D-Link®

Wireless Services Router
User Manual

DSR-150/150N/250/250N/500/1000/500AC/1000AC

Version 3.04 | May 26, 2016

Preface

The information in this document is subject to change without notice. The manufacturer makes no representations or warranties with respect to the contents hereof and specifically disclaim any implied warranties of merchantability or fitness for any particular purpose. The manufacturer reserves the right to revise this publication and to make changes from time to time in the content hereof without obligation of the manufacturer to notify any person of such revision or changes.

Manual Revisions

Revision	Date	Description
2.00	July 31, 2014	• DSR Products with firmware version 2.00
2.01	November 17, 2014	• Added License Update section
2.02	January 28, 2015	• DSR Products with firmware version 2.02
3.02	May 06, 2015	• Added new DSR series models DSR-500AC and DSR-1000AC
3.04	May 26, 2016	• Updated regulatory statements, removed DSR-500N and DSR-1000N

Trademarks/Copyright Notice

D-Link and the D-Link logo are trademarks or registered trademarks of D-Link Corporation or its subsidiaries in the United States or other countries. All other company or product names mentioned herein are trademarks or registered trademarks of their respective companies.

© 2016 D-Link Corporation, All Rights Reserved

This publication, including all photographs, illustrations and software, is protected under international copyright laws, with all rights reserved. Neither this manual, nor any of the material contained herein, may be reproduced without written consent of the author.

Limitations of Liability

UNDER NO CIRCUMSTANCES SHALL D-LINK OR ITS SUPPLIERS BE LIABLE FOR DAMAGES OF ANY CHARACTER (E.G. DAMAGES FOR LOSS OF PROFIT, SOFTWARE RESTORATION, WORK STOPPAGE, LOSS OF SAVED DATA OR ANY OTHER COMMERCIAL DAMAGES OR LOSSES) RESULTING FROM THE APPLICATION OR IMPROPER USE OF THE D-LINK PRODUCT OR FAILURE OF THE PRODUCT, EVEN IF D-LINK IS INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. FURTHERMORE, DLINK WILL NOT BE LIABLE FOR THIRD-PARTY CLAIMS AGAINST CUSTOMER FOR LOSSES OR DAMAGES. D-LINK WILL IN NO EVENT BE LIABLE FOR ANY DAMAGES IN EXCESS OF THE AMOUNT D-LINK RECEIVED FROM THE END-USER FOR THE PRODUCT.

Safety Instructions

Use the following safety guidelines to ensure your own personal safety and to help protect your system from potential damage.

Safety Cautions

To reduce the risk of bodily injury, electrical shock, fire, and damage to the equipment, observe the following precautions:

- Observe and follow service markings.
    - Do not service any product except as explained in your system documentation.
    - Opening or removing covers that are marked with the triangular symbol with a lightning bolt may expose you to electrical shock.
    - Only a trained service technician should service components inside these compartments.
- If any of the following conditions occur, unplug the product from the electrical outlet and replace the part or contact your trained service provider:
    - The power cable, extension cable, or plug is damaged.
    - An object has fallen into the product.
    - The product has been exposed to water.
    - The product has been dropped or damaged.
    - The product does not operate correctly when you follow the operating instructions.
- Keep your system away from radiators and heat sources. Also, do not block cooling vents.
- Do not spill food or liquids on your system components, and never operate the product in a wet environment. If the system gets wet, see the appropriate section in your troubleshooting guide or contact your trained service provider.
- Do not push any objects into the openings of your system. Doing so can cause fire or electric shock by shorting out interior components.
- Use the product only with approved equipment.
- Allow the product to cool before removing covers or touching internal components.
- Operate the product only from the type of external power source indicated on the electrical ratings label. If you are not sure of the type of power source required, consult your service provider or local power company.
- Also, be sure that attached devices are electrically rated to operate with the power available in your location.
- Use only approved power cable(s). If you have not been provided with a power cable for your system or for any AC powered option intended for your system, purchase a power cable that is approved for use in your country. The power cable must be rated for the product and for the voltage and current marked on the product's electrical ratings label. The voltage and current rating of the cable should be greater than the ratings marked on the product.
- To help prevent electric shock, plug the system and peripheral power cables into properly grounded electrical outlets.

- These cables are equipped with three-prong plugs to help ensure proper grounding. Do not use adapter plugs or remove the grounding prong from a cable. If you must use an extension cable, use a 3-wire cable with properly grounded plugs.

- Observe extension cable and power strip ratings. Make sure that the total ampere rating of all products plugged into the extension cable or power strip does not exceed 80 percent of the ampere ratings limit for the extension cable or power strip.

- To help protect your system from sudden, transient increases and decreases in electrical power, use a surge suppressor, line conditioner, or uninterruptible power supply (UPS).

- Position system cables and power cables carefully; route cables so that they cannot be stepped on or tripped over. Be sure that nothing rests on any cables.

- Do not modify power cables or plugs. Consult a licensed electrician or your power company for site modifications.

- Always follow your local/national wiring rules.

- When connecting or disconnecting power to hot-pluggable power supplies, if offered with your system, observe the following guidelines:

    - Install the power supply before connecting the power cable to the power supply.

    - Unplug the power cable before removing the power supply.

    - If the system has multiple sources of power, disconnect power from the system by unplugging all power cables from the power supplies.

- Move products with care; ensure that all casters and/or stabilizers are firmly connected to the system. Avoid sudden stops and uneven surfaces.

Protecting Against Electrostatic Discharge

Static electricity can harm delicate components inside your system. To prevent static damage, discharge static electricity from your body before you touch any of the electronic components, such as the microprocessor. You can do so by periodically touching an unpainted metal surface on the chassis.

You can also take the following steps to prevent damage from electrostatic discharge (ESD):

1. When unpacking a static-sensitive component from its shipping carton, do not remove the component from the antistatic packing material until you are ready to install the component in your system. Just before unwrapping the antistatic packaging, be sure to discharge static electricity from your body.

2. When transporting a sensitive component, first place it in an antistatic container or package.

3. Handle all sensitive components in a static-safe area. If possible, use antistatic floor pads, workbench pads and an antistatic grounding strap.

Power Usage
All Models

This device is an Energy Related Product (ErP) with High Network Availability (HiNA), and automatically switches to a power-saving Network Standby mode within 1 minute of no packets being transmitted. It can also be turned off through a power switch to save energy when it is not needed.

DSR-150
Network Standby: 6.91 watts
Switched Off: 0.13 watts

DSR-500
Network Standby: 6.93 watts
Switched Off: 0.08 watts

DSR-150N
Network Standby: 7.86 watts
Switched Off: 0.13 watts

DSR-1000
Network Standby: 7.12 watts
Switched Off: 0.07 watts

DSR-250
Network Standby: 7.86 watts
Switched Off: 0.13 watts

DSR-500AC
Network Standby: 6.68 watts
Switched Off: 0.07 watts

DSR-250N
Network Standby: 6.23 watts
Switched Off: 0.13 watts

DSR-1000AC
Network Standby: 7.96 watts
Switched Off: 0.07 watts

DSR-500/DSR-1000/DSR-500AC/DSR-1000AC

EU Battery & WEEE Directives Disposal and Recycling

This product may contain a battery. Recycle or dispose of batteries in accordance with the battery manufacturer's instructions and local/national disposal and recycling regulations. For more information, please refer to the warranty guide.

Table of Contents

Introduction

D-Link Services Routers offer a secure, high performance networking solution to address the growing needs of small and medium businesses. Integrated high-speed IEEE 802.11n/ac and 3G wireless technologies offer comparable performance to traditional wired networks, but with fewer limitations. Optimal network security is provided via features such as virtual private network (VPN) tunnels, IP Security (IPsec), Point-to-Point Tunneling Protocol (PPTP), Layer 2 Tunneling Protocol (L2TP), and Secure Sockets Layer (SSL). Empower your road warriors with clientless remote access anywhere and anytime using SSL VPN tunnels.

With the D-Link Services Router you are able to experience a diverse set of benefits:

- **Comprehensive Management Capabilities**
  The DSR-500, DSR-1000, DSR-500AC, and DSR-1000AC include dual-WAN Gigabit Ethernet which provides policy-based service management ensuring maximum productivity for your business operations. The failover feature maintains data traffic without disconnecting when a landline connection is lost. The Outbound Load Balancing feature adjusts outgoing traffic across two WAN interfaces and optimizes the system performance resulting in high availability. The solution supports configuring a port as a dedicated DMZ port allowing you to isolate servers from your LAN.

  Note: DSR-150/150N/250/250N product have a single WAN interface, and thus it does not support Auto Failover and Load Balancing scenarios.

- **Superior Wireless Performance**
  Next generation wireless performance is available on the DSR-500AC and DSR-1000AC, which introduce 802.11AC support to the family. Available on the 5 GHz band, the combination of wider RF bandwidths and up to 8 MIMO streams take data rates available to supporting AC clients to the next level.

  Note: DSR-150N and DSR-250N support the 2.4GHz radio band only.

- **Flexible Deployment Options**
  The DSR series supports Third Generation (3G) Networks via an extendable USB 3G dongle. This 3G network capability offers an additional secure data connection for networks that provide critical services. The product can be configured to automatically switch to a 3G network whenever a physical link is lost.

- **Robust VPN features**
  A fully featured virtual private network (VPN) provides your mobile workers and branch offices with a secure link to your network. The DSR products are capable of simultaneously managing 5, 5, 10, 20 Secure Sockets Layer (SSL) VPN tunnels respectively, empowering your mobile users by providing remote access to a central corporate database. Site-to-site VPN tunnels use IP Security (IPsec) Protocol, Point-to-Point Tunneling Protocol (PPTP), or Layer 2 Tunneling Protocol (L2TP) to facilitate branch office connectivity through encrypted virtual links. The DSR-150/150N, DSR-250/250N, DSR-500/500N and DSR-1000/1000N support 10, 25, 35 and 100 simultaneous IPsec VPN tunnels respectively. The DSR-500AC and DSR-1000AC support 35 and 100 simultaneous IPsec VPN tunnels respectively.

- **Efficient D-Link Green Technology**
  As a concerned member of the global community, D-Link is devoted to providing eco-friendly products. D-Link Green Wi-Fi and D-Link Green Ethernet save power and prevent waste. The D-Link Green WLAN scheduler reduces wireless power automatically during off-peak hours. Likewise the D-Link Green Ethernet program adjusts power usage based on the detected cable length and link status. In addition, compliance with RoHS (Restriction of Hazardous Substances) and WEEE (Waste Electrical and Electronic Equipment) directives make D-Link Green certified devices the environmentally responsible choice.

Installation

This section provides information and steps on how to connect your DSR router to your network.

Before you Begin

Observe the following precautions to help prevent shutdowns, equipment failures, and injuries:
- Ensure that the room in which you operate the device has adequate air circulation and that the room temperature does NOT exceed 40°C (104°F).
- Allow 1 meter (3 feet) of clear space to the front and back of the device.
- Do NOT place the device in an equipment rack frame that blocks the air vents on the sides of the chassis. Ensure that enclosed racks have fans and louvered sides.
- Before installation, please correct these hazardous conditions: moist or wet floors, leaks, ungrounded or frayed power cables, or missing safety grounds.

Connect to your Network

This section provides basic information about physically connecting the DSR-250 to a network.

1. Connect an Ethernet cable from the port labeled WAN to the external router or modem. The port WAN is pre-allocated to the WAN network segment.
2. Connect an Ethernet cable from one of the LAN ports to a switch or a computer in the LAN network segment.
3. Connect an RJ45-to-DB9 cable from the console port for CLI (Command Line Interface) management access (optional).

Note: *Refer to the Quick Installation Guide included with your router for more information on network connectivity, port, and LED information.*

Basic Configuration

After you install the router, perform the basic configuration instructions described in this section which includes:

- "#1 Log in to the Web UI" on page 5
- "#2 Change LAN IP Address" on page 6
- "#3 Configure DHCP Server" on page 7
- "#4 Set Time and Date" on page 8
- "#5 Internet Connection Setup" on page 9
- "#6 Wireless Network Setup" on page 12
- "#7 Create Users" on page 13
- "#8 Security/VPN Wizard" on page 14
- "#9 Dynamic DNS Wizard" on page 16

#1 Log in to the Web UI

The LAN connection may be through the wired Ethernet ports available on the router, or once the initial setup is complete, the DSR may also be managed through its wireless interface. Access the router's Web user interface (Web UI) for management by using any web browser, such as Internet Explorer, Firefox, Chrome, or Safari.

Note: *The workstation from which you manage the router must be in the same subnet as the router (192.169.10.0/24).*

To access the device with the Web UI:

1. Connect your workstation to an available LAN port on the router.
2. Ensure your workstation has DHCP enabled or is assigned a static IP address within the 192.168.10.0/24 subnet.

    Note: *Disable pop-up blocking software or add the management IP address http://192.168.10.1 to your pop-up blocker's allow list.*

3. Launch a browser, enter the IP address for the LAN interface (default = **http://192.168.10.1**), and then press **Enter**.
4. Enter your username (default = **admin**) and your password (default = **admin**), then click **Login**.
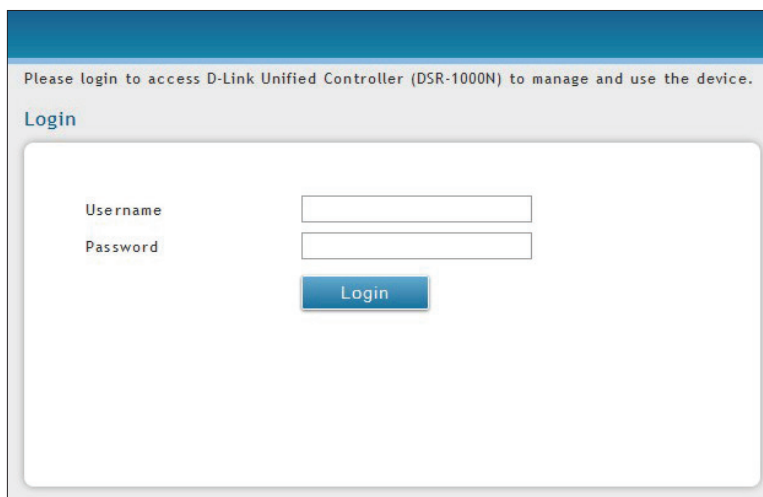

5. The web management interface opens with the Status > Dashboard page. This page displays general, LAN, and WLAN status information. You can return to this page at any time by clicking Status > Dashboard.

#2 Change LAN IP Address

To change the LAN IP address of the router, follow the steps below:

1. Log in to the router.
2. Click **Network** > **LAN** > **LAN Settings**. The LAN Settings page will appear.

3. Under *IP Address Setup*, enter a new IP address for the router.
4. Enter a new subnet mask if needed.
5. Click **Save** at the bottom of the page.

Note: *If you change the IP address and click Save, the Web UI will not respond. Open a new connection to the <u>new</u> IP address and log in again. Be sure the LAN host (the machine used to manage the router) has obtained an IP address from newly assigned pool (or has a static IP address in the router's LAN subnet) before accessing the router via changed IP address.*

#3 Configure DHCP Server

To change the DHCP settings of the router, follow the steps below:

1. Log in to the router.
2. Click **Network** > **LAN** > **LAN Settings**. The LAN Settings page will appear.

3. From the *DHCP Mode* drop-down menu under *DHCP Setup*, select **None** (disable), **DHCP Server** (enable), or **DHCP Relay**.

   Note: *DHCP Relay will allow DHCP clients on the LAN to receive IP address leases and corresponding information from a DHCP server on a different subnet. When LAN clients make a DHCP request it will be passed along to the server accessible via the Relay Gateway IP address you enter.*

4. If enabled, fill in the following fields:

Field	Description
Starting IP Address	Enter the starting IP address in the DHCP address pool. Any new DHCP client joining the LAN is assigned an IP address within the starting and ending IP address range. Starting and ending IP addresses should be in the same IP address subnet as the wireless controller's LAN IP address.
Ending IP Address	Enter the ending IP address in the DHCP address pool.
Default Gateway	By default this setting is router's LAN IP address. It can be customized to any valid IP within the LAN subnet, in the event that the network's gateway is not this router. The DHCP server will give the configured IP address as the Default Gateway to its DHCP clients.
Domain Name	Enter a domain name.
Lease Time	Enter the time, in hours, for which IP addresses are leased to clients.
Configure DNS/WINS	Toggle to **On** and enter DNS and/or WINS server IP address(es).

5. Click **Save** at the bottom of the page.

#4 Set Time and Date

1. Log in to the router.
2. Click **Wizard** in the upper-right side of the page. If you want to manually configure your date/time settings, refer to "Date and Time" on page 164.
3. Click **Run** in the *Date and Time Wizard* box.
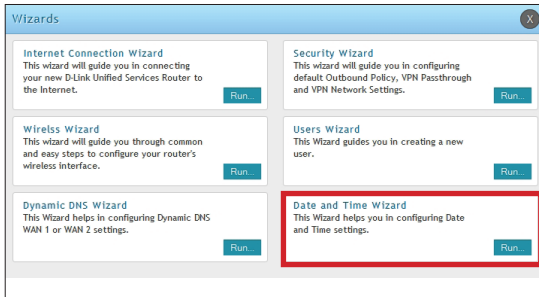

4. Click the continent from the map and then next to *City*, select your time zone from the drop-down menu. Toggle Daylight Saving to **ON** if it applies to you and then click **Next**.
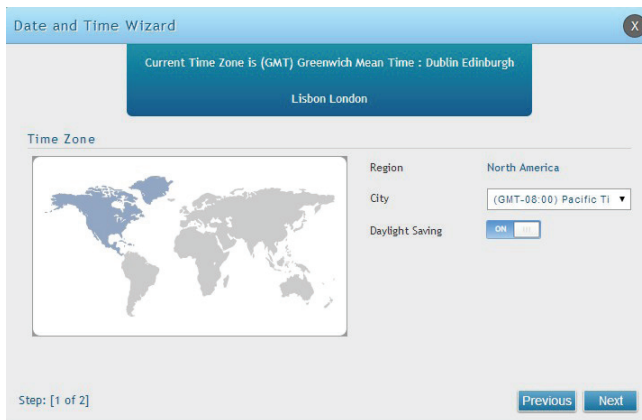

5. Toggle NTP server to ON to use a time server or toggle to OFF to manually enter the time and date.
6. If you selected ON, select either **Default** or **Custom** from the drop-down menu. If you selected Custom, enter a primary and secondary NTP server address.
7. Enter the time to synchronize with the NTP server and click **Save**.
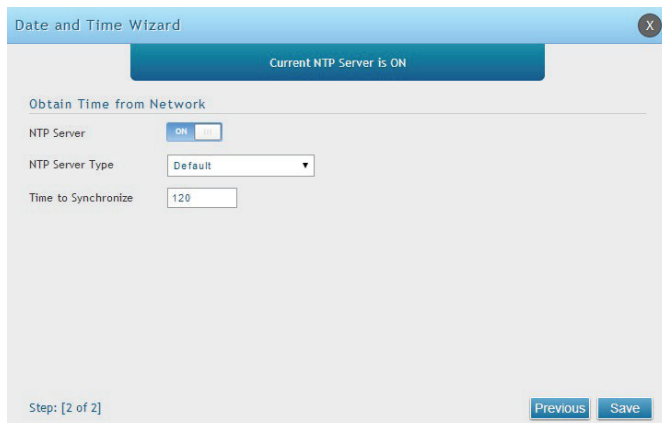

8. A summary page will appear. Verify your settings and then click **Finish**.

#5 Internet Connection Setup

This router has two WAN ports that can be used to establish a connection to the internet. It is assumed that you have arranged for internet service with your Internet Service Provider (ISP). Please contact your ISP or network administrator for the configuration information that will be required to setup the router. Supported Internet connection types include Dynamic, Static, PPPoE, PPTP, L2TP, Japanese PPPoE, and Russian PPPoE/PPTP/L2TP.

To configure your router to connect to the Internet, follow the steps below:

1. Log in to the router.
2. Click **Wizard** in the upper-right side of the page. If you want to manually configure your Internet settings, refer to "Connect to the Internet" on page 30.
3. Click **Run** in the *Internet Connection Wizard* box.
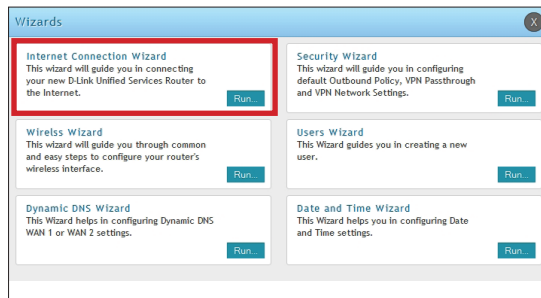

4. Toggle **On** next to either *DHCP* or *Static IP Address* and click **Next**. If your connection type is not listed, refer to "Connect to the Internet" on page 30.
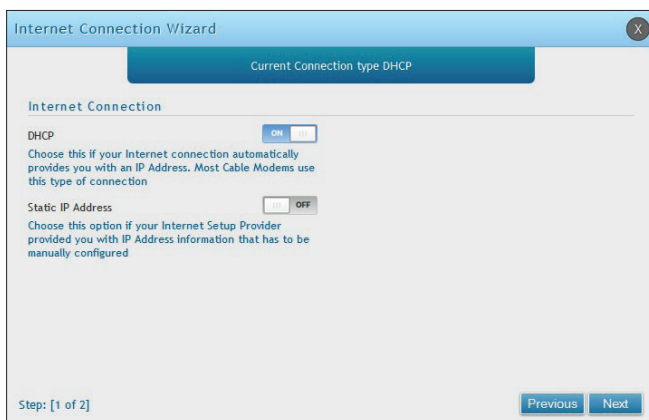

a. If you selected **DHCP**, complete the fields below:

Field	Description
MAC Address Source	This MAC address will be recognized by your ISP. Select from the following three options: • **Use Default Address** - Uses the default MAC address of the router. • **Clone your PC's MAC Address** - Select to use the MAC address of the computer you are currently connecting with. • **Use this MAC Address** - Select to manually enter a MAC address and enter the address in the box.
Host Name	Enter a host name if required by your ISP.
DNS Server Source	Select from the following two options: • **Get Dynamically from ISP** - Select to use the DNS servers assigned by your ISP. • **Use these DNS Servers** - Select to manually enter a primary and secondary DNS server address(es).

Skip to Step 5 on the bottom of the next page.

b. If you selected **Static**, complete the fields below:

Field	Description
IP Address	Enter the IP address assigned by your ISP.
Gateway IP Address	Enter the gateway IP address assigned by your ISP.
IP Subnet Mask	Enter the subnet mask assigned by your ISP.
Primary DNS Server	Enter the primary DNS server IP address assigned by your ISP.
Secondary DNS Server	Enter the secondary DNS server IP address assigned by your ISP.

5. Click **Save**. The router will reboot and attempt to connect to your ISP. Please allow one to two minutes to connect.

#6 Wireless Network Setup

This wizard provides a step-by-step guide to create and secure a new access point on the router. The network name (SSID) is the AP identifier that will be detected by supported clients. The Wizard uses a TKIP+AES cipher for WPA / WPA2 security; depending on support on the client side, devices associate with this AP using either WPA or WPA2 security with the same pre -shared key.

The wizard has the option to automatically generate a network key for the AP. This key is the pre-shared key for WPA or WPA2 type security. Supported clients that have been given this PSK can associate with this AP. The default (auto-assigned) PSK is "passphrase".

