated.