1. Log in to the router.
2. Click **Wizard** in the upper-right side of the page.
3. Click **Run** in the *Wireless Wizard* box.
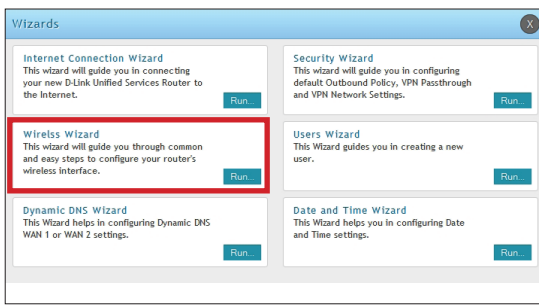

4. The wizard screen will appear.

5. Enter a SSID, which is the name of your wireless network.
6. Next to *Network Key Type*, select **Manual**.
7. Enter a password for the wireless network. Wireless devices connecting to this network must enter this password to connect. The password is case-sensitive.
8. Click **Save**.
9. A window will appear with a summary of your settings. Click **Finish**.

#7 Create Users
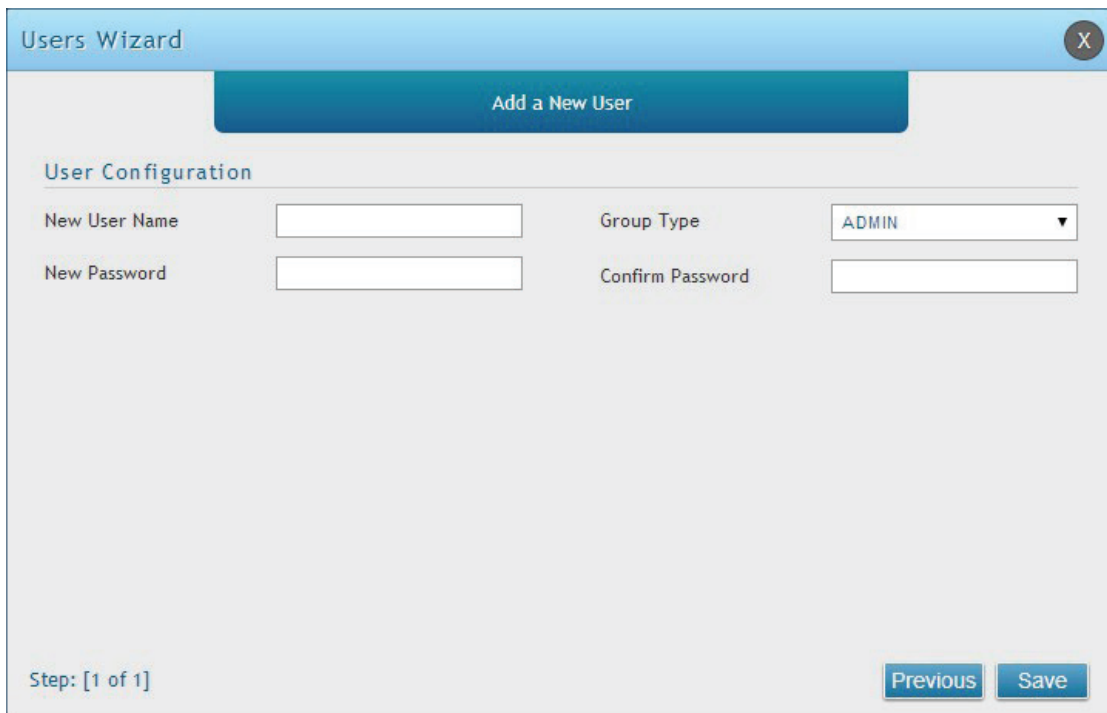

The Users Wizard allows you to create user account that you can assign to groups. Refer to "Users" on page 131 for more information. You may want to create Groups before users so you may assign them to groups as you create them. To create groups, refer to "Groups" on page 127.

To create new users, follow the steps below:

1. Log in to the router.
2. Click **Wizard** in the upper-right side of the page.
3. Click **Run** in the *Users Wizard* box.
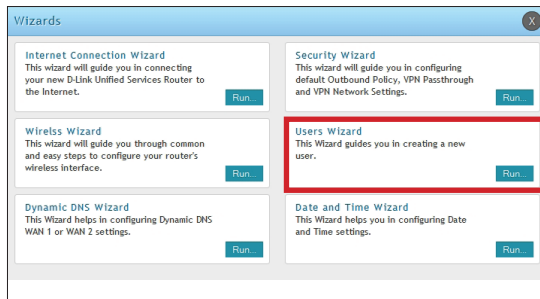

4. The wizard screen will appear.

5. Enter a unique user name.
6. Select the group type from the drop-down menu. For more information on groups, refer to "Groups" on page 127.
7. Enter a password for the user.
8. Enter the password again for confirmation.
9. Click **Save**.

#8 Security/VPN Wizard

The Security Wizard allows you to enable VPN passthrough and create a VPN.

Follow the steps below:

1. Log in to the router.
2. Click **Wizard** in the upper-right side of the page.
3. Click **Run** in the *Security Wizard* box.
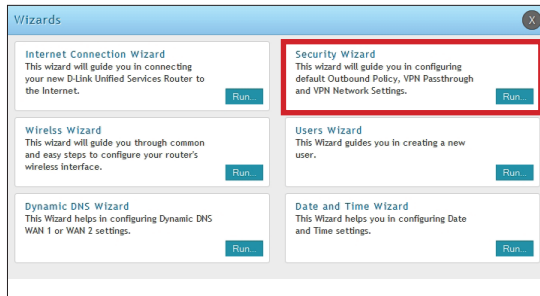

4. The wizard screen will appear.
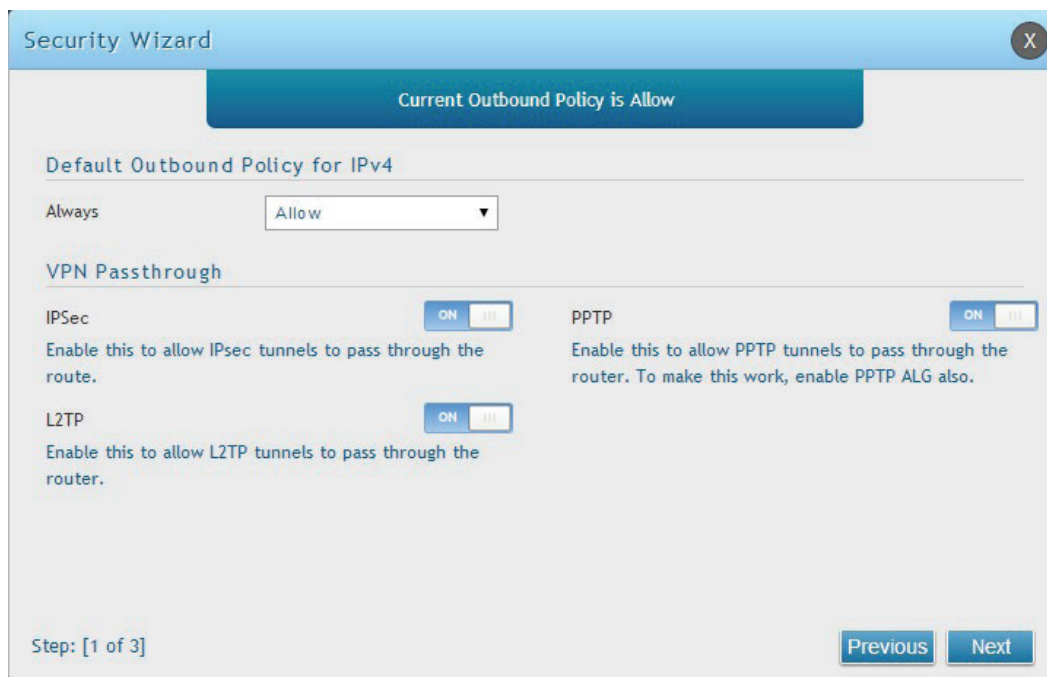

5. Select the default outbound policy from the drop-down menu.
6. Toggle which type(s) of VPN you want allowed to pass through the router to **ON** and click **Next**.

7. You can quickly create both IKE and VPN policies. Once the IKE or VPN policy is created, you can modify it as required.

8. From the *Select VPN Type* drop-down menu, select either **Site to Site** or **Remote Access**.
9. Next to *Connection Name*, enter a name for this VPN connection.
10. Next to *IP Protocol Version*, select either **IPv4** or **IPv6**.
11. Next to *IKE Version*, select the version of IKE.
12. Next to *Pre-Shared Key*, enter the pre-shared key used.
13. Next to *Local Gateway*, select which WAN port used for the local gateway.
14. Next to *Remote Gateway Type* and *Local Gateway Type*, select either **IP Address** or **FQDN**.
15. Enter the Remote and Local WAN IP Address or FQDN and click **Next**.

16. Enter the remote network IP address and subnet mask.
17. Enter the local network IP address and subnet mask.
18. Click **Save**.

Note: *The IP address range used on the remote LAN must be different from the IP address range used on the local LAN.*

#9 Dynamic DNS Wizard

Dynamic DNS (DDNS) is an Internet service that allows routers with varying public IP addresses to be located using Internet domain names. To use DDNS, you must setup an account with a DDNS provider such as DynDNS. org, D-Link DDNS, or Oray.net. Refer to "Dynamic DNS Settings" on page 53 for more information.

Follow the steps below:

1. Log in to the router.
2. Click **Wizard** in the upper-right side of the page.
3. Click **Run** in the *Dynamic DNS Wizard* box.
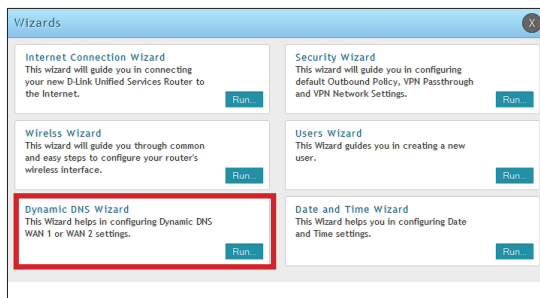

4. The wizard screen will appear.

5. Next to *Dynamic DNS,* select **WAN1** or **WAN2**.
6. Select the *DNS Server Type* from the drop-down menu.
7. Depending on your service, enter your DDNS user name, password, and domain name.
8. Toggle *Allow Wildcards* to **ON** if required by your DDNS service.
9. Toggle *Update Periodically* to **ON** to auto update every 30 days.
10. Click **Save**.

LAN Configuration

By default, the router functions as a Dynamic Host Configuration Protocol (DHCP) server to the hosts on the LAN and WLAN network. With DHCP, PCs and other LAN devices can be assigned IP addresses as well as addresses for DNS servers, Windows Internet Name Service (WINS) servers, and the default gateway. With DHCP server enabled the router's IP address serves as the gateway address for LAN and WLAN clients. The PCs in the LAN are assigned IP addresses from a pool of addresses specified in this procedure. Each pool address is tested before it is assigned to avoid duplicate addresses on the LAN.

For most applications, the default DHCP and TCP/IP settings are satisfactory. If you want another PC on your network to be the DHCP server or if you are manually configuring the network settings of all of your PCs, set the DHCP mode to 'none'. DHCP relay can be used to forward DHCP lease information from another DHCP server on the network. This is particularly useful for wireless clients.

Instead of using a DNS server, you can use a Windows Internet Naming Service (WINS) server. A WINS server is the equivalent of a DNS server but uses the NetBIOS protocol to resolve host names. The router includes the WINS server IP address in the DHCP configuration when acknowledging a DHCP request from a DHCP client.

You can also enable DNS proxy for the LAN. When this is enabled the router then as a proxy for all DNS requests and communicates with the ISP's DNS servers. When disabled all DHCP clients receive the DNS IP addresses of the ISP.

LAN Settings

Path: Network > LAN > LAN Settings

To configure the LAN settings on the router:

    1. Click **Network** > **LAN** > **LAN Settings**.

    2. Complete the fields in the table below and click **Save**.

Field	Description
IP Address	Enter an new IP address for the router. Default is 192.168.10.1.
Subnet Mask	Enter the subnet mask for your network. Default is 255.255.255.0.

DHCP Mode	Select one of the following modes:
	  • **None** - Turns off DHCP.
	  • **DHCP Server** (default) - The router will act as the DHCP server on your network.
	  • **DHCP Relay** - DHCP clients on your network will receive IP address leases from a DHCP server on a different subnet.

DHCP Server

1. Select **DHCP Server** from the drop-down menu.

2. Complete the fields in the table below and click **Save**.

Field	Description
DHCP Mode	Select **DHCP Server** from the drop-down menu.
Starting IP Address	Enter the starting IP address in the DHCP address pool. Any new DHCP client joining the LAN is assigned an IP address within the starting and ending IP address range. Starting and ending IP addresses must be in the same IP address subnet as the router's LAN IP address.
Ending IP Address	Enter the ending IP address in the DHCP address pool.
Default Gateway	Enter the default gateway IP address you want to assign to your DHCP clients. This IP is usually the router's LAN IP address (default is 192.168.10.1).
Domain Name	Enter a domain name.
Lease Time	Enter the time, in hours, for which IP addresses are leased to clients.
Configure DNS/WINS	Toggle to **On** to manually enter DNS and/or WINS server IP address(es). If set to **Off**, your router's LAN IP address will be assigned the DNS server to your clients and the router will get the DNS information from your ISP.
Save	Click **Save** at the bottom to save and activate your settings.

DHCP Relay

1. Select **DHCP Relay** from the drop-down menu.

DHCP Setup	
DHCP Mode	DHCP Relay
Domain Name	DLink
Gateway	

2. Complete the fields in the table below and click **Save**.

Field	Description
DHCP Mode	Select **DHCP Relay** from the drop-down menu.
Domain Name	Enter the domain name of your network.
Gateway	Enter the relay gateway IP address.
Save	Click **Save** at the bottom to save and activate your settings.

DHCP Reserved IPs

Path: Network > LAN > LAN DHCP Reserved IPs

The router's DHCP server can assign IP settings to your clients on your network by adding a client's MAC address and the IP address to be assigned. Whenever the router receives a request from a client, the MAC address of that client is compared with the MAC address list present in the database. If an IP address is already assigned to that computer or device in the database, the customized IP address is configured otherwise an IP address is assigned to the client automatically from the DHCP pool.

To create DHCP reservations:

1. Click **Network** > **LAN** > **LAN DHCP Reserved IPs**.
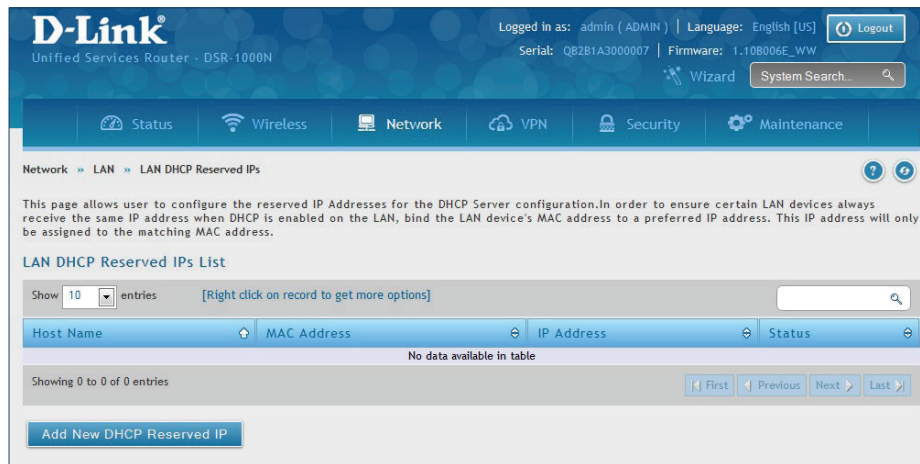

2. Click **Add New DHCP Reserved IP**.
3. Enter the following information and click **Save**.

Field	Description
Host Name	Enter a host name for this device. Do not use spaces.
IP Address	Enter the IP address you want to assign to this device. Note that this IP address must be in the same range as the starting/ending IP address under DHCP Settings.
MAC Address	Enter the MAC address of this device (xx:xx:xx:xx:xx:xx format). This is not case-sensitive.
Associate with IP/MAC Binding	Toggle **ON** to associate this device's information with IP/MAC binding.
Save	Click **Save** to save and activate your settings.

IGMP Setup

Path: Network > LAN > IGMP Setup

IGMP snooping (IGMP Proxy) allows the router to 'listen' in on IGMP network traffic through the router. This then allows the router to filter multicast traffic and direct it only to hosts that need this stream. This is helpful when there is a lot of multicast traffic on the network where all LAN hosts do not need to receive this multicast traffic.

To enable IGMP Proxy:
1. Click **Network** > **LAN** > **IGMP Setup**.
2. Toggle *IGMP Proxy* to **On**.
3. Click **Save**.
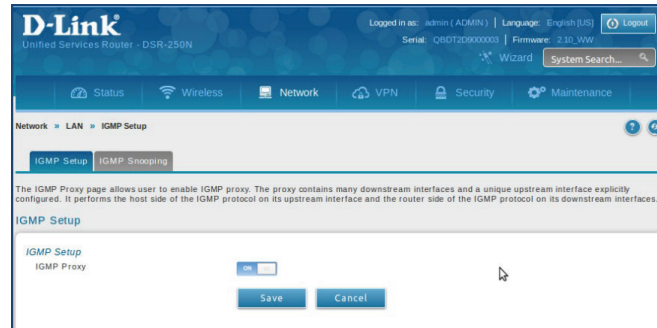

1. the IGMP proxy is switched on
2. Click IGMP Snooping tab
3. Toggle IGMP Snooping to On
4. click **Save**.
5. Right click to Edit any of the VLAN IDs
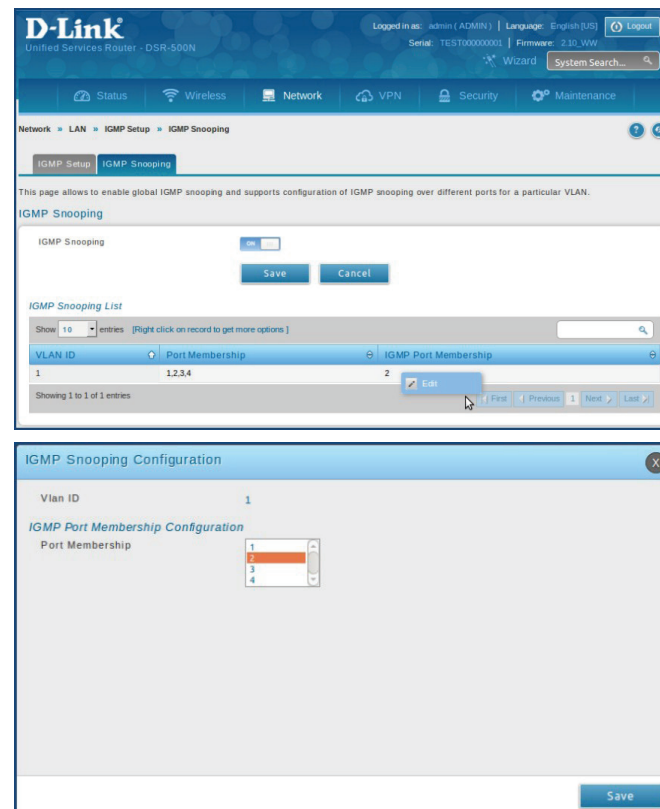

Note: Not support IGMP Snooping on DSR-150/150N

UPnP Setup

Path: Network > LAN > UPnP

Universal Plug and Play (UPnP) is a feature that allows the router to discover devices on the network that can communicate with the router and allow for auto-configuration. If a network device is detected by UPnP, the router can open internal or external ports for the traffic protocol required by that network device. If disabled, the router will not allow for automatic device configuration and you may have to manually open/forward ports to allow applications to work.

To configure the UPnP settings:

1. Click **Network** > **LAN** > **UPnP**.

2. Toggle *Activate UPnP* to **On**.

3. Select a VLAN from the *LAN Segment* drop-down menu.

4. Enter a value for *Advertisement Period*. This is the frequency that the router broadcasts UPnP information over the network. A large value will minimize network traffic but cause delays in identifying new UPnP devices to the network.

5. Enter a value for *Advertisement Time to Live*. This is the number of steps a packet is allowed to propagate before being discarded. Small values will limit the UPnP broadcast range. A default of 4 is typical for networks with a few number of switches.

6. Click **Save**.

7. Your entry will be displayed in the UPnP Port Map List. To edit or delete, right-click an entry and select the action from the menu. Repeat steps 2-6 to add multiple entries.

Jumbo Frames

Path: Network > LAN > Jumbo Frames

Jumbo frames are Ethernet frames with more than 1500 bytes of payload. When this option is enabled, the LAN devices can exchange information at Jumbo frames rate.

To enable jumbo frames:
1. Click **Network** > **LAN** > **Jumbo Frames**.
2. Toggle *Activate Jumbo Frames* to **On**.
3. Click **Save**.
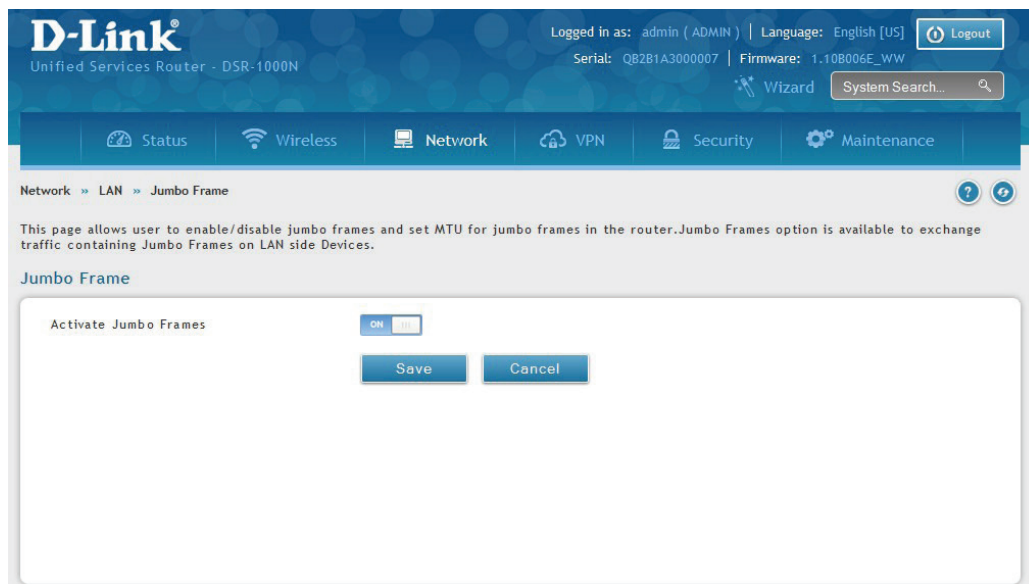

VLAN

The router supports virtual network isolation on the LAN with the use of VLANs. LAN devices can be configured to communicate in a sub network defined by VLAN identifiers. LAN ports can be assigned unique VLAN IDs so that traffic to and from that physical port can be isolated from the general LAN.

VLAN filtering is particularly useful to limit broadcast packets of a device in a large network VLAN support is enabled by default in the router. In the VLAN Configuration page, enable VLAN support on the router and then proceed to the next section to define the virtual network.

VLAN Settings

Path: Network > VLAN > VLAN Settings

The VLAN List page displays a list of configured VLANs by name and VLAN ID. A VLAN membership can be created by clicking the **Add New VLAN** button below the list.

A VLAN membership entry consists of a VLAN identifier and the numerical VLAN ID which is assigned to the VLAN membership. The VLAN ID value can be any number from 2 to 4091. VLAN ID 1 is reserved for the default VLAN, which is used for untagged frames received on the interface.

To create a new VLAN:
1. Click **Network** > **LAN** > **VLAN Settings**.
2. Click **Add New VLAN** at the bottom.
3. Enter the following required information from the table on the next page.

Field	Description
VLAN ID	Enter a number between 2 and 4053.
Name	Enter a name for your VLAN.
Captive Portal	Toggle **ON** to enable Captive Portal (refer to the next page for more information).
Activate InterVLAN Routing	Toggle **ON** to allow routing between multiple VLANs or **OFF** to deny communication between VLANs.
IP Address	Enter the IP address for the VLAN.
Subnet Mask	Enter the subnet mask for the VLAN.
DHCP Mode	Select one of the following modes: • **None** - Turns off DHCP for your VLAN. • **DHCP Server** (default) - The router will act as the DHCP server for your VLAN. • **DHCP Relay** - DHCP clients on your VLAN will receive IP address leases from a DHCP server on a different subnet.
Enable DNS Proxy	Toggle **ON** to enable the router to act as a proxy for all DNS requests and communicate with the ISP's DNS servers.
Save	Click **Save** to save and activate your settings.

Captive Portal

Note: *The DSR-150/150N/250/250N routers do not have support for the Captive Portal feature. Captive Portal is available for LAN users only and not for DMZ hosts.*

Captive Portals can be enabled on a per-VLAN basis. Hosts of a particular VLAN can be directed to authenticate via the Captive Portal, which may be a customized portal with unique instructions and branding as compared to another VLAN. The most critical aspect of this configuration page is choosing the authentication server. All users (VLAN hosts) that want to gain internet access via the selected Captive Portal will be authenticated through the selected server.

To enable Creative Portal to a specific VLAN:

1. Click **Network** > **LAN** > **VLAN Settings**.
2. Click **Add New VLAN** at the bottom or right-click an existing VLAN and select **Edit**.
3. Toggle *Captive Portal* to **ON**.
4. Next to *Authentication Server*, select an authentication server from the drop-down menu.
5. Next to *Login Profile Name*, select a profile from the drop-down or click **Create a Profile** to create a new one.
6. Select either **HTTP** or **HTTPS** for the redirect type.
7. If you want users to enter a CAPTCHA challenge at login, toggle to **ON**.
8. If you would like communication between VLANs, toggle *Activate InterVLAN Routing* to **ON**.
9. Make any other changes/selections and click **Save**.

Port/Wireless VLAN

Path: Network > VLAN Settings > Port VLAN

In order to tag all traffic through a specific LAN port with a VLAN ID, you can associate a VLAN to a physical port and wireless segment.

VLAN membership properties for the LAN and wireless LAN are listed on this page. The VLAN Port table displays the port identifier, the mode setting for that port and VLAN membership information. The configuration page is accessed by selecting one of the four physical ports or a configured access point and clicking **Edit**.

To edit, right-click on the port and select **Edit**. The edit page offers the following configuration options:
- Mode: The mode of this VLAN can be General, Access (default), or Trunk. Refer to the next page for more information on the different modes.

- Select PVID for the port when General mode is selected.

- Configured VLAN memberships will be displayed on the VLAN Membership Configuration for the port. By selecting one more VLAN membership options for a General or Trunk port, traffic can be routed between the selected VLAN membership IDs.

In **Access** mode the port is a member of a single VLAN (and only one). All data going into and out of the port is untagged. Traffic through a port in access mode looks like any other Ethernet frame.
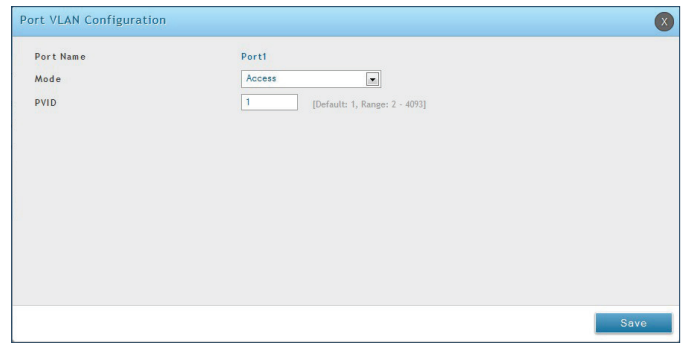

In **General** mode the port is a member of a user selectable set of VLANs. The port sends and receives data that is tagged or untagged with a VLAN ID. If the data into the port is untagged, it is assigned the defined PVID.
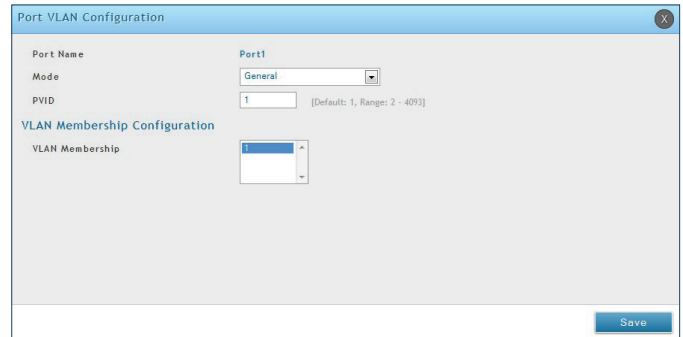

For example, if Port 3 is a General port with PVID 3, then the untagged data into Port 3 will be assigned PVID 3. All tagged data sent out of the port with the same PVID will be untagged. This is mode is typically used with IP Phones that have dual Ethernet ports. Data coming from phone to the switch port on the router will be tagged. Data passing through the phone from a connected device will be untagged.

Note: *The DSR-150/150N do not support General mode due to hardware limitations.*

In **Trunk** mode the port is a member of a user selectable set of VLANs. All data going into and out of the port is tagged. Untagged coming into the port is not forwarded, except for the default VLAN with PVID=1, which is untagged. Trunk ports multiplex traffic for multiple VLANs over the same physical link.
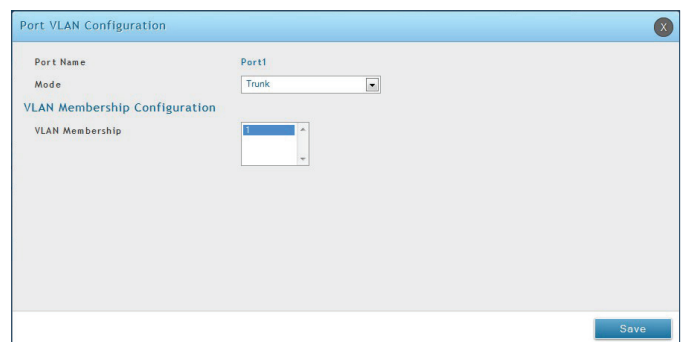

Connect to the Internet

This router has two WAN ports that can be used to establish a connection to the internet. It is assumed that you have arranged for internet service with your Internet Service Provider (ISP). Please contact your ISP or network administrator for the configuration information that will be required to setup the router.

Dynamic IP

Path: Network > Internet > WAN1 Settings

Select **Dynamic IP** (DHCP) to obtain IP address information automatically from your Internet Service Provider.

Field	Description
Host Name	Enter a host name if required by your ISP.
DNS Server Source	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
MAC Address Source	Select **Use Default MAC** to use the MAC address from the WAN1 port to associate with your modem/ISP, **Clone your PC's MAC** to use the MAC address of the computer you are currently using to associate with your modem/ISP, or **Use this MAC** to manually enter a MAC address.
MAC Address	If you selected Use this MAC, enter the MAC address you want to associate with your ISP.
MTU Size	Select to use the default MTU value (1500) or select **Custom** to enter your own value.
Custom MTU	Enter a MTU value to optimize performance with your ISP.
Port Speed	Select a value from the drop-down menu. The default value is **Auto-Sense**.
Save	Click **Save** to save and activate your settings.

Static IP

Path: Network > Internet > WAN1 Settings

Select **Static IP** to manually enter the Internet settings supplied by your Internet Service Provider.

Field	Description
IP Address	Enter the IP address supplied by your ISP.
IP Subnet Mask	Enter the subnet mask supplied by your ISP.
Gateway IP Address	Enter the gateway IP address supplied by your ISP.
DNS Server Source	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
MAC Address Source	Select **Use Default MAC** to use the MAC address from the WAN1 port to associate with your modem/ISP, **Clone your PC's MAC** to use the MAC address of the computer you are currently using to associate with your modem/ISP, or **Use this MAC** to manually enter a MAC address.
MAC Address	If you selected *Use this MAC*, enter the MAC address you want to associate with your ISP.
MTU Size	Select to use the default MTU value (1500) or select **Custom** to enter your own value.
Custom MTU	Enter a MTU value to optimize performance with your ISP.
Port Speed	Select a value from the drop-down menu. The default value is **Auto-Sense**.
Save	Click **Save** to save and activate your settings.

PPPoE

Path: Network > Internet > WAN1 Settings

Select **PPPoE** to enter the PPPoE Internet settings supplied by your Internet Service Provider.

Field	Description
Address Mode	Select **Dynamic IP** or **Static IP** (IP settings supplied by your ISP).
User Name	Enter your PPPoE user name.
Password	Enter your PPPoE password.
Service	Enter if your ISP requires it.
Authentication Type	Select the authentication type from the drop-down menu.
Reconnect Mode	Some ISPs may require you to pay for usage time. Select **On Demand** if this is the case. This will have the router connect to the Internet only when you initiate an Internet connection. Select **Always On** to have the router stay connected to the Internet.
IP Address	If you selected Static IP, enter the IP address supplied by your ISP.
IP Subnet Mask	If you selected Static IP, enter the subnet mask supplied by your ISP.
Gateway IP Address	If you selected Static IP, enter the gateway IP address supplied by your ISP.
DNS Server Source	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
MAC Address Source	Select **Use Default MAC** to use the MAC address from the WAN1 port to associate with your modem/ISP, **Clone your PC's MAC** to use the MAC address of the computer you are currently using to associate with your modem/ISP, or **Use this MAC** to manually enter a MAC address.
MAC Address	If you selected Use this MAC, enter the MAC address you want to associate with your ISP.
MTU Size	Select to use the default MTU value (1500) or select **Custom** to enter your own value.
Custom MTU	Enter a MTU value to optimize performance with your ISP.
Port Speed	Select a value from the drop-down menu. The default value is **Auto-Sense**.
Save	Click **Save** to save and activate your settings.

PPTP

Path: Network > Internet > WAN1 Settings

Select **PPTP** to enter the PPTP Internet settings supplied by your Internet Service Provider.

Field	Description
Address Mode	Select **Dynamic IP** or **Static IP** (IP settings supplied by your ISP).
Server Address	Enter your PPTP server address.
User Name	Enter your PPTP user name.
Password	Enter your PPTP password.
MPPE Encryption	Toggle to **ON** and select the level of MPPE encryption.
Split Tunnel	Toggle to **ON** to use split tunnelling. This will allow you to connect to a VPN and Internet using the same physical connection.
Reconnect Mode	Some ISPs may require you to pay for usage time. Select **On Demand** if this is the case. This will have the router connect to the Internet only when you initiate an Internet connection. Select **Always On** to have the router stay connected to the Internet.
IP Address	If you selected Static IP, enter the IP address supplied by your ISP.
IP Subnet Mask	If you selected Static IP, enter the subnet mask supplied by your ISP.
Gateway IP Address	If you selected Static IP, enter the gateway IP address supplied by your ISP.
DNS Server Source	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
MAC Address Source	Select **Use Default MAC** to use the MAC address from the WAN1 port to associate with your modem/ISP, **Clone your PC's MAC** to use the MAC address of the computer you are currently using to associate with your modem/ISP, or **Use this MAC** to manually enter a MAC address.
MAC Address	If you selected Use this MAC, enter the MAC address you want to associate with your ISP.
MTU Size	Select to use the default MTU value (1500) or select **Custom** to enter your own value.
Custom MTU	Enter a MTU value to optimize performance with your ISP.
Port Speed	Select a value from the drop-down menu. The default value is **Auto-Sense**.
Save	Click **Save** to save and activate your settings.

L2TP

Path: Network > Internet > WAN1 Settings

Select **L2TP** to enter the L2TP Internet settings supplied by your Internet Service Provider.

Field	Description
Address Mode	Select **Dynamic IP** or **Static IP** (IP settings supplied by your ISP).
Server Address	Enter your PPTP server address.
User Name	Enter your PPTP user name.
Password	Enter your PPTP password.
Secret	Enter a shared secret if required.
Split Tunnel	Toggle to **ON** to use split tunnelling. This will allow you to connect to a VPN and Internet using the same physical connection.
Reconnect Mode	Some ISPs may require you to pay for usage time. Select **On Demand** if this is the case. This will have the router connect to the Internet only when you initiate an Internet connection. Select **Always On** to have the router stay connected to the Internet.
IP Address	If you selected Static IP, enter the IP address supplied by your ISP.
IP Subnet Mask	If you selected Static IP, enter the subnet mask supplied by your ISP.
Gateway IP Address	If you selected Static IP, enter the gateway IP address supplied by your ISP.
DNS Server Source	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
MAC Address Source	Select **Use Default MAC** to use the MAC address from the WAN1 port to associate with your modem/ISP, **Clone your PC's MAC** to use the MAC address of the computer you are currently using to associate with your modem/ISP, or **Use this MAC** to manually enter a MAC address.
MAC Address	If you selected Use this MAC, enter the MAC address you want to associate with your ISP.
MTU Size	Select to use the default MTU value (1500) or select **Custom** to enter your own value.
Custom MTU	Enter a MTU value to optimize performance with your ISP.
Port Speed	Select a value from the drop-down menu. The default value is **Auto-Sense**.
Save	Click **Save** to save and activate your settings.

Japanese PPPoE

Path: Network > Internet > WAN1 Settings

Select **Japanese PPPoE** to enter the PPPoE Internet settings supplied by your Internet Service Provider.

Field	Description
Address Mode	Select **Dynamic IP** or **Static IP** (IP settings supplied by your ISP).
User Name	Enter your PPPoE user name.
Password	Enter your PPPoE password.
Service	Enter if your ISP requires it.
Authentication Type	Select the authentication type from the drop-down menu.
Reconnect Mode	Some ISPs may require you to pay for usage time. Select **On Demand** if this is the case. This will have the router connect to the Internet only when you initiate an Internet connection. Select **Always On** to have the router stay connected to the Internet.
IP Address	If you selected Static IP, enter the IP address supplied by your ISP.
IP Subnet Mask	If you selected Static IP, enter the subnet mask supplied by your ISP.
Gateway IP Address	If you selected Static IP, enter the gateway IP address supplied by your ISP.
Primary PPPoE DNS Servers	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
Secondary PPPoE Profile	You may create a secondary PPPoE profile.
MAC Address Source	Select **Use Default MAC** to use the MAC address from the WAN1 port to associate with your modem/ISP, **Clone your PC's MAC** to use the MAC address of the computer you are currently using to associate with your modem/ISP, or **Use this MAC** to manually enter a MAC address.
MAC Address	If you selected Use this MAC, enter the MAC address you want to associate with your ISP.
Port Speed	Select a value from the drop-down menu. The default value is **Auto-Sense**.
Save	Click **Save** to save and activate your settings.

Russian PPPoE

Path: Network > Internet > WAN1 Settings

Select **Russian PPPoE** to enter the PPPoE Internet settings supplied by your Internet Service Provider.

Field	Description
Address Mode	Select **Dynamic IP** or **Static IP** (IP settings supplied by your ISP).
User Name	Enter your PPPoE user name.
Password	Enter your PPPoE password.
Service	Enter if your ISP requires it.
Authentication Type	Select the authentication type from the drop-down menu.
Reconnect Mode	Some ISPs may require you to pay for usage time. Select **On Demand** if this is the case. This will have the router connect to the Internet only when you initiate an Internet connection. Select **Always On** to have the router stay connected to the Internet.
IP Address	If you selected Static IP, enter the IP address supplied by your ISP.
IP Subnet Mask	If you selected Static IP, enter the subnet mask supplied by your ISP.
Gateway IP Address	If you selected Static IP, enter the gateway IP address supplied by your ISP.
DNS Server Source	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
MAC Address Source	Select **Use Default MAC** to use the MAC address from the WAN1 port to associate with your modem/ISP, **Clone your PC's MAC** to use the MAC address of the computer you are currently using to associate with your modem/ISP, or **Use this MAC** to manually enter a MAC address.
MAC Address	If you selected Use this MAC, enter the MAC address you want to associate with your ISP.
WAN2 Physical Setting	Select **Dynamic IP** or **Static IP** (IP settings supplied by your ISP). If you select Static IP, enter the IP settings supplied by your ISP.
WAN2 Physical DNS	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Port Speed	Select a value from the drop-down menu. The default value is **Auto-Sense**.
Save	Click **Save** to save and activate your settings.

Russian PPTP

Path: Network > Internet > WAN1 Settings

Select **Russian PPTP** to enter the PPTP Internet settings supplied by your Internet Service Provider.

Field	Description
Address Mode	Select **Dynamic IP** or **Static IP** (IP settings supplied by your ISP).
Server Address	Enter your PPTP server address.
User Name	Enter your PPTP user name.
Password	Enter your PPTP password.
MPPE Encryption	Toggle to **ON** and select the level of MPPE encryption.
Split Tunnel	Toggle to **ON** to use split tunnelling. This will allow you to connect to a VPN and Internet using the same physical connection.
Reconnect Mode	Some ISPs may require you to pay for usage time. Select **On Demand** if this is the case. This will have the router connect to the Internet only when you initiate an Internet connection. Select **Always On** to have the router stay connected to the Internet.
IP Address	If you selected Static IP, enter the IP address supplied by your ISP.
IP Subnet Mask	If you selected Static IP, enter the subnet mask supplied by your ISP.
Gateway IP Address	If you selected Static IP, enter the gateway IP address supplied by your ISP.
DNS Server Source	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
MAC Address Source	Select **Use Default MAC** to use the MAC address from the WAN1 port to associate with your modem/ISP, **Clone your PC's MAC** to use the MAC address of the computer you are currently using to associate with your modem/ISP, or **Use this MAC** to manually enter a MAC address.
MAC Address	If you selected Use this MAC, enter the MAC address you want to associate with your ISP.
MTU Size	Select to use the default MTU value (1500) or select **Custom** to enter your own value.
Custom MTU	Enter a MTU value to optimize performance with your ISP.
Port Speed	Select a value from the drop-down menu. The default value is **Auto-Sense**.
Save	Click **Save** to save and activate your settings.

Russian L2TP

Path: Network > Internet > WAN1 Settings

Select **Russian L2TP** to enter the L2TP Internet settings supplied by your Internet Service Provider.

Field	Description
Address Mode	Select **Dynamic IP** or **Static IP** (IP settings supplied by your ISP).
Server Address	Enter your PPTP server address.
User Name	Enter your PPTP user name.
Password	Enter your PPTP password.
Secret	Enter a shared secret if required.
Split Tunnel	Toggle to **ON** to use split tunnelling. This will allow you to connect to a VPN and Internet using the same physical connection.
Reconnect Mode	Some ISPs may require you to pay for usage time. Select **On Demand** if this is the case. This will have the router connect to the Internet only when you initiate an Internet connection. Select **Always On** to have the router stay connected to the Internet.
IP Address	If you selected Static IP, enter the IP address supplied by your ISP.
IP Subnet Mask	If you selected Static IP, enter the subnet mask supplied by your ISP.
Gateway IP Address	If you selected Static IP, enter the gateway IP address supplied by your ISP.
DNS Server Source	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
MAC Address Source	Select **Use Default MAC** to use the MAC address from the WAN1 port to associate with your modem/ISP, **Clone your PC's MAC** to use the MAC address of the computer you are currently using to associate with your modem/ISP, or **Use this MAC** to manually enter a MAC address.
MAC Address	If you selected Use this MAC, enter the MAC address you want to associate with your ISP.
MTU Size	Select to use the default MTU value (1500) or select **Custom** to enter your own value.
Custom MTU	Enter a MTU value to optimize performance with your ISP.
Port Speed	Select a value from the drop-down menu. The default value is **Auto-Sense**.
Save	Click **Save** to save and activate your settings.

WAN2 Settings

Path: Network > Internet > WAN2 Settings

Select **WAN** and select the Internet connection type. Please refer to the previous pages (41-49) for more information. If you want to set WAN2 port to **DMZ**, skip to the next page.

WAN

DMZ

This router supports one of the physical ports to be configured as a secondary WAN Ethernet port or a dedicated DMZ port. A DMZ is a sub network that is open to the public but behind the firewall. The DMZ adds an additional layer of security to the LAN, as specific services/ports that are exposed to the internet on the DMZ do not have to be exposed on the LAN. It is recommended that hosts that must be exposed to the internet (such as web or email servers) be placed in the DMZ network.

Firewall rules can be allowed to permit access specific services/ports to the DMZ from both the LAN or WAN. In the event of an attack to any of the DMZ nodes, the LAN is not necessarily vulnerable as well.

DMZ configuration is identical to the LAN configuration. There are no restrictions on the IP address or subnet assigned to the DMZ port, other than the fact that it cannot be identical to the IP address given to the LAN interface of this gateway.

Note: *DSR-500/1000/500N/1000N/500AC/1000AC, in order to configure a DMZ port, the router's configurable port must be set to DMZ in the* **Network** *>* **Internet** *>* **DMZ Settings** *page.*

Note: *For DSR-150N and DSR-250N, enabling DMZ will result in port 8 of the LAN switch being used for a dedicated DMZ port. The other 7 LAN ports remain unchanged.*

1. Click **Network** > **Internet** > **WAN2 / DMZ Settings**.
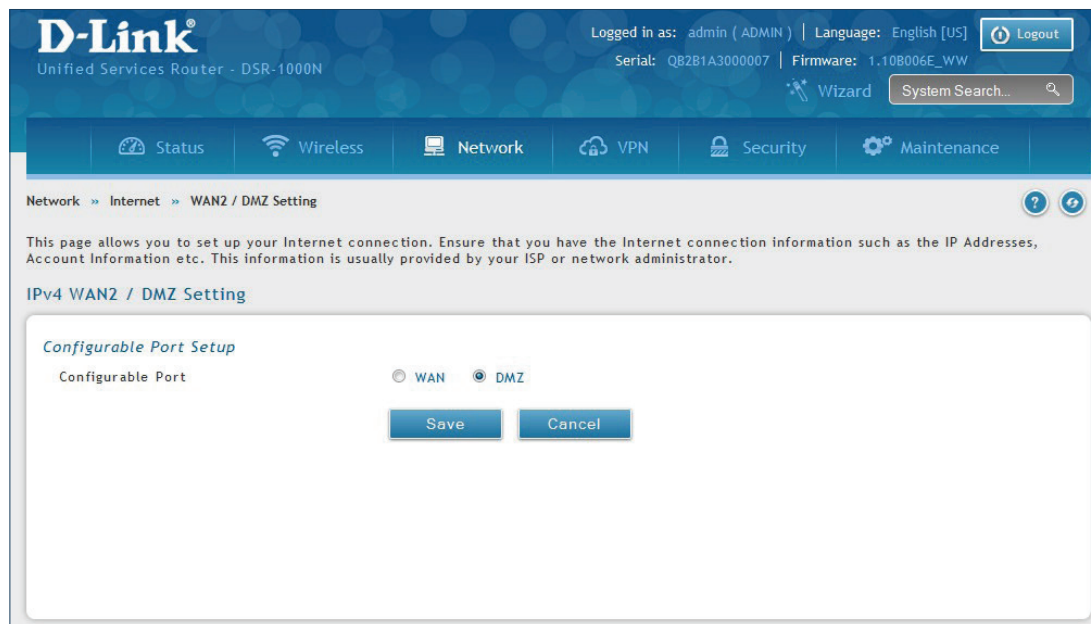

2. Select **DMZ** and click **Save**.

WAN3 (3G Internet)

Path: Network > Internet > WAN3 Settings

This router supports the use of 3G Internet access. Cellular 3G internet access is available on WAN3 via a 3G USB modem for DSR series. The cellular ISP that provides the 3G data plan will provide the authentication requirements to establish a connection. The dial Number and APN are specific to the cellular carriers. Once the connection type settings are configured and saved, navigate to the WAN status page (Setup > Internet Settings > WAN3 Status) and Enable the WAN3 link to establish the 3G connection.

Field	Description
Reconnect Mode	Some ISPs may require you to pay for usage time. Select **On Demand** if this is the case. This will have the router connect to the Internet only when you initiate an Internet connection. Select **Always On** to have the router stay connected to the Internet.
Maximum Idle Time	Enter the idle time in minutes before the router disconnects from the Internet (On Demand only).
User Name	Enter your 3G account user name.
Password	Enter your 3G account password.
Dial-in Number	Enter the phone number to access your Internet.
Authentication Protocol	Select one of following protocols from the drop-down menu: None, PAP or CHAP.
APN Required	Toggle to ON if your ISP requires APN to connect.
APN	Enter the APN (Access Point Name) provided by the ISP.
DNS Server Source	Select either **Get Dynamically from ISP** or **Use These DNS Servers** to manually enter DNS servers.
Primary DNS Server	If you selected "Use These DNS Servers", enter the primary DNS server IP address.
Secondary DNS Server	If you selected "Use These DNS Servers", enter the secondary DNS server IP address.
MTU Size	Select to use the default MTU value (1500) or select **Custom** to enter your own value.
Custom MTU	Enter a MTU value to optimize performance with your ISP.

WAN Mode

Path: Network > Internet > WAN Mode

This router supports multiple WAN links. This allows you to take advantage of failover and load balancing features to ensure certain internet dependent services are prioritized in the event of unstable WAN connectivity on one of the ports.

To use Auto Failover or Load Balancing, WAN link failure detection must be configured. This involves accessing DNS servers on the internet or ping to an internet address (user defined). If required, you can configure the number of retry attempts when the link seems to be disconnected or the threshold of failures that determines if a WAN port is down.

Single WAN Port

If you do not want to use Auto Failover or Load Balancing, select **Single WAN Port** from the *WAN Mode* drop-down menu and select the WAN port you want to set. Click **Save**.
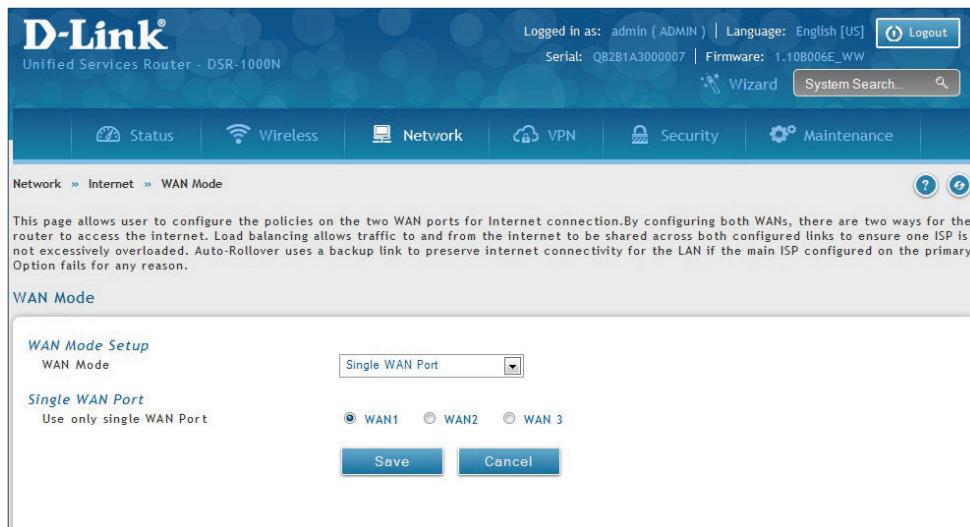

Auto-Rollover using WAN IP

In this mode one of your WAN ports is assigned as the primary internet link for all internet traffic and the secondary WAN port is used for redundancy in case the primary link goes down for any reason. Both WAN ports (primary and secondary) must be configured to connect to the respective ISP's before enabling this feature. The secondary WAN port will remain unconnected until a failure is detected on the primary link (either port can be assigned as the primary). In the event of a failure on the primary port, all internet traffic will be rolled over to the backup port. When configured in Auto-Failover mode, the link status of the primary WAN port is checked at regular intervals as defined by the failure detection settings.

1. Click **Network** > **Internet** > **WAN Mode**.

2. Complete the fields from the table below and click **Save**.

Field	Description
WAN Mode	Select **Auto-Rollover Using WAN IP** from the drop-down menu.
Use Primary WAN Port	Select which WAN port is the primary.
Use Secondary WAN Port	Select which port to use if the primary port fails.
WAN Health Check	• DNS lookup using WAN DNS Servers: DNS Lookup of the DNS Servers of the primary link is used to detect primary WAN connectivity. • DNS lookup using DNS Servers: DNS Lookup of the custom DNS Servers can be specified to check the connectivity of the primary link. • Ping these IP addresses: These IP's will be pinged at regular intervals to check the connectivity of the primary link. • Retry Interval is: The number tells the router how often it should run the above configured failure detection method. • Failover after: This sets the number of retries after which failover is initiated.
WAN1/WAN2/WAN3	Enter the DNS server or IP address to ping.
Retry Interval	Enter the time in seconds to initiate the WAN health check. Default is every 30 seconds.
Failover After	Enter the number of failures before the router will enable the failover process.

Note: *The DSR series routers support 3G USB Modem as a failover link when the internet access is lost.*

Load Balancing

Path: Network > Internet > WAN Mode

This feature allows you to use multiple WAN links (and presumably multiple ISP's) simultaneously. After configuring more than one WAN port, the load balancing option is available to carry traffic over more than one link. Protocol bindings are used to segregate and assign services over one WAN port in order to manage internet flow. The configured failure detection method is used at regular intervals on all configured WAN ports when in Load Balancing mode.

This router currently supports three algorithms for Load Balancing:

Round Robin: This algorithm is particularly useful when the connection speed of one WAN port greatly differs from another. In this case you can define protocol bindings to route low-latency services (such as VOIP) over the higher -speed link and let low-volume background traffic (such as SMTP) go over the lower speed link. Protocol binding is explained in next section.

Spillover: If Spillover method is selected, the primary WAN acts as a dedicated link until a defined bandwidth threshold are reached. After this, the secondary WAN will be used for new connections. Inbound connections on the secondary WAN are permitted with this mode, as the spillover logic governs outbound connections moving from the primary to secondary WAN. You can configure spillover mode by using following options:

- **Load Tolerance:** It is the percentage of bandwidth after which the router switches to secondary WAN.
- **Max Bandwidth:** This sets the maximum bandwidth tolerable by the primary WAN for outbound traffic.

If the link bandwidth of outbound traffic goes above the load tolerance value of max bandwidth, the router will spillover the next connections to secondary WAN.

For example, if the maximum bandwidth of primary WAN is 1Kbps and the load tolerance is set to 70. Now every time a new connection is established the bandwidth increases. After a certain number of connections say bandwidth reached 70% of 1Kbps, the new outbound connections will be spilled over to secondary WAN. The maximum value of load tolerance is 80% and the minimum is 20%.

Note: The DSR-1000 and DSR-500 routers support the traffic load balancing between physical WAN port and a 3G USB Modem.

Load balancing is particularly useful when the connection speed of one WAN port greatly differs from another. In this case you can define protocol bindings to route low-latency services (such as VOIP) over the higher-speed link and let low-volume background traffic (such as SMTP) go over the lower speed link.

Round Robin

1. Click **Network** > **Internet** > **WAN Mode**.

2. Complete the fields from the table below and click **Save**.

Field	Description
WAN Mode	Select **Load Balancing** from the drop-down menu.
Load Balance	Select **Round Robin**.
WAN Health Check	• DNS lookup using WAN DNS Servers: DNS Lookup of the DNS Servers of the primary link is used to detect primary WAN connectivity. • DNS lookup using DNS Servers: DNS Lookup of the custom DNS Servers can be specified to check the connectivity of the primary link. • Ping these IP addresses: These IP's will be pinged at regular intervals to check the connectivity of the primary link. • Retry Interval is: The number tells the router how often it should run the above configured failure detection method. • Failover after: This sets the number of retries after which failover is initiated.
Save	Click to save and activate your settings.

Spillover

1. Click **Network** > **Internet** > **WAN Mode**.

2. Complete the fields from the table below and click **Save**.

Field	Description
WAN Mode	Select **Load Balancing** from the drop-down menu.
Load Balance	Select **Spillover Mode**.
WAN Health Check	• DNS lookup using WAN DNS Servers: DNS Lookup of the DNS Servers of the primary link is used to detect primary WAN connectivity. • DNS lookup using DNS Servers: DNS Lookup of the custom DNS Servers can be specified to check the connectivity of the primary link. • Ping these IP addresses: These IP's will be pinged at regular intervals to check the connectivity of the primary link. • Retry Interval is: The number tells the router how often it should run the above configured failure detection method. • Failover after: This sets the number of retries after which failover is initiated.
Retry Interval is	Enter the time in seconds to initiate the WAN health check. Default is every 30 seconds.
Failover After	Enter the number of failures before the router will enable the failover process.
Load Tolerance	Enter the percentage of bandwidth after which the router switches to the secondary WAN.
Max Bandwidth	This sets the maximum bandwidth tolerable by the primary WAN for outbound traffic.
Save	Click to save and activate your settings.

Routing Mode

Routing between the LAN and WAN will impact the way this router handles traffic that is received on any of its physical interfaces. The routing mode of the gateway is core to the behavior of the traffic flow between the secure LAN and the internet.

NAT or Classical

Path: Network > Internet > Routing Mode

With classical routing, devices on the LAN can be directly accessed from the internet with their public IP addresses (assuming appropriate firewall settings are configured). If your ISP has assigned an IP address for each of the computers/devices that you use, select **Classical**.

NAT is a technique which allows several computers and devices on your local network to share an Internet connection. The computers on the LAN use a "private" IP address range while the WAN port on the router is configured with a single "public" IP address. Along with connection sharing, NAT also hides internal IP addresses from the computers on the Internet. NAT is required if your ISP has assigned only one IP address to you. The computers/devices that connect through the router will need to be assigned IP addresses from a private subnet.

1. Click **Network** > **Internet** > **Routing Mode**.
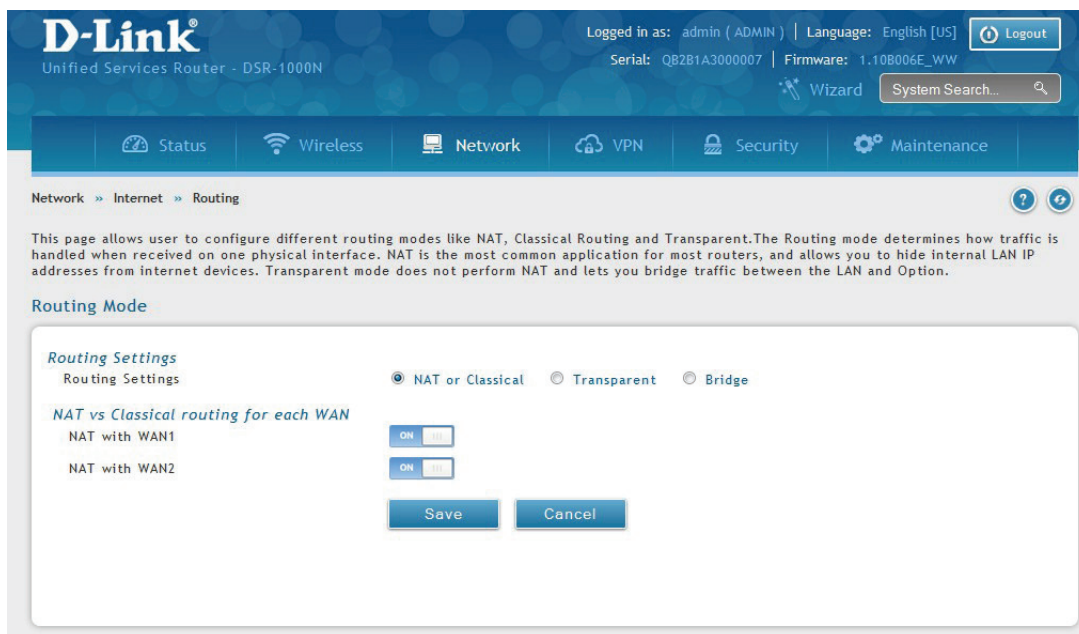

2. Complete the fields from the table below and click **Save**.

Field	Description
Routing Settings	Select **NAT or Classical**.
NAT with WAN1	Toggle to **ON** to use NAT with WAN1 or **OFF** for classical.
NAT with WAN2	Toggle to **ON** to use NAT with WAN2 or **OFF** for classical.
Save	Click to save and activate your settings.

Transparent

When Transparent Routing Mode is enabled, NAT is not performed on traffic between the LAN and WAN interfaces. Broadcast and multicast packets that arrive on the LAN interface are switched to the WAN and vice versa, if they do not get filtered by firewall or VPN policies. To maintain the LAN and WAN in the same broadcast domain select **Transparent** mode, which allows bridging of traffic from LAN to WAN and vice versa, except for router-terminated traffic and other management traffic. All DSR features (such as 3G modem support) are supported in transparent mode assuming the LAN and WAN are configured to be in the same broadcast domain.

Note: NAT routing has a feature called "NAT Hair -pinning" that allows internal network users on the LAN and DMZ to access internal servers (e.g., an internal FTP server) using their externally-known domain name. This is also referred to as "NAT loopback" since LAN generated traffic is redirected through the firewall to reach LAN servers by their external name.

1. Click **Network** > **Internet** > **Routing**.
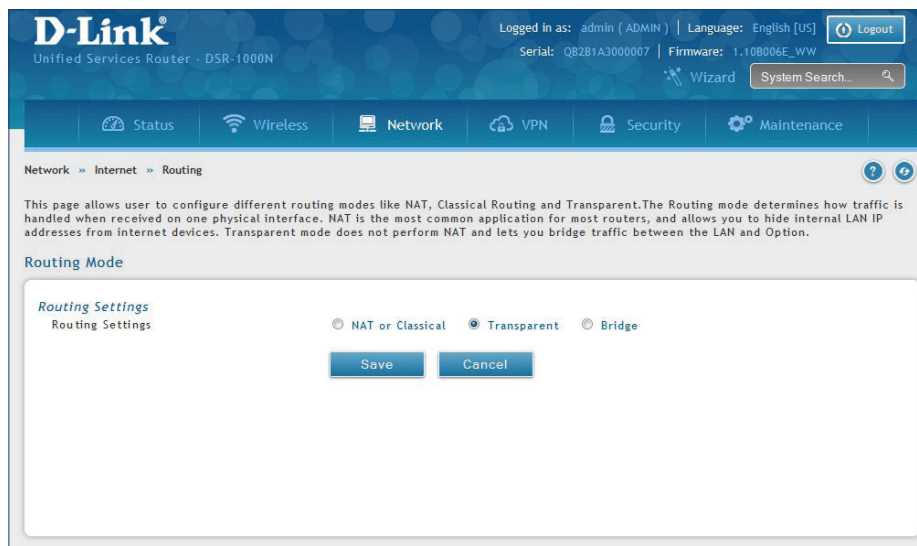

2. Complete the fields from the table below and click **Save**.

Field	Description
Routing Settings	Select **Transparent**.
Save	Click to save and activate your settings.

Bridge

When Bridge Mode routing is enabled, the first physical LAN port and secondary WAN/DMZ (port 2) interfaces are bridged together at Layer 2, creating an aggregate network. The other LAN ports and the primary WAN (WAN1) are not part of this bridge, and the router asks as a NAT device for these other ports. With Bridge mode for the LAN port 1 and WAN2/DMZ interfaces, L2 and L3 broadcast traffic as well as ARP / RARP packets are passed through. When WAN2 receives tagged traffic the tag information will be removed before the packet is forwarded to the LAN port 1 interface.

Note: Bridge mode option is available on DSR-500 / 500N / 500AC 1000 / 1000N / 1000AC routers only.

1. Click **Network** > **Internet** > **Routing**.

2. Complete the fields from the table below and click **Save**.

Field	Description
Routing Settings	Select **Bridge**.
Bridge Interface IP Address	Enter the bridge interface IP address.
DMZ Interface IP Address	Enter the DMZ interface IP address.
Subnet Mask	Enter the subnet mask.
NAT with WAN1	Toggle **ON** to turn NAT on WAN1 or **OFF** for classical.
Save	Click to save and activate your settings.

IP Aliasing

Path: Network > Internet > IP Aliasing

A single WAN Ethernet port can be accessed via multiple IP addresses by adding an alias to the port. This is done by configuring an IP Alias address. To edit or delete any existing aliases, right-click the alias and select either **Edit** or **Delete**.

To create a new alias:
1. Click **Network** > **Internet** > **IP Aliasing**.
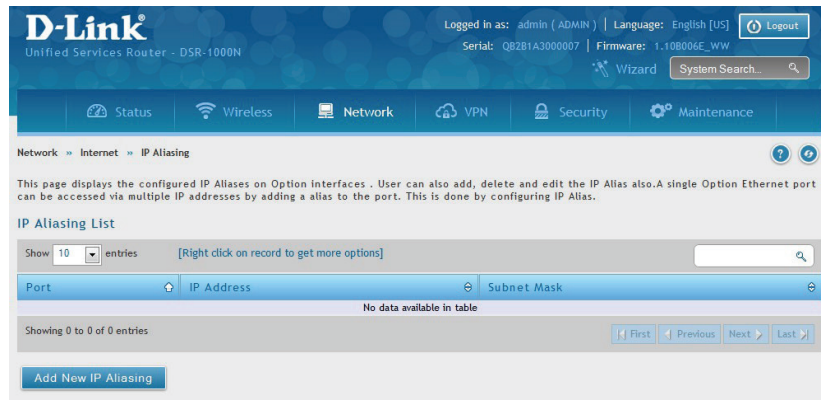

2. Click **Add New IP Aliasing**.
3. Enter the following information and click **Save**.

Field	Description
Interface	Select either **WAN1** or **WAN2**.
IP Address	Enter an alias IP address for the WAN interface you selected.
Subnet Mask	Enter a subnet mask for the WAN interface you selected.
Save	Click to save and activate your settings.

DMZ Settings

Path: Network > Internet > DMZ Settings

If you set WAN2 port to DMZ, you will need to configure the port here.

To configure the DMZ Settings:

1. Click **Network** > **Internet** > **DMZ Settings**.

2. Complete the fields from the table below and click **Save**.

Field	Description
IP Address	Enter an IP address for the DMZ interface.
Subnet Mask	Enter the subnet mask for the DMZ interface.
DHCP Mode	Select one of the following modes: • **None** - Turns off DHCP. • **DHCP Server** (default) - The router will act as the DHCP server on your network. • **DHCP Relay** - DHCP clients on your network will receive IP address leases from a DHCP server on a different subnet.
DHCP Server	Refer to "DHCP Server" on page 19 for more information.
DHCP Relay	Refer to "DHCP Relay" on page 20 for more information.
Enable DNS Proxy	Toggle to **On** to manually enter DNS and/or WINS server IP address(es). If set to **Off**, your router's LAN IP address will be assigned the DNS server to your clients and the router will get the DNS information from your ISP.
Primary DNS Server	If DNS Proxy is set to ON, enter the primary DNS server IP address.
Secondary DNS Server	If DNS Proxy is set to ON, enter the secondary DNS server IP address.
WINS Server	If DNS Proxy is set to ON, enter the WINS server IP address.
Save	Click to save and activate your settings.

DMZ LAN DHCP Reserved IPs

The router's DHCP server can assign IP settings to your DMZ clients on your network by adding a client's MAC address and the IP address to be assigned. Whenever the router receives a request from a client, the MAC address of that client is compared with the MAC address list present in the database. If an IP address is already assigned to that computer or device in the database, the customized IP address is configured otherwise an IP address is assigned to the client automatically from the DMZ DHCP pool.

To create DHCP reservations:

1. Click **Network** > **Internet** > **DMZ LAN DHCP Reserved IPs**.
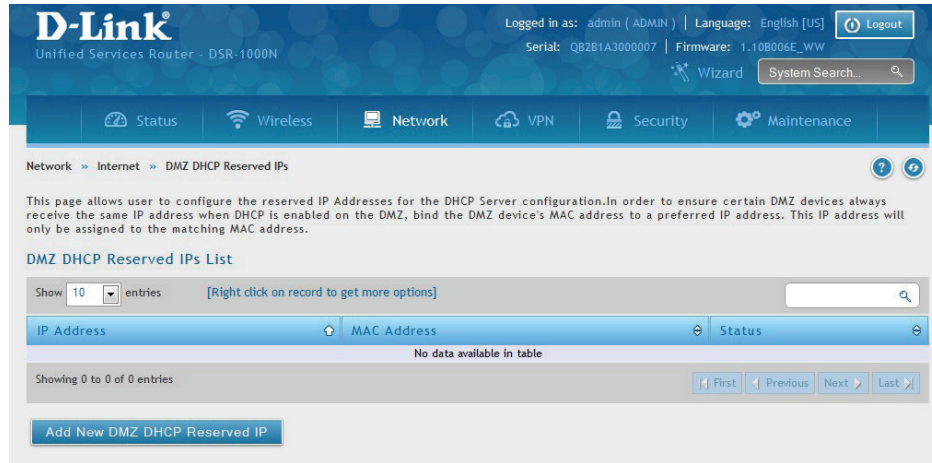

2. Click **Add New DMZ DHCP Reserved IP**.
3. Enter the following information and click **Save**.

Field	Description
DMZ DHCP Reserved IP Enable	Toggle to **ON** to enable this reservation.
IP Address	Enter the IP address you want to assign to this device. Note that this IP address must be in the same range as the starting/ending IP address under DHCP Settings.
MAC Address	Enter the MAC address of this device (xx:xx:xx:xx:xx:xx format).
Save	Click **Save** to save your reservation.

Dynamic DNS Settings

Path: Network > Internet > Dynamic DNS

Dynamic DNS (DDNS) is an Internet service that allows routers with varying public IP addresses to be located using Internet domain names. To use DDNS, you must setup an account with a DDNS provider such as DynDNS. org, D-Link DDNS, or Oray.net.

Each configured WAN can have a different DDNS service if required. Once configured, the router will update DDNS services changes in the WAN IP address so that features that are dependent on accessing the router's WAN via FQDN will be directed to the correct IP address. When you set up an account with a DDNS service, the host and domain name, username, password and wildcard support will be provided by the account provider.

To configure DDNS:
1. Click **Network** > **Internet** > **Dynamic DNS**
2. Click the tab on top to select which WAN port you want to configure DDNS to.
3. Next to *Dynamic DNS Service Type*, select your DDNS service.
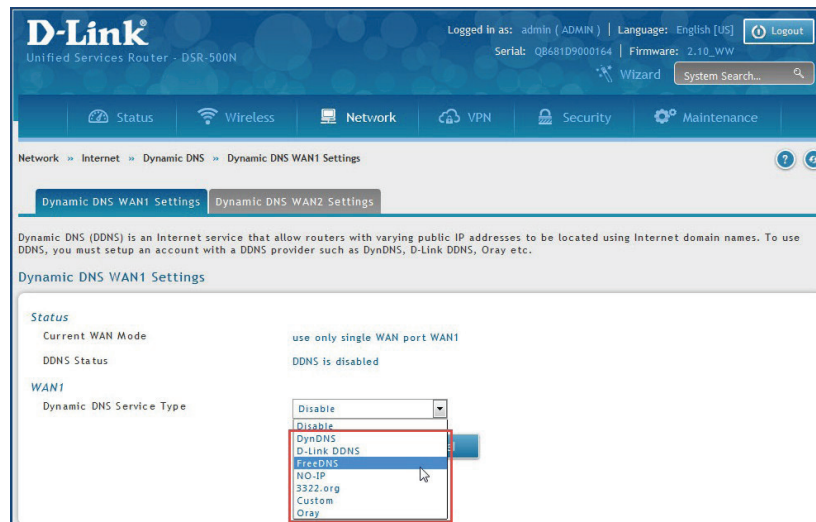

4. Enter the following information and click **Save**. The information below is for DynDNS. Other services will have similar fields.

Field	Description
User Name	Enter your DDNS user name.
Domain Name	Enter the domain name.
Password	Enter your DDNS password.
Status	Displays the current connection status.
Allow Wildcards	Toggle to **ON** to allow wildcards.
Update Periodically	Toggle to **ON** to set a forced update.
Save	Click **Save** to save your reservation.

Traffic Management
Bandwidth Profiles

Path: Network > Internet > Traffic Management > Bandwidth Profiles

Bandwidth profiles allow you to regulate the traffic flow from the LAN to WAN 1 or WAN 2. This is useful to ensure that low priority LAN users (like guests or HTTP service) do not monopolize the available WAN's bandwidth for cost-savings or bandwidth-priority-allocation purposes.

Bandwidth profiles configuration consists of enabling the bandwidth control feature from the GUI and adding a profile which defines the control parameters. The profile can then be associated with a traffic selector, so that bandwidth profile can be applied to the traffic matching the selectors. Selectors are elements like IP addresses or services that would trigger the configured bandwidth regulation.

To edit, delete, or create a new bandwidth profile:
1. Click **Network** > **Internet** > **Traffic Management** > **Bandwidth Profiles**.
2. Toggle *Enable Bandwidth Profiles* to **ON** and click **Save**.
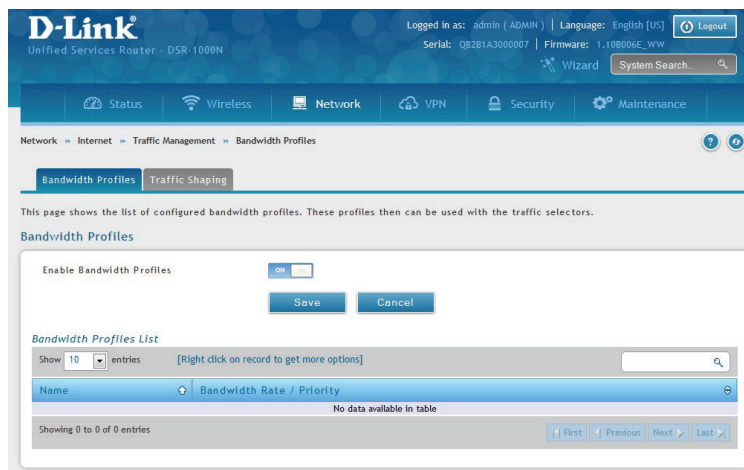

3. Click **Add New Bandwidth Profile**.
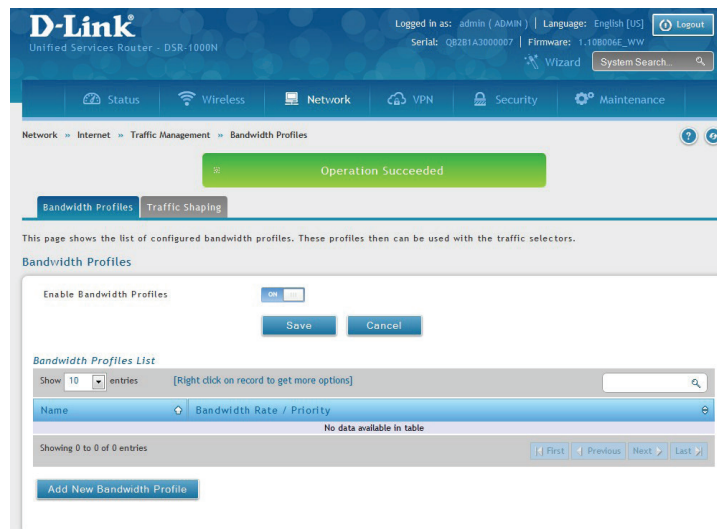

4. Enter the following information and click **Save**.

Field	Description
Name	Enter a name for your profile. This identifier is used to associate the configured profile to the traffic selector.
Policy Type	Select the policy type (**Inbound** or **Outbound**) from the drop-down menu.
WAN Interface	Select which WAN interface you want to associate this profile with.
Profile Type	Select either **Priority** or **Rate** from the drop-down menu.
Priority	If you selected *Priority*, select **Low**, **Medium**, or **High**.
Minimum Bandwidth Rate	If you selected *Rate*, enter the minimum bandwidth rate.
Maximum Bandwidth Rate	If you selected *Rate*, enter the maximum bandwidth rate.
Save	Click **Save** to save your reservation.

Traffic Shaping

Path: Network > Internet > Traffic Management > Traffic Shaping

Once a profile has been created it can then be associated with a traffic flow from the LAN to WAN. Traffic selector configuration binds a bandwidth profile to a type or source of LAN traffic with the following settings.

To create a traffic selector:
1. Click **Network** > **Internet** > **Traffic Management** > **Traffic Shaping**.
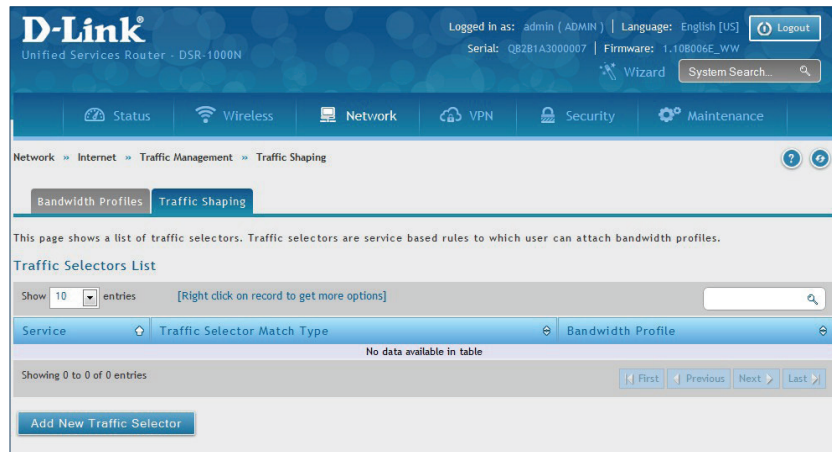

2. Click **Add New Traffic Selector**.

3. Complete the fields from the table below and click **Save**.

Field	Description
Available Profiles	Select a bandwidth profile from the drop-down menu.
Service	Select a service from the drop-down menu.
Traffic Selector Match Type	Select **IP** or **MAC Address**.
IP Address	If you selected IP, enter the IP address of the source associated with this profile.
Subnet Mask	If you selected IP, enter a subnet mask.
MAC Address	If you selected MAC, enter the MAC address of the source associated with this profile.
Save	Click to save and activate your settings.

Routing
Static Routes

Path: Network > Routing > Static Routes

Manually adding static routes to this device allows you to define the path selection of traffic from one interface to another. There is no communication between this router and other devices to account for changes in the path; once configured the static route will be active and effective until the network changes.

The List of Static Routes displays all routes that have been added manually by an administrator and allows several operations on the static routes.

To create a new static route:
1. Click **Network** > **Routing** > **Static Routes**.
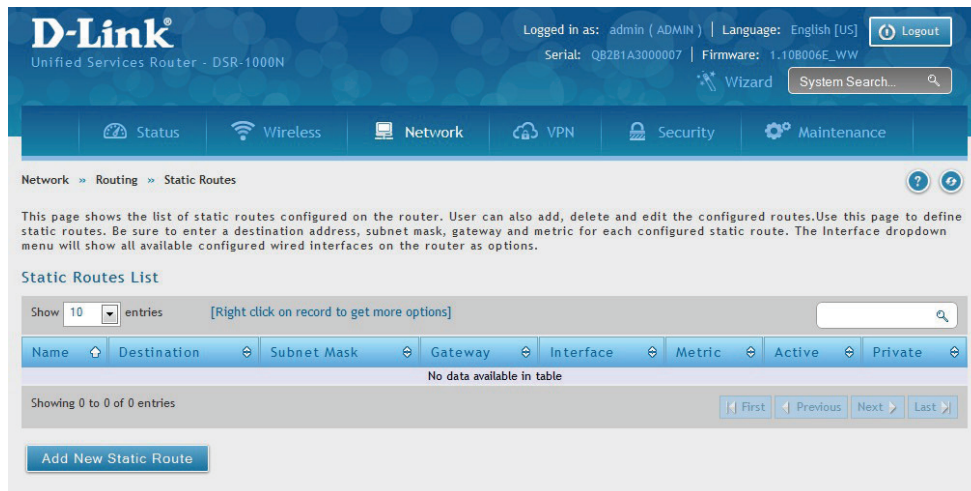

2. Click **Add New Static Route**.
3. Complete the fields in the table on the next page and click **Save**.

Field	Description
Route Name	Enter a name for your route.
Active	Toggle to **ON** to activate this route or to **OFF** to deactivate.
Private	Toggle to **ON** to make this route private. If the route is made private, then the route will not be shared in a RIP broadcast or multicast.
Destination IP Address	Enter the IP address of the static route's destination.
IP Subnet Mask	Enter the subnet mask of the static route.
Interface	The physical network interface (WAN1, WAN2, WAN3, DMZ or LAN), through which this route is accessible.
Gateway IP Address	IP address of the gateway through which the destination host or network can be reached.
Metric	Determines the priority of the route. If multiple routes to the same destination exist, the route with the lowest metric is chosen.
Save	Click **Save** to save your route.

RIP

Path: Network > Routing > RIP

Dynamic routing using the Routing Information Protocol (RIP) is an Interior Gateway Protocol (IGP) that is common in LANs. With RIP this router can exchange routing information with other supported routers in the LAN and allow for dynamic adjustment of routing tables in order to adapt to modifications in the LAN without interrupting traffic flow.

Note: *The DSR-150/150N/250/250N routers do not support RIP.*

To configure RIP:
1. Click **Network** > **Routing** > **RIP**.

2. Complete the fields in the table below and click **Save**.

Field	Description
Direction	The RIP direction will define how this router sends and receives RIP packets. Select one of the following: • **Both:** The router both broadcasts its routing table and also processes RIP information received from other routers. This is the recommended setting in order to fully utilize RIP capabilities. • **Out Only:** The router broadcasts its routing table periodically but does not accept RIP information from other routers. • **In Only:** The router accepts RIP information from other routers, but does not broadcast its routing table. • **None:** The router neither broadcasts its route table nor does it accept any RIP packets from other routers. This effectively disables RIP.
Version	The RIP version is dependent on the RIP support of other routing devices in the LAN. • **Disabled:** This is the setting when RIP is disabled. • **RIP-1:** A class-based routing version that does not include subnet information. This is the most commonly supported version. • **RIP-2:** Includes all the functionality of RIPv1 plus it supports subnet information. Though the data is sent in RIP-2 format for both RIP-2B and RIP-2M, the mode in which packets are sent is different. RIP-2B broadcasts data in the entire subnet while RIP-2M sends data to multicast addresses. Note: If RIP-2B or RIP-2M is the selected version, authentication between this router and other routers (configured with the same RIP version) is required. MD5 authentication is used in a first/second key exchange process. The authentication key validity lifetimes are configurable to ensure that the routing information exchange is with current and supported routers detected on the LAN.
Save	Click **Save** to save your settings.

OSPF

Path: Network > Routing > OSPF
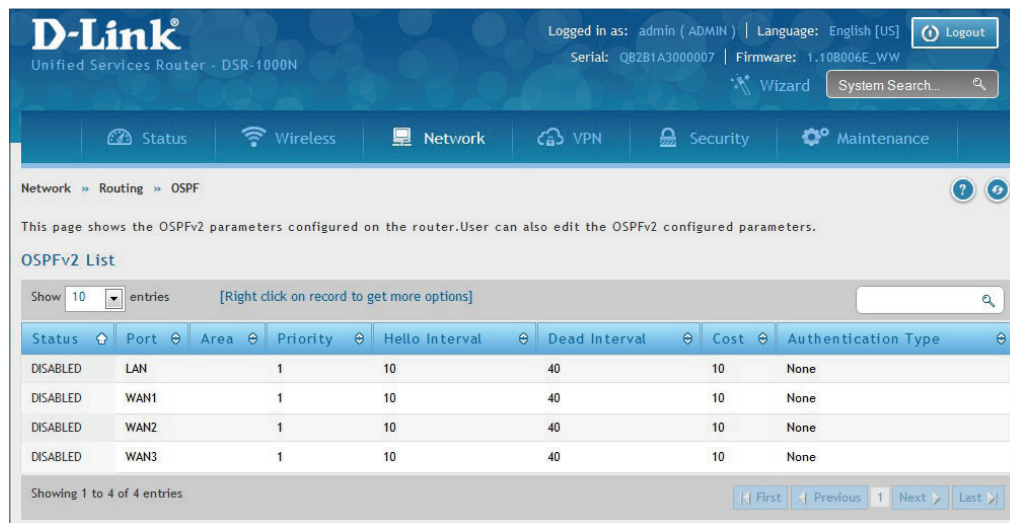

OSPF is an interior gateway protocol that routes Internet Protocol (IP) packets solely within a single routing domain. It gathers link state information from available routers and constructs a topology map of the network.

OSPF version 2 is a routing protocol which described in RFC2328 - OSPF Version 2. OSPF is IGP (Interior Gateway Protocols). OSPF is widely used in large networks such as ISP backbone and enterprise networks.

Note: *The DSR-150/150N/250/250N routers do not support OSPFv2.*

To configure OSPF:
    1. Click **Network** > **Routing** > **OSPF**.

    2. Right-click the port you want to edit (LAN/WAN1/WAN2/WAN3) and select **Edit**.
    3. Complete the fields in the table on the next page and click **Save**.

Field	Description
OSPFv2 Enable	Toggle **ON** to enable OSPF.
Interface	Displays the physical network interface on which OSPFv2 is Enabled/Disabled.
Area	Enter the area to which the interface belongs. Two routers having a common segment; their interfaces have to belong to the same area on that segment. The interfaces should belong to the same subnet and have similar mask.
Priority	Helps to determine the OSPFv2 designated router for a network. The router with the highest priority will be more eligible to become Designated Router. Setting the value to 0 makes the router ineligible to become Designated Router. The default value is 1. Lower the value means higher the priority.
Hello Interval	The number of seconds for Hello Interval timer value. Enter the number in seconds that the Hello packet will be sent. This value must be the same for all routers attached to a common network. The default value is 10 seconds.
Dead Interval	The number of seconds that a device's hello packets must not have been seen before its neighbors declare the OSPF router down. This value must be the same for all routers attached to a common network. The default value is 40 seconds. OSPF requires these intervals to be exactly the same between two neighbors. If any of these intervals are different, these routers will not become neighbors on a particular segment.
Cost	Enter the cost of sending a packet on an OSPFv2 interface.
Authentication Type	Select one of the following authentication types: • **None:** The interface does not authenticate OSPF packets. • **Simple:** OSPF packets are authenticated using simple text key. • **MD5:** The interface authenticates OSPF packets with MD5 authentication.
Md5 Key ID	If MD5 authentication is selected, enter the MD5 key ID.
Md5 Authentication Key	If MD5 authentication is selected, enter the MD5 authentication key.
Save	Click **Save** to save your settings.

OSPF support on L2TP over IPsec

Apart from LAN, WAN1 and WAN2, the user can exchange routes via L2TP over IPsec. OSPF supports a virtual interface created in L2TP over an IPsec channel. The static routes which are added have to be exchanged over these interfaces.

L2TP over IPsec wraps a stimulated data link layer in IPsec. Plain IPsec just encrypts the network layer. When the L2TP over IPsec configuration is saved, the tunnel initiation starts automatically but the establishment of the tunnel depends on the configuration at the client and the server side, and the response from the server.

Ensure that the L2TP tunnel over the IPsec is established before enabling OSPF

Protocol Binding

Path: Network > Routing > Protocol Binding

Protocol bindings are useful when the Load Balancing feature is in use. Selecting from a list of configured services or any of the user-defined services, the type of traffic can be assigned to go over only one of the available WAN ports. For increased flexibility the source network or machines can be specified as well as the destination network or machines. For example, the VOIP traffic for a set of LAN IP addresses can be assigned to one WAN and any VOIP traffic from the remaining IP addresses can be assigned to the other WAN link. Protocol bindings are only applicable when load balancing mode is enabled and more than one WAN is configured.

To add, edit, or delete a protocol binding entry:
1. Click **Network** > **Routing** > **Protocol Binding**.
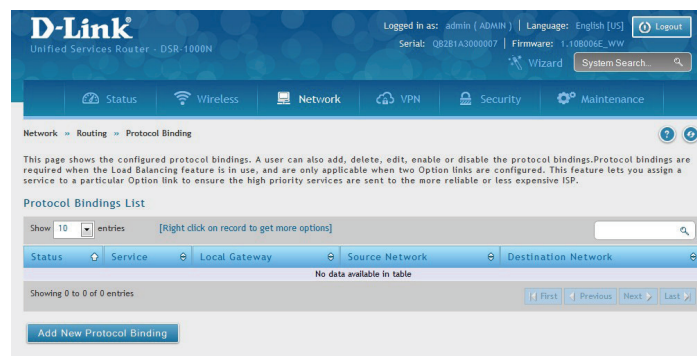

2. Right-click a current entry and select **Edit** or **Delete**. To add a new entry, click **Add New Protocol Binding**.
3. Complete the fields in the table below and click **Save**.

Field	Description
Service	Select a service from the drop-down menu.
Local Gateway	Select a WAN interface.
Source Network	Select the source network: **Any**, **Single Address**, or **Address Range**. If Single Address or Address Range is selected, enter the IP address or IP range.
Destination Network	Select the destination network: **Any**, **Single Address**, or **Address Range**. If Single Address or Address Range is selected, enter the IP address or IP range.
Save	Click **Save** to save your settings.

IPv6
IP Mode

Path: Network > IPv6 > IP Mode

This page allows you to configure the IP protocol version to be used on the router. In order to support IPv6 on your local network (LAN), you must set the router to be in IPv4 / IPv6 mode. This mode will allow IPv4 nodes to communicate with IPv6 devices through this router.

To enable IPv6 on the router:
1. Click **Network** > **IPv6** > **IP Mode**.
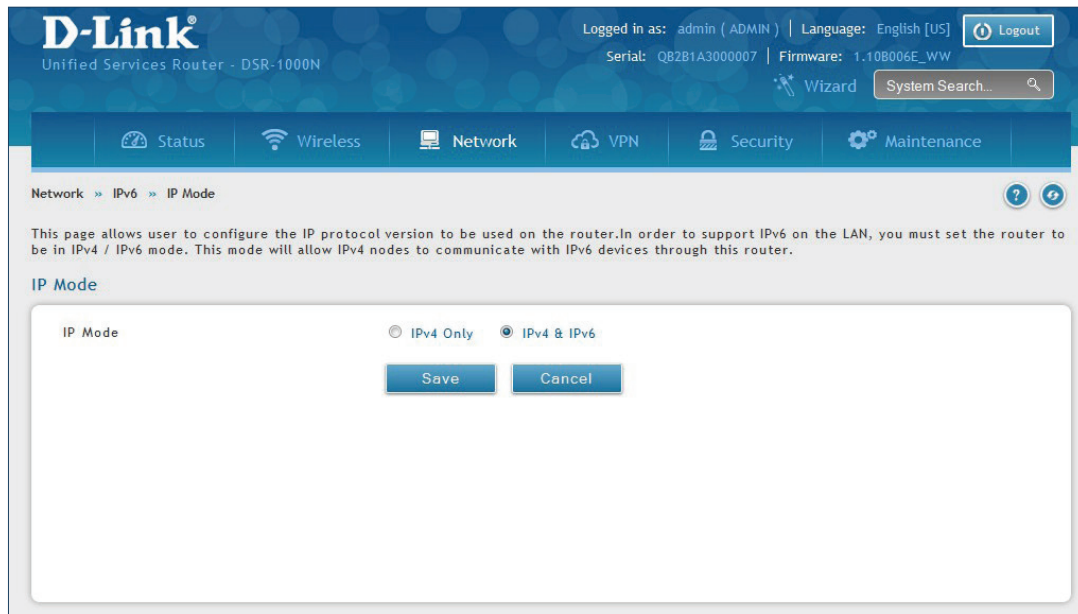

2. Select **IPv4 & IPv6**.
3. Click **Save**.

WAN Settings

Path: Network > IPv6 > WAN1 Settings

For IPv6 WAN connections, this router can have a static IPv6 address or receive connection information when configured as a DHCPv6 client. In the case where the ISP assigns you a fixed address to access the internet, the static configuration settings must be completed. In addition to the IPv6 address assigned to your router, the IPv6 prefix length defined by the ISP is needed. The default IPv6 Gateway address is the server at the ISP that this router will connect to for accessing the internet. The primary and secondary DNS servers on the ISP's IPv6 network are used for resolving internet addresses, and these are provided along with the static IP address and prefix length from the ISP.

When the ISP allows you to obtain the WAN IP settings via DHCP, you need to provide details for the DHCPv6 client configuration. The DHCPv6 client on the gateway can be either stateless or stateful. If a stateful client is selected the gateway will connect to the ISP's DHCPv6 server for a leased address. For stateless DHCP there need not be a DHCPv6 server available at the ISP, rather ICMPv6 discover messages will originate from this gateway and will be used for auto configuration.

A third option to specify the IP address and prefix length of a preferred DHCPv6 server is available as well.

Dynamic IP

To configure a dynamic (DHCP) IPv6 Internet connection:
1. Click **Network** > **IPv6** > **WAN1 Settings**.

2. Complete the fields in the table below and click **Save**.

Field	Description
Connection Type	Select **DHCPv6** from the drop-down menu.
DHCPv6 Auto Configuration	Select either **Stateless Address** or **Stateful Address**.
Prefix Delegation	Select this option to request router advertisement prefix from any available DHCPv6 servers available on the ISP, the obtained prefix is updated to the advertised prefixes on the LAN side. This option can be selected only in Stateless Address Auto Configuration mode of DHCPv6 Client.
Save	Click **Save** to save your settings.

Static IP

To configure a static IPv6 Internet connection:

1. Click **Network** > **IPv6** > **WAN1 Settings**.

2. Complete the fields in the table below and click **Save**.

Field	Description
Connection Type	Select **Static**.
IPv6 Address	Enter the IP address supplied by your ISP.
IPv6 Prefix Length	Enter the IPv6 prefix length supplied by your ISP.
Default IPv6 Gateway	Enter the IPv6 gateway address supplied by your ISP.
Primary DNS Server	Enter the primary DNS server IP address.
Secondary DNS Server	Enter the secondary DNS server IP address.
Save	Click **Save** to save and activate your settings.

PPPoE

To configure a dynamic (DHCP) IPv6 Internet connection:

1. Click **Network** > **IPv6** > **WAN1 Settings**.

2. Complete the fields in the table below and click **Save**.

Field	Description
Connection Type	Select **PPPoE**.
User Name	Enter your PPPoE user name.
Password	Enter your PPPoE password.
Authentication Type	Select the authentication type from the drop-down menu (Auto-negotiate/PAP/CHAP/MS-CHAP/MS-CHAPv2).
DHCPv6 Options	Select the mode of DHCPv6 client that will start in this mode (Disable dhcpv6/Stateless dhcpv6/Stateful dhcpv6/Stateless dhcpv6 with prefix delegation.
Primary DNS Server	Enter the primary DNS server IP address.
Secondary DNS Server	Enter the secondary DNS server IP address.
Save	Click **Save** to save and activate your settings.

Static Routing

Path: Network > IPv6 > Static Routing

Manually adding static routes to this device allows you to define the path selection of traffic from one interface to another. There is no communication between this router and other devices to account for changes in the path; once configured the static route will be active and effective until the network changes.

The List of Static Routes displays all routes that have been added manually by an administrator and allows several operations on the static routes.

To create a new static route:
1. Click **Network** > **IPv6** > **Static Routing**.
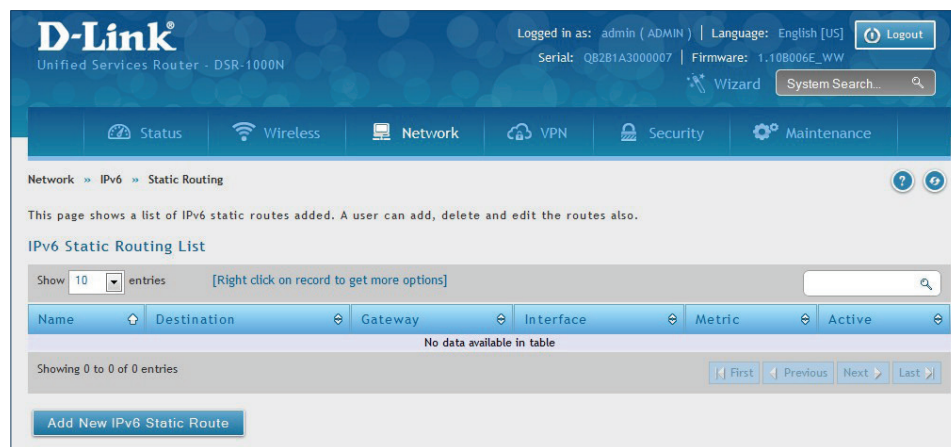

2. Click **Add New IPv6 Static Route**.
3. Complete the fields in the table on the next page and click **Save**.

Field	Description
Route Name	Enter a name for your route.
Active	Toggle to **ON** to activate this route or to **OFF** to deactivate.
IPv6 Destination	Enter the IP address of the static route's destination.
IPv6 Prefix Length	Enter the prefix length of the static route.
Interface	The physical network interface (WAN1, WAN2, WAN3, DMZ or LAN), through which this route is accessible.
IPv6 Gateway	IPv6 address of the gateway through which the destination host or network can be reached.
Metric	Determines the priority of the route. If multiple routes to the same destination exist, the route with the lowest metric is chosen.
Save	Click **Save** to save your route.

OSPFv3

Path: Network > IPv6 > OSPFv3

OSPF is an interior gateway protocol that routes Internet Protocol (IP) packets solely within a single routing domain. It gathers link state information from available routers and constructs a topology map of the network.

Open Shortest Path First version 3 (OSPFv3) supports IPv6. To enable an OSPFv3 process on a router, you need to enable the OSPFv3 process globally, assign the OSPFv3 process a router ID, and enable the OSPFv3 process on related interfaces.

Note: The DSR-150/150N/250/250N routers do not support OSPFv3.

To configure OSPF:

    1. Click **Network** > **IPv6** > **OSPFv3**.

    2. Right-click the port you want to edit (LAN/WAN1/WAN2) and select **Edit**.
    3. Complete the fields in the table on the next page and click **Save**.

Field	Description
OSPFv3 Enable	Toggle **ON** to enable OSPFv3.
Interface	Displays the physical network interface on which OSPFv3 is Enabled/Disabled.
Priority	Helps to determine the OSPFv3 designated router for a network. The router with the highest priority will be more eligible to become Designated Router. Setting the value to 0 makes the router ineligible to become Designated Router. The default value is 1. Lower the value means higher the priority.
Hello Interval	The number of seconds for Hello Interval timer value. Enter the number in seconds that the Hello packet will be sent. This value must be the same for all routers attached to a common network. The default value is 10 seconds.
Dead Interval	The number of seconds that a device's hello packets must not have been seen before its neighbors declare the OSPF router down. This value must be the same for all routers attached to a common network. The default value is 40 seconds. OSPF requires these intervals to be exactly the same between two neighbors. If any of these intervals are different, these routers will not become neighbors on a particular segment.
Cost	Enter the cost of sending a packet on an OSPFv3 interface.
Save	Click **Save** to save your settings.

6 to 4 Tunneling

Path: Network > IPv6 > 6 to 4 Tunneling

6to4 is an Internet transition mechanism for migrating from IPv4 to IPv6, a system that allows IPv6 packets to be transmitted over an IPv4 network. Select the check box to Enable Automatic Tunneling and allow traffic from an IPv6 LAN to be sent over an IPv4 Option to reach a remote IPv6 network.

To enable 6 to 4 tunneling:
1. Click **Network** > **IPv6** > **6 to 4 Tunneling**.
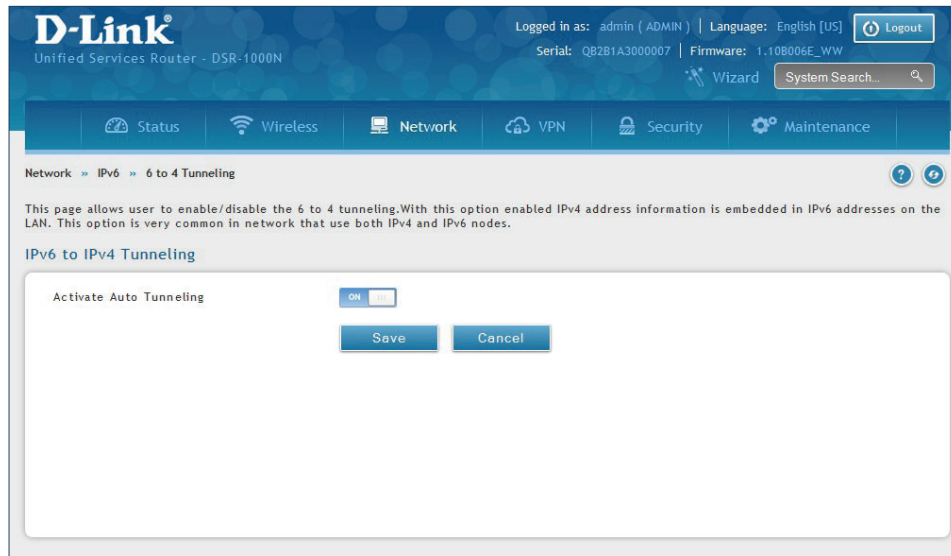

2. Toggle *Activate Auto Tunneling* to **ON**.
3. Click **Save**.

ISATAP

Path: Network > IPv6 > 6 to 4 Tunneling

ISATAP (Intra-Site Automatic Tunnel Addressing Protocol) is an IPv6 transition mechanism meant to transmit IPv6 packets between dual-stack nodes on top of an IPv4 network. ISATAP specifies an IPv6-IPv4 compatibility address format as well as a means for site border router discovery. ISATAP also specifies the operation of IPv6 over a specific link layer - that being IPv4 used as a link layer for IPv6.

To add, edit, or delete a ISATAP entry:
1. Click **Network** > **IPv6** > **ISATAP**.
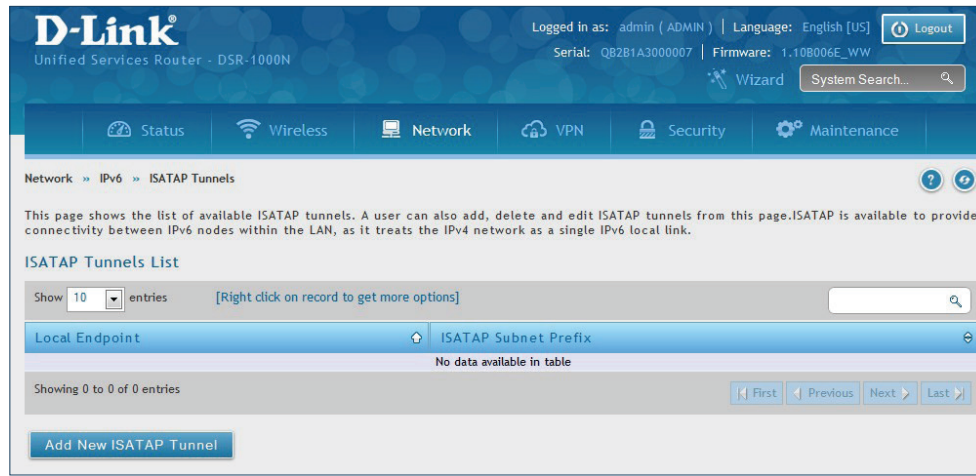

2. Right-click a current entry and select **Edit** or **Delete**. To add a new entry, click **Add New ISATAP Tunnel**.
3. Complete the fields in the table below and click **Save**.

Field	Description
ISATAP Subnet Prefix	This is the 64-bit subnet prefix that is assigned to the logical ISATAP subnet for this intranet. This can be obtained from your ISP or internet registry, or derived from RFC 4193.
End Point Address	This is the endpoint address for the tunnel that starts with this router. The endpoint can be the LAN interface (assuming the LAN is an IPv4 network), or a specific LAN IPv4 address.
IPv4 Address	The end point address if not the entire LAN.
Save	Click **Save** to save your settings.

LAN Settings
DHCPv6 Server

Path: Network > IPv6 > LAN Settings > IPv6 LAN Settings

In IPv6 mode, the LAN DHCP server is disabled by default (similar to IPv4 mode). The DHCPv6 server will serve IPv6 addresses from configured address pools with the IPv6 Prefix Length assigned to the LAN.

The default IPv6 LAN address for the router is fec0::1. You can change this 128-bit IPv6 address based on your network requirements. The other field that defines the LAN settings for the router is the prefix length. The IPv6 network (subnet) is identified by the initial bits of the address called the prefix. By default this is 64 bits long. All hosts in the network have common initial bits for their IPv6 address; the number of common initial bits in the network's addresses is set by the prefix length field.

To configure IPv6 LAN settings on the router:
    1. Click **Network** > **IPv6** > **LAN Settings** > **IPv6 LAN Settings**.

    2. Complete the fields in the table on the next page and click **Save**.

Field	Description
IPv6 Address	Enter the IPv6 LAN address for the router.
IPv6 Prefix Length	Enter the prefix length.
Status	Toggle to **ON** to enable DHCPv6.
Mode	The IPv6 DHCP server is either stateless or stateful. If stateless is selected an external IPv6 DHCP server is not required as the IPv6 LAN hosts are auto-configured by this router. In this case the router advertisement daemon (RADVD) must be configured on this device and ICMPv6 router discovery messages are used by the host for auto-configuration. There are no managed addresses to serve the LAN nodes. If stateful is selected the IPv6 LAN host will rely on an external DHCPv6 server to provide required configuration settings.
Domain Name	Enter a domain name (optional).
Server Preference	Server Preference is used to indicate the preference level of this DHCP server. DHCP advertise messages with the highest server preference value to a LAN host are preferred over other DHCP server advertise messages. The default is 255.
DNS Servers	The DNS server details can be manually entered here (primary/secondary options. An alternative is to allow the LAN DHCP client to receive the DNS server details from the ISP directly. By selecting Use DNS proxy, this router acts as a proxy for all DNS requests and communicates with the ISP's DNS servers (a WAN configuration parameter).
Lease / Rebind Time	Enter the duration of the DHCPv6 lease from this router to the LAN client.
Prefix Delegation	Toggle to **ON** to enable prefix delegation in DHCPv6 server. This option can be selected only in Stateless Address Auto Configuration mode of DHCPv6 server.
Save	Click **Save** at the bottom to save and activate your settings.

IPv6 Address Pools

Path: Network > IPv6 > LAN Settings > IPv6 Address Pools

This feature allows you to define the IPv6 delegation prefix for a range of IP addresses to be served by the router's DHCPv6 server. Using a delegation prefix you can automate the process of informing other networking equipment on the LAN of DHCP information specific for the assigned prefix.

To add, edit, or delete a IPv6 address pool entry:

1. Click **Network** > **IPv6** > **LAN Settings** > **IPv6 Address Pools** tab.
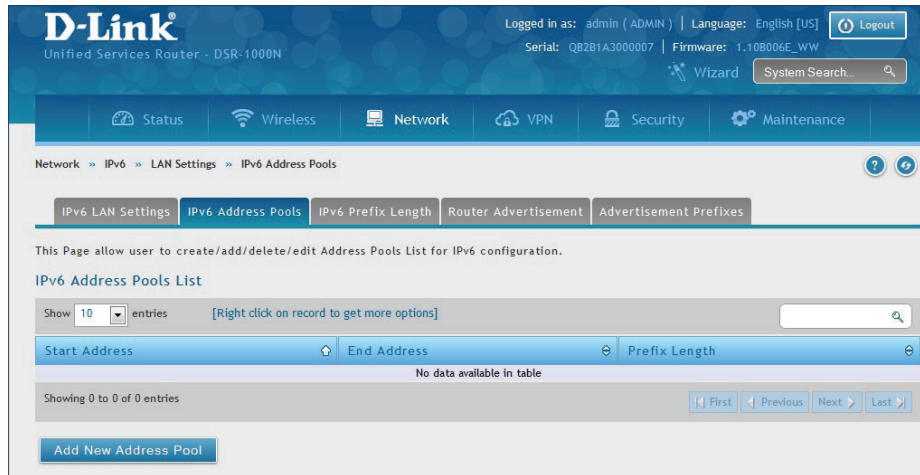

2. Right-click a current entry and select **Edit** or **Delete**. To add a new entry, click **Add New Address Pool**.
3. Complete the fields in the table below and click **Save**.

Field	Description
Start IPv6 Address	Enter the starting IPv6 LAN address.
End IPv6 Address	Enter the ending IPv6 LAN address.
Prefix Length	Enter the prefix length.
Save	Click **Save** at the bottom to save and activate your settings.

IPv6 Prefix Length

Path: Network > IPv6 > LAN Settings > IPv6 Prefix Length

To add, edit, or delete a IPv6 prefix length entry:

1. Click **Network** > **IPv6** > **LAN Settings** > **IPv6 Prefix Length** tab.
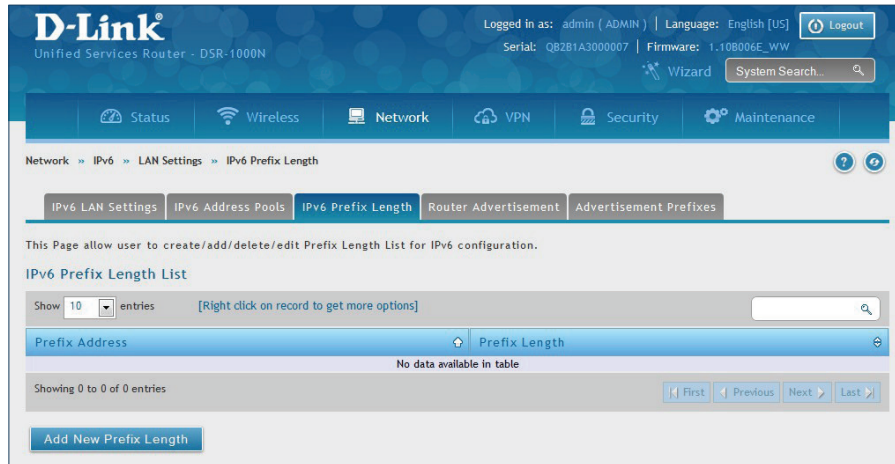

2. Right-click a current entry and select **Edit** or **Delete**. To add a new entry, click **Add New Prefix Length**.
3. Complete the fields in the table below and click **Save**.

Field	Description
Profile	Enter a name for this profile.
Prefix Length	Enter the prefix length.
Save	Click **Save** at the bottom to save and activate your settings.

Router Advertisement

Path: Network > IPv6 > LAN Settings > Router Advertisement

Router Advertisements are analogous to IPv4 DHCP assignments for LAN clients, in that the router will assign an IP address and supporting network information to devices that are configured to accept such details. Router Advertisement is required in an IPv6 network is required for stateless auto configuration of the IPv6 LAN. By configuring the Router Advertisement Daemon on this router, the router will listen on the LAN for router solicitations and respond to these LAN hosts with router advisements.

To configure router advertisement settings:
1. Click **Network** > **IPv6** > **LAN Settings** > **Router Advertisement** tab.

2. Complete the fields in the table on the next page and click **Save**.

Field	Description
Status	Toggle to **ON** to enable this feature.
Advertise Mode	Select **Unsolicited Multicast** to send router advertisements (RA's) to all interfaces in the multicast group. To restrict RA's to well-known IPv6 addresses on the LAN, and thereby reduce overall network traffic, select **Unicast only**.
Advertise Interval	When advertisements are unsolicited multicast packets, this interval sets the maximum time between advertisements from the interface. The actual duration between advertisements is a random value between one third of this field and this field. The default is 30 seconds.
Managed	Toggle to **ON** to use the administered/stateful protocol for address auto-configuration. If set to **OFF**, the host uses administered/stateful protocol for non-address auto configuration.
Other	Toggle to **ON** to use administered/stateful protocol of other (i.e., non-address) information auto configuration.
Router Preference	This parameter (low/medium/high) determines the preference associated with the RADVD process of the router. This is useful if there are other RADVD-enabled devices on the LAN as it helps avoid conflicts for IPv6 clients.
MTU	The router advertisement will set this maximum transmission unit (MTU) value for all nodes in the LAN that are auto-configured by the router. The default is 1500.
Router Lifetime	This value is present in RAs and indicates the usefulness of this router as a default router for the interface. The default is 3600 seconds. Upon expiration of this value, a new RADVD exchange must take place between the host and this router.
Save	Click **Save** at the bottom to save and activate your settings.

Advertisement Prefixes

Path: Network > IPv6 > LAN Settings > Advertisement Prefixes

Router advertisements configured with advertisement prefixes allow this router to inform hosts how to perform stateless address auto configuration. Router advertisements contain a list of subnet prefixes that allow the router to determine neighbors and whether the host is on the same link as the router.

To add, edit, or delete an advertisement prefix entry:

1. Click **Network** > **IPv6** > **LAN Settings** > **Advertisement Prefixes** tab.
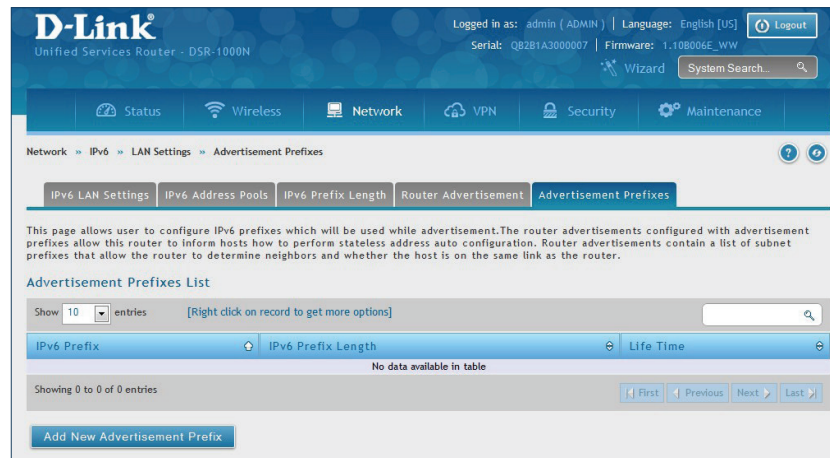

2. Right-click a current entry and select **Edit** or **Delete**. To add a new entry, click **Add New Advertisement Length**.

3. Complete the fields in the table below and click **Save**.

Field	Description
IPv6 Prefix Type	To ensure hosts support IPv6 to IPv4 tunnel select the **6to4** prefix type. Selecting **Global/Local/ISATAP** will allow the nodes to support all other IPv6 routing options.
SLA ID	The SLA ID (Site-Level Aggregation Identifier) is available when 6to4 Prefixes are selected. This should be the interface ID of the router's LAN interface used for router advertisements.
IPv6 Prefix	When using Global/Local/ISATAP prefixes, this field is used to define the IPv6 network advertised by this router.
IPv6 Prefix Length	This value indicates the number contiguous, higher order bits of the IPv6 address that define up the network portion of the address. Typically this is 64.
Prefix Lifetime	This defines the duration (in seconds) that the requesting node is allowed to use the advertised prefix. It is analogous to DHCP lease time in an IPv4 network.
Save	Click **Save** at the bottom to save and activate your settings.

IPv6 Tunnels Status

Path: Network > IPv6 > IPv6 Tunnels Status

This page displays the current status of IPv6 Tunnels.
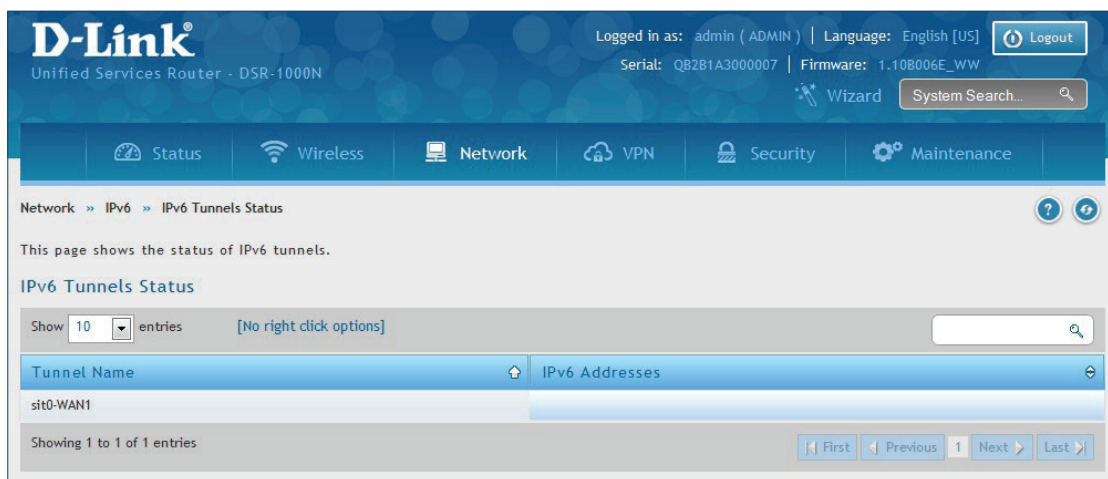

Wireless Settings

The Wireless Network Setup Wizard is available for users new to wireless networking. By going through a few configuration pages you can enable a Wi-Fi™ network on your LAN and allow supported 802.11 clients to connect to the configured Access Point. To run the wizard, refer to "#6 Wireless Network Setup" on page 12.

Access Points

Path: Wireless > General > Access Points

This router has an integrated 802.11n/ac radio that allows you to create an access point for wireless LAN clients. The security/encryption/authentication options are grouped in a wireless Profile, and each configured profile will be available for selection in the AP configuration menu. The profile defines various parameters for the AP, including the security between the wireless client and the AP, and can be shared between multiple APs instances on the same device when needed.

Up to four unique wireless networks can be created by configuring multiple "virtual" APs . Each such virtual AP appears as an independent AP (unique SSID) to supported clients in the environment, but is actually running on the same physical radio integrated with this router.

Note: Profiles may be thought of as a grouping of AP parameters that can then be applied to not just one but multiple AP instances (SSIDs), thus avoiding duplication if the same parameters are to be used on multiple AP instances or SSIDs.

To add, edit, or delete an access point entry:
1. Click **Wireless** > **General** > **Access Points**.

2. Right-click a current entry and select **Edit** or **Delete**. To add a new entry, click **Add New Access Point**.

3. Complete the fields in the table below and click **Save**.

Field	Description
AP Name	Enter a name for your virtual access point.
Profile Name	Select a profile from the drop-down menu to associate this access point with. If you do not want to use the default profile, create a profile (refer to the next page) and then create an access point.
Active Time	Toggle to **ON** to "turn on" this access point.
Schedule Control	Toggle to **ON** if you want to specify a time to have this access point turned on.
Start/Stop Time	Enter a start and stop time.
WLAN Partition	Toggle to **ON** to prevent associated wireless clients from communicating with each other.
Save	Click **Save** at the bottom to save and activate your settings.

Profiles

Path: Wireless > General > Profiles

Creating a profile allows you to assign the security type, encryption and authentication to use when connecting the AP to a wireless client. The default mode is "open", i.e., no security. This mode is insecure as it allows any compatible wireless clients to connect to an AP configured with this security profile.

To create a new profile, use a unique profile name to identify the combination of settings. Configure a unique SSID that will be the identifier used by the clients to communicate to the AP using this profile. By choosing to broadcast the SSID, compatible wireless clients within range of the AP can detect this profile's availability. The AP offers all advanced 802.11 security modes, including WEP, WPA, and WPA2.

To add, edit, or delete a profile:

1. Click **Wireless** > **General** > **Profiles**.

2. Right-click a current entry and select **Edit** or **Delete**. To add a new entry, click **Add New Access Point**.
3. Complete the fields in the table on the next page and click **Save**.

Field	Description
Profile Name	Enter a name for your profile.
SSID	Enter a name for your wireless network (SSID).
Broadcast SSID	Toggle to **ON** if you want your SSID broadcast openly or toggle to **OFF** to hide it. Clients will have to know the SSID to connect.

Security	Select what kind of wireless security you want to use:
	  • **Open:** Select this option to create a public "open" network to allow unauthenticated devices to access this wireless gateway.
	  • **WEP (Wired Equivalent Privacy):** This option requires a static (pre -shared) key to be shared between the AP and wireless client . Note that WEP does not support 802.11n data rates; is it appropriate for legacy 802.11 connections.
	  • **WPA (Wi-Fi Protected Access):** For stronger wireless security than WEP, choose this option. The encryption for WPA will use TKIP and also CCMP if required. The authentication can be a preshared key (PSK), Enterprise mode with RADIUS server, or both. Note that WPA does not support 802.11n data rates; is it appropriate for legacy 802.11 connections.
	  • **WPA2:** This security type uses CCMP encryption (and the option to add TKIP encryption) on either PSK (pre-shared key) or Enterprise (RADIUS Server) authentication.
	  • **WPA + WPA2:** This uses both encryption algorithms, TKIP and CCMP. WPA clients will use TKIP and WPA2 clients will use CCMP encryption algorithms.

Encryption	Select the encryption type:
	  • WEP - Select **Open** or **Shared**.
	  • WPA - Select **TKIP** or **TKIP+CCMP**.
	  • WPA2 - Select **CCMP** or **TKIP+CCMP**.
	  • WPA+WPA2 - **TKIP+CCMP** will be the only option.

Authentication	Select the authentication type:
	  • WEP - Select **64-bit** or **128-bit**.
	  • WPA/WPA2/WPA+WPA2 - Select **PSK** (passphrase), **RADIUS** (RADIUS server), or **PSK+RADIUS** (both).

WEP Passphrase/Key (1-4)	If you selected WEP, enter a passphrase or up to four hexadecimal keys (a-f, 0-9, A-F).
WPA Password	If you selected WPA, WPA2, or WPA+WPA2, enter a WPA password.
Save	Click **Save** at the bottom to save and activate your settings.

The AP configuration page allows you to create a new AP and link to it one of the available profiles. This router supports multiple AP's referred to as virtual access points (VAPs). Each virtual AP that has a unique SSIDs appears as an independent access point to clients. This valuable feature allows the router's radio to be configured in a way to optimize security and throughput for a group of clients as required by the user. To create a VAP, refer to "Access Points" on page 80. After setting the AP name, the profile drop-down menu is used to select one of the configured profiles.

Radio Settings

Path: Wireless > General > Radio Settings

You may configure the channels and power levels available for the AP's enabled on the router. The router has a dual band 802.11n radio, meaning either 2.4 GHz or 5 GHz frequency of operation can be selected (not concurrently though). Based on the selected operating frequency, the mode selection will let you define whether legacy connections or only 802.11n connections (or both) are accepted on configured APs.

The ratified 802.11n support on this radio requires selecting the appropriate broadcast mode, and then defining the channel spacing and control side band for 802.11n traffic. The default settings are appropriate for most networks. For example, changing the channel spacing to 40MHz can improve bandwidth at the expense of supporting earlier 802.11n clients. The available transmission channels are governed by regulatory constraints based on the region setting of the router.

To configure the radio settings:
1. Click **Wireless** > **General** > **Radio Settings**.

2. Complete the fields in the table below and click **Save**.

Field	Description
Operating Frequency	Select **2.4GHz** or **5GHz**.
Mode	Select the 802.11 mode: • 2.4GHz - **g and b**, **g only**, **n and g**, or **n only**. • 5GHz - **a only**, **n and a**, or **n only**.
Channel Spacing	Select the Channel Width: **Auto 20/40** - This is the default setting. Select if you are using both 802.11n and non-802.11n wireless devices. **20MHz** - Select if you are not using any 802.11n wireless clients.
Control Side Band	Select **Upper** or **Lower**. Available for 802.11n only.
Current Channel	Displays the current channel.
Channel	Select the channel you want to use.
Default Transmit Power	Enter the default transmit power (0-31).
Transmit Power	Displays the current transmit power.
Transmission Rate	Select a transmission rate from the drop-down menu. This will lock the transmission rate of your wireless connection. It is strongly recommended to use **Best (Automatic)**.
Save	Click **Save** at the bottom to save and activate your settings.

802.11AC Configuration

Path: Wireless > General >Radio Settings > 5 Ghz

This section provides configuration options to use the DSR-500AC or DSR-1000AC advanced wireless capabilities in the 5 GHz band.

With 802.11AC, data throughput can be significantly increased as compared to 802.11n rates as the channel bandwidth can be as high as 80 MHz. The available channels and spacing bandwidth are regulated by the regulatory setting of the specific country the DSR-500AC or DSR-1000AC is deployed in. By selecting 802.11AC rates, the 5 GHz radio will use the enhance capability of the new design and will send more data in a single packet (via wireless frame aggragation).

Field	Description
Mode	This is the 802.11 modulaition technique being used
Channel Spacing	Distance in MHz between the successive channels
Current Channel	Channel being used in the available spectrum.
Channel	Channel number selected by user, this is defined by the country code for the device.
Default Transmit Power	Output transmit power set by user
Transmit Power	Transmit power currently in use by the radio.
Transmission Rate	Select a transmission rate from the drop-down menu. This will lock the transmission rate of your wireless connection. It is strongly recommended to use **Best (Automatic)**.
Save	Rates used by device to download the data to client.

WMM Settings

Path: Wireless > Advanced > WMM

Wi-Fi Multimedia (WMM) provides basic Quality of Service (QoS) features to IEEE 802.11 networks. WMM prioritizes traffic according to four Access Categories (AC) - voice, video, best effort, and background.

To configure the radio settings:

1. Click **Wireless** > **Advanced** > **WMM**.

2. Complete the fields in the table below and click **Save**.

Field	Description
Profile Name	Select the profile to associate this configuration to from the drop-down menu.
Enable WMM	Toggle to **ON** to enable WMM.
Default Class of Service	Select an available access category (voice, video, best effort, or background) to assign as "default".
IP DSCP / TOS	Under Class of Service, select a service and map it to the IP DSCP / TOS value.
Save	Click **Save** at the bottom to save and activate your settings.

WDS

Path: Wireless > Advanced > WDS

Wireless Distribution System (WDS) is a system enabling the wireless interconnection of access points in a network. This feature is only guaranteed to work between devices of the same type (i.e., using the same chipset/driver).

When you enable WDS, use the same security configuration as the default access point. The WDS links do not have true WPA/WPA2 support, as in there is no WPA key handshake performed. Instead the Session Key to be used with a WDS Peer is computed using a hashing function (similar to the one used for computing a WPA PMK). The inputs to this function are a PSK (configurable by an administrator from the WDS page) and an internal "magic" string (non-configurable).

In effect the WDS links use TKIP/AES encryption, depending on the encryption configured for the default AP. In case the default AP uses mixed encryption (TKIP + AES). The WDS link will use the AES encryption scheme.

Note: *For a WDS link to function properly the Radio settings on the WDS peers have to be the same.*

To configure the radio settings:
1. Click **Wireless** > **Advanced** > **WDS**.

2. Complete the fields in the table below and click **Save**.

Field	Description
WDS Enable	Toggle to **ON** to enable WDS and click **Save**.
WDS Encryption	Displays the current wireless encryption used.
WDS Security	Displays the current security type.
WDS Authentication	Displays the current authentication type.
WDS Passphrase	Enter the WDS passphrase (if WEP, WPA, WPA2, or WPA+WPA2 is enabled).
System MAC Address	Displays the system MAC address.
Add New WDS	Once you enabled WDS (and clicked Save), click Add New WDS and enter the MAC address of a WDS peer. You can add up to four WDS peers.
Save	Click **Save** at the bottom to save and activate your settings.

Advanced Settings

Path: Wireless > Advanced > Advanced Settings

You can modify the 802.11 communication parameters in this page. Generally, the default settings are appropriate for most networks.

1. Click **Wireless** > **Advanced** > **Advanced Settings**.
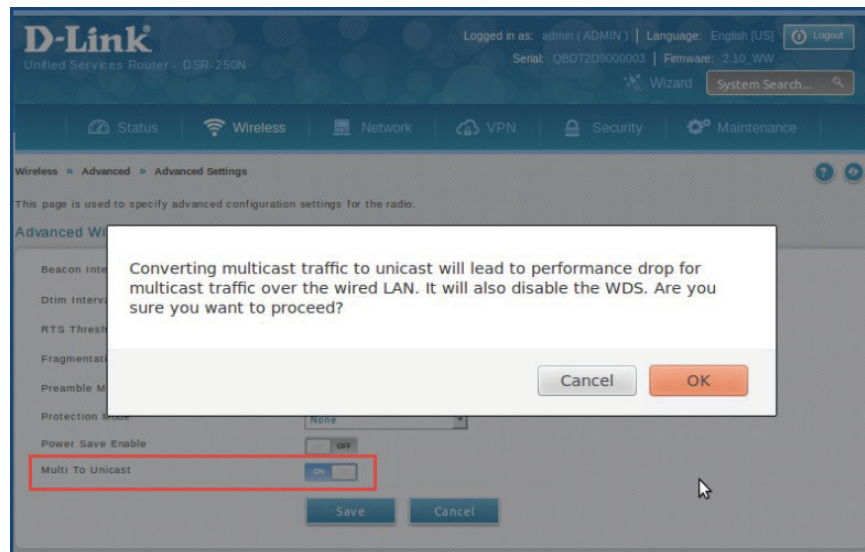

2. Complete the fields in the table below and click **Save**.

Field	Description
Beacon Interval	Beacons are packets sent by an Access Point to synchronize a wireless network. The default value is 100.
DTIM Interval	(Delivery Traffic Indication Message) 3 is the default setting. A DTIM is a countdown informing clients of the next window for listening to broadcast and multicast messages.
RTS Threshold	This value should remain at its default setting of 2432. If inconsistent data flow is a problem, only a minor modification should be made.
Fragmentation Threshold	The fragmentation threshold, which is specified in bytes, determines whether packets will be fragmented. Packets exceeding the 2346 byte setting will be fragmented before transmission. 2346 is the default setting.
Preamble Mode	Select either **Long** or **Short**. The Preamble Type defines the length of the CRC (Cyclic Redundancy Check) block for communication between the Access Point and roaming wireless adapters. High network traffic areas should use Short preamble type.
Protection Mode	Select either **None** or **CTS-to-Self Protection**. Select the CTS-to-Self Protection to enable CTS-to-Self protection mechanism, which is used to minimize collisions among stations in a mixed 802.11b & g environment. The default selection is **None**.
Power Save Enable	Toggle to **ON** to enable the Unscheduled Automatic Power Save Delivery (also referred to as WMM Power Save) feature that allows the radio to conserve power.
Save	Click **Save** at the bottom to save and activate your settings.
Milti to Unicast	Toggle to ON to enable IGMP Snooping on Wireless Clients.

WPS

Path: Wireless > Advanced > WPS

WPS is a simplified method to add supporting wireless clients to the network. WPS is only applicable for APs that employ WPA or WPA2 security. To use WPS, select the eligible VAPs from the drop-down menu of APs that have been configured with this security and enable WPS status for this AP.

The WPS Current Status section outlines the security, authentication, and encryption settings of the selected AP. These are consistent with the AP's profile. There are two setup options:
- **Personal Identification Number (PIN):** The wireless device that supports WPS may have an alphanumeric PIN, if it does add the PIN in this field. The router will connect within 60 seconds of clicking the "Configure via PIN" button immediately below the PIN field. There is no LED indication that a client has connected.
- **Push Button Configuration (PBC):** For wireless devices that support PBC, press and hold the WPS button for two seconds, and then press the WPS button (or initiate WPS via GUI) on your wireless client within two minutes. The AP will detect the wireless device and establish a secure link to the client.

To enable and connect clients using WPS:
1. Click **Wireless** > **Advanced** > **WPS**.
2. Select which VAP you want to perform the WPS process from the drop-down menu.
3. Toggle *WPS Status* to **ON** and click **Save**.
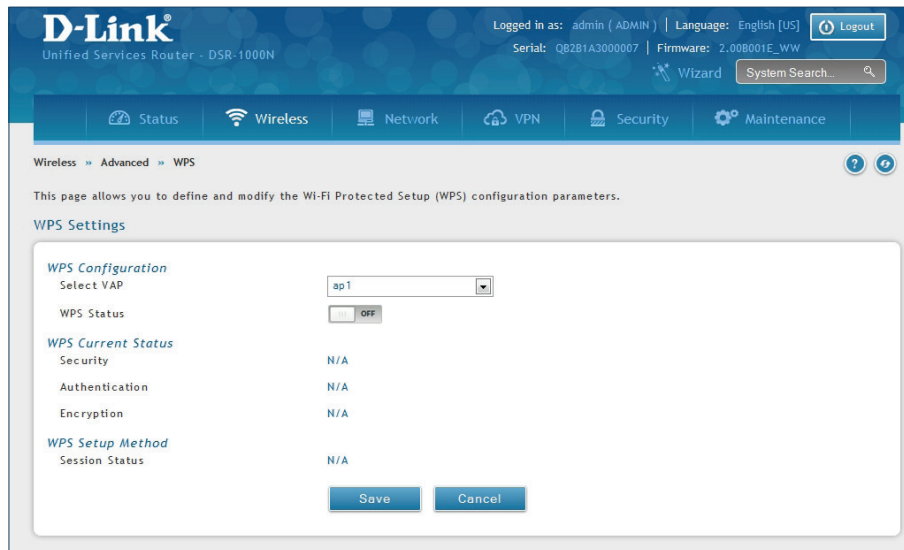

4. Once enabled the following screen will appear.
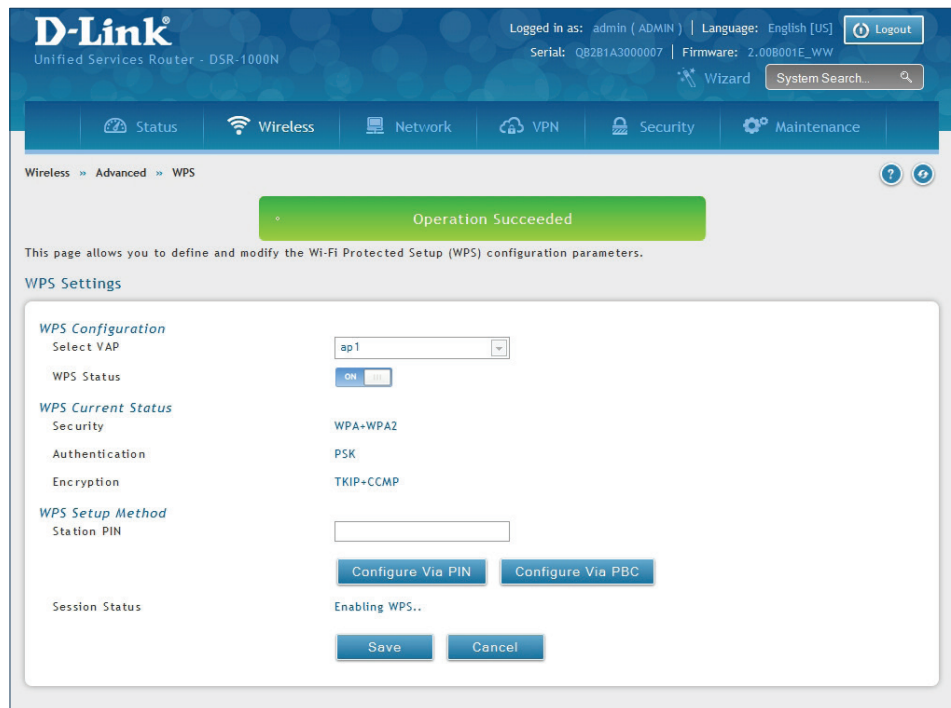

5. Under *WPS Setup Method*, decide to either use PIN or PBC (Push Button).

6. If you want to use PIN method, enter the PIN next to *Station PIN* and click **Configure Via PIN**. You will need to enter the PIN on your wireless client and start the WPS process within one minute.

7. If you want to use push button method, click **Configure Via PBC**. This will initiate the WPS session. You will need to press the WPS button (or initiate through an interface) on your client within one minute.

8. Allow up to two minutes to connect. Check the Session Status to see if it successfully connected.

VPN

A VPN provides a secure communication channel ("tunnel") between two gateway routers or a remote PC client. The following types of tunnels can be created:

- Gateway-to-gateway VPN: To connect two or more routers to secure traffic between remote sites.
- Remote Client (client-to-gateway VPN tunnel): A remote client initiates a VPN tunnel as the IP address of the remote PC client is not known in advance. The gateway in this case acts as a responder.
- Remote client behind a NAT router: The client has a dynamic IP address and is behind a NAT Router. The remote PC client at the NAT router initiates a VPN tunnel as the IP address of the remote NAT router is not known in advance. The gateway WAN port acts as responder.
- PPTP server for LAN / WAN PPTP client connections.
- L2TP server for LAN / WAN L2TP client connections.

IPSec VPN

Policies

Path: VPN > IPSec VPN > Policies

An IPsec policy is between this router and another gateway or this router and an IPsec client on a remote host. The IPsec mode can be either tunnel or transport depending on the network being traversed between the two policy endpoints.

- **Transport:** This is used for end-to-end communication between this router and the tunnel endpoint, either another IPsec gateway or an IPsec VPN client on a host. Only the data payload is encrypted and the IP header is not modified or encrypted.
- **Tunnel:** This mode is used for network-to-network IPsec tunnels where this gateway is one endpoint of the tunnel. In this mode the entire IP packet including the header is encrypted and/or authenticated.

When tunnel mode is selected, you can enable NetBIOS and DHCP over IPsec. DHCP over IPsec allows this router to serve IP leases to hosts on the remote LAN. As well in this mode you can define the single IP address, range of IPs, or subnet on both the local and remote private networks that can communicate over the tunnel.

To configure the radio settings:

1. Click **VPN** > **IPSec VPN** > **Policies**.

2. Click **Add new IPSec Policy**. Fill out the General section which you will name the VPN, select policy type, define the tunnel type, and define endpoints.

Field	Description
Policy Name	Enter a unique name for the VPN Policy. This name is not an identifier for the remote WAN/client.
Policy Type	Select either **Manual** or **Auto**. • Manual: All settings (including the keys) for the VPN tunnel are manually input for each end point. No third-party server or organization is involved. • Auto: Some parameters for the VPN tunnel are generated automatically. This requires using the IKE (Internet Key Exchange) protocol to perform negotiations between the two VPN Endpoints.
IP Protocol Version	Select either **IPv4** or **IPv6**.
IKE Version	Select the version of IKE.
IPSec Mode	Select either **Tunnel** or **Transport**. IPsec tunnel mode is useful for protecting traffic between different networks, when traffic must pass through an intermediate, untrusted network. Tunnel mode is primarily used for interoperability with gateways, or end-systems that do not support L2TP/IPsec or PPTP connections. Transport mode is the default mode for IPsec, and it is used for end-to-end communications (for example, for communications between a client and a server).
Select Local Gateway	In the event that two WAN ports are configured to connect to your ISP, select the gateway that will be used as the local endpoint for this IPsec tunnel.
Remote Endpoint	Select the type of identifier that you want to provide for the router at the remote endpoint (either **IP Address** or **FQDN** [Fully Qualified Domain Name])
IP Address/FQDN	Enter the identifier for the router.
Enable Mode Config	Toggle to **ON** to enable. Mode Config is similar to DHCP and is used to assign IP addresses to the remote VPN clients.
Enable NetBIOS	Toggle to **ON** to allow NetBIOS broadcasts to travel over the VPN tunnel
Enable RollOver	Toggle to **ON** to enable VPN rollover. You must have the WAN Mode set to Rollover.
Protocol	Select a protocol from the drop-down menu.
Enable DHCP	Toggle to **ON** to allow VPN clients that are connected to your router over IPsec to receive an assigned IP using DHCP.
Local IP/Remote IP	Select the type of identifier that you want to provide for the endpoint: • **Any:** Specifies that the policy is for traffic from the given end point (local or remote). Note that selecting Any for both local and remote end points is not valid. • **Single:** Limits the policy to one host. Enter the IP address of the host that will be part of the VPN. • **Range:** Allows computers within an IP address range to connect to the VPN. Enter the Start IP Address and End IP Address in the provided fields. • **Subnet:** Allows an entire subnet to connect to the VPN. Enter the network address and subnet mask in the provided fields.
Enable Keepalive	Toggle to **ON** to periodically send ping packets to the host on the peer side of the network to keep the tunnel alive.

3. Once the tunnel type and endpoints of the tunnel are defined you can determine the Phase 1/ Phase 2 negotiation to use for the tunnel. This is covered in the IPsec mode setting, as the policy can be Manual or Auto. For Auto policies, the Internet Key Exchange (IKE) protocol dynamically exchanges keys between two IPsec hosts. The Phase 1 IKE parameters are used to define the tunnel's security association details.

The Phase 2 Auto policy parameters cover the security association lifetime and encryption/authentication details of the phase 2 key negotiation.

The VPN policy is one half of the IKE/VPN policy pair required to establish an Auto IPsec VPN tunnel. The IP addresses of the machine or machines on the two VPN endpoints are configured here, along with the policy parameters required to secure the tunnel.

A Manual policy does not use IKE and instead relies on manual keying to exchange authentication parameters between the two IPsec hosts. The incoming and outgoing security parameter index (SPI) values must be mirrored on the remote tunnel endpoint. As well the encryption and integrity algorithms and keys must match on the remote IPsec host exactly in order for the tunnel to establish successfully. Note that using Auto policies with IKE are preferred as in some IPsec implementations the SPI (security parameter index) values require conversion at each endpoint.

DSR routers supports VPN roll-over feature. This means that policies configured on the primary WAN will rollover to the secondary WAN in case of a link failure. This feature can be used only if your WAN is configured in Auto-Rollover mode.

Note: Once you have created an IPSec policy, you may right-click the policy and select Export to save as a file. You can then upload this to another DSR router or keep as a backup. To upload a saved policy, refer to "Easy VPN Setup" on page 102.

Tunnel Mode

Path: VPN > IPSec VPN > Tunnel Mode

When tunnel mode is selected, you can enable NetBIOS and DHCP over IPSec. DHCP over IPSec allows this router to serve IP leases to hosts on the remote LAN. You can also define a single IP address, a range of IPs, or a subnet on both the local and remote private networks that can communicate over the tunnel.

The router allows full tunnel and split tunnel support. Full tunnel mode just sends all traffic from the client across the VPN tunnel to the router. Split tunnel mode only sends traffic to the private LAN based on pre-specified client routes. These client routes give the client access to specific private networks, thereby allowing access control over specific LAN services.

1. Click **VPN** > **IPSec VPN** > **Tunnel Mode**.

2. Complete the fields in the table below and click **Save**.

Field	Description
Tunnel Mode	Select either **Full Tunnel** or **Split Tunnel**.
Start/End IP Address	Enter the starting and ending IP addresses.
Primary/Secondary DNS	Enter the primary and secondary DNS server addresses.
Primary/Secondary WINS	Enter the primary and secondary WINS server addresses.
Save	Click **Save** to save and activate your settings.

Split DNS Names

In a split DNS infrastructure, you create two zones for the same domain, one to be used by the internal network, the other used by the external network. Split DNS directs internal hosts to an internal domain name server for name resolution and external hosts are directed to an external domain name server for name resolution.

To add a DNS name:

1. Click **VPN** > **IPSec VPN** > **Tunnel Mode** > **Split DNS Names** tab.
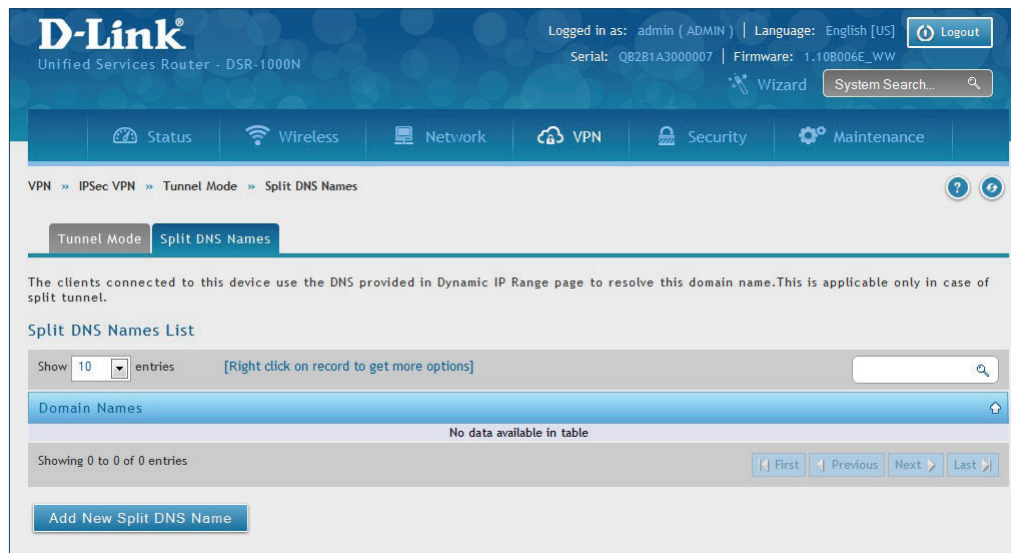

2. Click **Add New Split DNS name**. You can right-click any created entries to edit or delete.
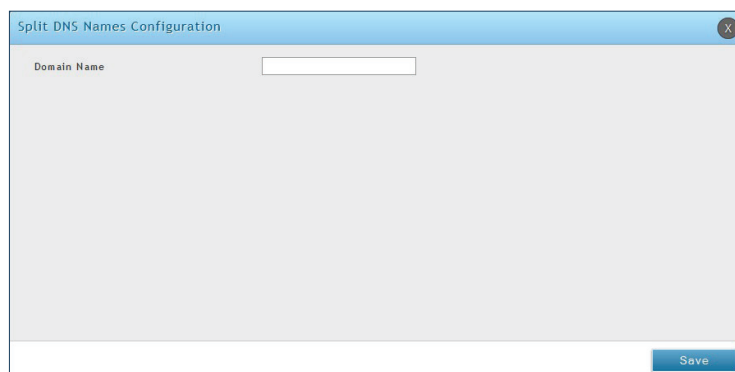

3. Enter a domain name and click **Save**.

DHCP Range

This page displays the IP range to be assigned to clients connecting using DHCP over IPsec. By default the range is in 192.168.12.0 subnet.

To configure the *DHCP over IPSec* DHCP server settings:
1. Click **VPN** > **IPSec VPN** > **DHCP Range**.

2. Complete the fields in the table below and click **Save**.

Field	Description
Starting IP Address	Enter the starting IP address to issue your clients connecting using DHCP over IPSec.
Ending IP Address	Enter the ending IP address.
Subnet Mask	Enter the subnet mask.
Save	Click **Save** to save and activate your settings.

Certificates

This router uses digital certificates for IPsec VPN authentication. You can obtain a digital certificate from a well-known Certificate Authority (CA) such as VeriSign, or generate and sign your own certificate using functionality available on this gateway.

The router comes with a self-signed certificate, and this can be replaced by one signed by a CA as per your networking requirements. A CA certificate provides strong assurance of the server's identity and is a requirement for most corporate network VPN solutions.

Trusted Certificates

The certificates menu allows you to view a list of certificates (both from a CA and self-signed) currently loaded on the router. The following certificate data is displayed in the list of Trusted (CA) certificates:

CA Identity (Subject Name): The certificate is issued to this person or organization

Issuer Name: This is the CA name that issued this certificate

Expiry Time: The date after which this Trusted certificate becomes invalid

To upload a certificate:

1. Click **VPN** > **IPSec VPN** > **Certificate** > **Trusted Certificates** tab.
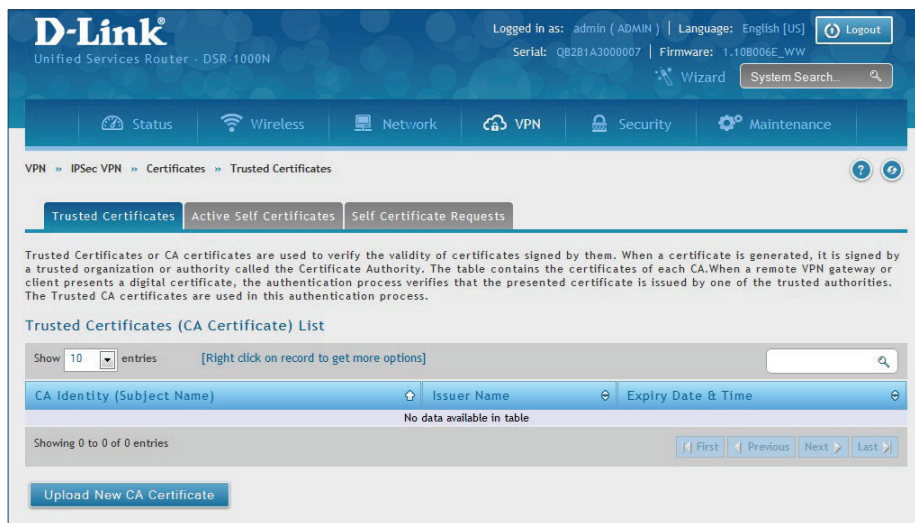

2. Click the **Browse** button. Locate your certificate and click **Open**.
3. Click **Upload**.
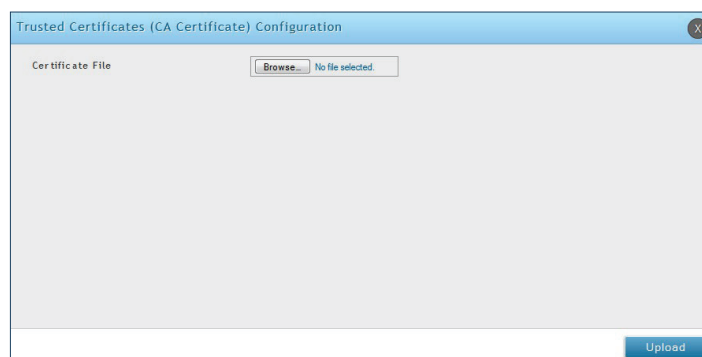

Active Self Certificates

A self certificate is a certificate issued by a CA identifying your device (or self-signed if you don't want the identity protection of a CA). The Active Self Certificate table lists the self certificates currently loaded on the router. The following information is displayed for each uploaded self certificate:

Name: The name you use to identify this certificate, it is not displayed to IPsec VPN peers.

Subject Name: This is the name that will be displayed as the owner of this certificate. This should be your official registered or company name, as IPsec or SSL VPN peers are shown this field.

Serial Number: The serial number is maintained by the CA and used to identify this signed certificate.

Issuer Name: This is the CA name that issued (signed) this certificate

Expiry Time: The date after which this signed certificate becomes invalid. You should renew the certificate before it expires.

To upload a certificate:

1. Click **VPN** > **IPSec VPN** > **Certificate** > **Active Self Certificates** tab.
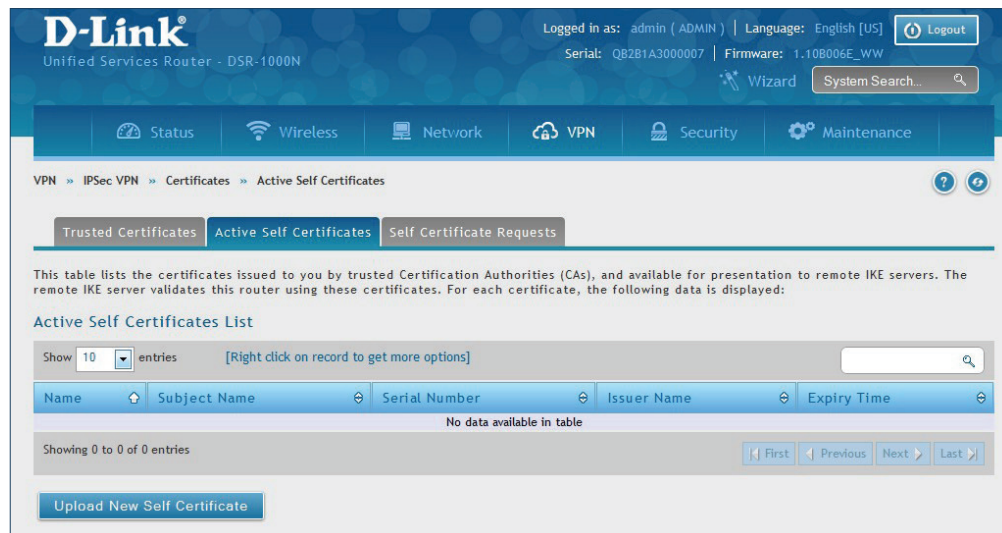

2. Click the **Browse** button. Locate your certificate and click **Open**.
3. Click **Upload**.
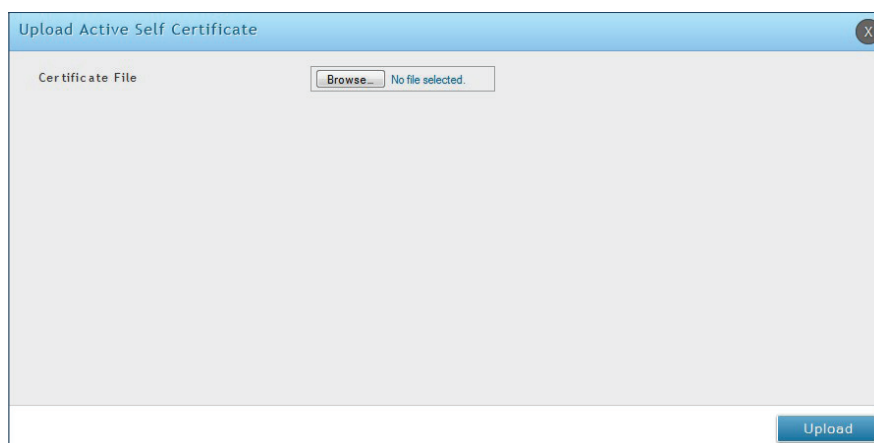

Self Certificate Requests

To request a self certificate to be signed by a CA, you can generate a Certificate Signing Request from the router by entering identification parameters and passing it along to the CA for signing. Once signed, the CA's Trusted Certificate and signed certificate from the CA are uploaded to activate the self -certificate validating the identity of this gateway. The self certificate is then used in IPsec and SSL connections with peers to validate the gateway's authenticity.

To generate a certificate signing request:

1. Click **VPN** > **IPSec VPN** > **Certificates** > **Self Certificate Requests**.
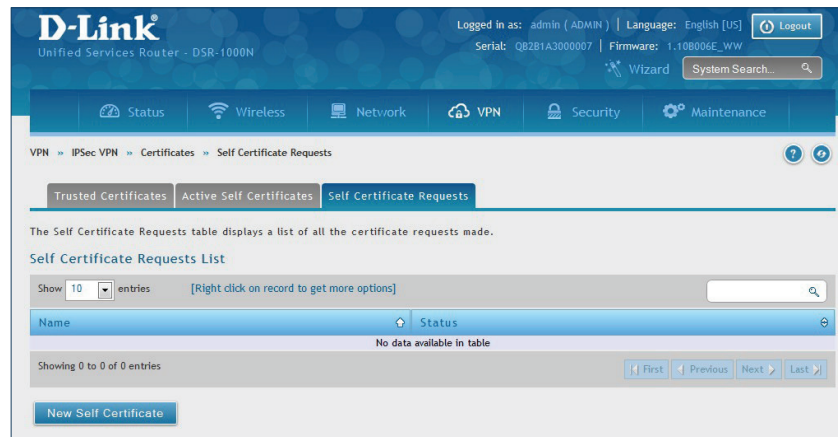

2. Click **New Self Certificate**.
3. Complete the fields in the table below and click **Save**.

Field	Description
Name	Enter a name (identifier) for the certificate.
Subject	This field will populate the CN (Common Name) entry of the generated certificate. Subject names are usually defined in the following format: CN=<device name>, OU=<department>, O=<organization>, L=<city>, ST=<state>, C=<country>. For example: CN=router1, OU=my_company, O=mydept, L=SFO, C=US.
Hash Algorithm	Select the algorithm from the drop-down menu. Select either **MD5** or **SHA-1**.
Signature Key Length	Select the signature key length from the drop-down menu. Select either **512**, **1024**, or **2048**
Application Type	Select the application type from the drop-down menu. Select either **HTTPS** or **IPSec**.
IP Address	Enter an IP address (optional).
Domain Name	Enter a domain name (optional).
Email Address	Enter your email address.
Save	Click **Save** to save and activate your settings.

Easy VPN Setup

To upload an exported IPSec VPN policy:

1. Click **VPN** > **IPSec VPN** > **Easy VPN Setup**.
2. Click **Browse** and navigate to the policy file you want to upload. Select it and click **Open**.
3. Click Upload.
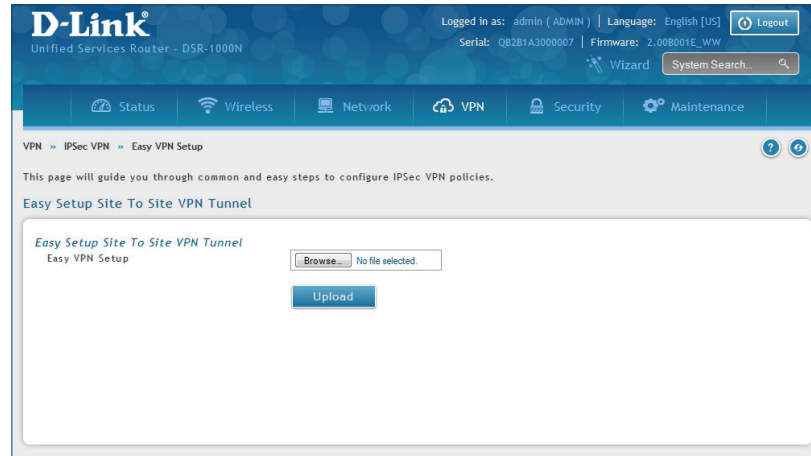

4. Once uploaded, go to **VPN** > **IPSec VPN** > **Policies** and the loaded VPN will be listed. Right-click it to edit or delete.

PPTP VPN
Server

Path: VPN > PPTP VPN > Server

A PPTP VPN can be established through this router. Once enabled a PPTP server is available on the router for LAN and WAN PPTP client users to access. Once the PPTP server is enabled, PPTP clients that are within the range of configured IP addresses of allowed clients can reach the router's PPTP server. Once authenticated by the PPTP server (the tunnel endpoint), PPTP clients have access to the network managed by the router.

The range of IP addresses allocated to PPTP clients can coincide with the LAN subnet. As well the PPTP server will default to local PPTP user authentication, but can be configured to employ an external authentication server should one be configured.

To create a PPTP VPN server:
1. Click **VPN** > **PPTP VPN** > **Server**.
2. Complete the fields in the table below and click **Save**.

Field	Description
Enable PPTP Server	Select either **IPv4** or **IPv6**.
PPTP Routing Mode	Select either **NAT** or **Classical**.
Starting/Ending IP Address	Enter the IP address range to assign your PPTP clients.
IPv6 Prefix	If you selected IPv6, enter the IPv6 prefix.
IPv6 Prefix Length	If you selected IPv6, enter the IPv6 prefix length.
Authentication	Select the authentication type from the drop-down menu.
Authentication Supported	Toggle which type of authentication you want to enable to **ON**.
Idle TimeOut	Enter the amount of time in seconds that the connection will disconnect when idle.
NetBIOS	Toggle to **ON** to allow NetBIOS broadcasts to travel over the VPN tunnel.
Save	Click to save your settings.

Client

Path: VPN > PPTP VPN > Client

PPTP VPN Client can be configured on this router. Using this client you can access remote network which is local to PPTP server. Once client is enabled, the user can access Status > Active VPNs page and establish PPTP VPN tunnel clicking Connect.

To configure the router as a PPTP VPN client:
1. Click **VPN** > **PPTP VPN** > **Client** tab.
2. Toggle *Client* to **ON** and complete the fields in the table below.

Field	Description
Client	Toggle to **ON** to enable PPTP client.
Server IP	Enter the IP address of the PPTP server you want to connect to.
Remote Network	Enter the remote network address. This address is local for the PPTP Server.
Remote Netmask	Enter the remote network subnet mask.
Username	Enter your PPTP user name.
Password	Enter your PPTP password.
MPPE Encryption	Toggle to ON to enable Microsoft Point-to-Point Encryption (MPPE).
Idle Time Out	Enter the amount of time (in seconds) that you will disconnect from the PPTP server when idle.
Save	Click **Save** to save and activate your settings.
Auto Dial	Toggle to On to enable Auto Dial
Time	Reconnect time

PPTP Active Users List

A list of PPTP connections will be displayed on this page. Right-click the connection to connect and disconnect.
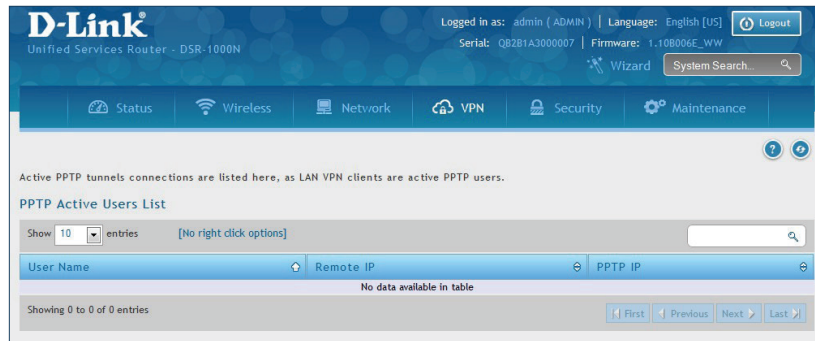

L2TP VPN
Server

Path: VPN > L2TP VPN > Server

A L2TP VPN can be established through this router. Once enabled a L2TP server is available on the router for LAN and WAN L2TP client users to access. Once the L2TP server is enabled, PPTP clients that are within the range of configured IP addresses of allowed clients can reach the router's L2TP server. Once authenticated by the L2TP server (the tunnel endpoint), L2TP clients have access to the network managed by the router.

The range of IP addresses allocated to L2TP clients can coincide with the LAN subnet. As well the L2TP server will default to local L2TP user authentication, but can be configured to employ an external authentication server should one be configured.

To create a L2TP VPN server:
1. Click **VPN** >**L2TP VPN** > **Server**.
2. Complete the fields in the table below and click **Save**.

Field	Description
Enable L2TP Server	Select either **IPv4** or **IPv6**.
L2TP Routing Mode	Select either **NAT** or **Classical**.
Starting/Ending IP Address	Enter the IP address range to assign your L2TP clients.
IPv6 Prefix	If you selected IPv6, enter the IPv6 prefix.
IPv6 Prefix Length	If you selected IPv6, enter the IPv6 prefix length.
Authentication	Select the authentication type from the drop-down menu.
Authentication Supported	Toggle which type of authentication you want to enable to **ON**.
Idle TimeOut	Enter the amount of time in seconds that the connection will disconnect when idle.
NetBIOS	Toggle to **ON** to allow NetBIOS broadcasts to travel over the VPN tunnel.
Save	Click to save your settings.

Client

L2TP VPN Client can be configured on this router. Using this client we can access remote network which is local to L2TP server. Once client is enabled, the user can access Status > Active VPNs page and establish L2TP VPN tunnel clicking Connect.

To configure the router as a L2TP VPN client:

1. Click **VPN** > **L2TP VPN** > **Client** tab.
2. Toggle *Client* to **ON** and complete the fields in the table below.

Field	Description
Client	Toggle to **ON** to enable L2TP client.
Server IP	Enter the IP address of the L2TP server you want to connect to.
Remote Network	Enter the remote network address. This address is local for the L2TP Server.
Remote Netmask	Enter the remote network subnet mask.
Username	Enter your L2TP user name.
Password	Enter your L2TP password.
Reconnect Mode	Select **Always On** or **On Demand**.
MPPE Encryption	Toggle to **ON** to enable Microsoft Point-to-Point Encryption (MPPE).
Save	Click **Save** to save and activate your settings.
Auto Dial	Toggle to On to enable Auto Dial
Time	Reconnect time

L2TP Active Users List

A list of L2TP connections will be displayed on this page. Right-click the connection to connect and disconnect.
SSL VPN
Server Policies

SSL VPN Policies can be created on a Global, Group, or User level. User level policies take precedence over Group level policies and Group level policies take precedence over Global policies. These policies can be applied to a specific network resource, IP address, or IP ranges on the LAN, or to different SSL VPN services supported by the router. The *List of Available Policies* can be filtered based on whether it applies to a user, group, or all users (global).

To add a SSL VPN policy, you must first assign it to a user, group, or make it global (i.e., applicable to all SSL VPN users). If the policy is for a group, the available configured groups are shown in a drop-down menu and one must be selected. Similarly, for a user-defined policy, a SSL VPN user must be chosen from the available list of configured users.

The next step is to define the policy details. The policy name is a unique identifier for this rule. The policy can be assigned to a specific Network Resource (details follow in the subsequent section), IP address, IP network, or all devices on the LAN of the router. Based on the selection of one of these four options, the appropriate configuration fields are required (i.e., choosing the network resources from a list of defined resources, or defining the IP addresses). For applying the policy to addresses the port range/port number can be defined.

The final steps require the policy permission to be set to either permit or deny access to the selected addresses or network resources. As well the policy can be specified for one or all of the supported SSL VPN services (i.e. VPN tunnel).

Once defined, the policy goes into effect immediately. The policy name, SSL service it applies to, destination (network resource or IP addresses), and permission (deny/permit) is outlined in a list of configured policies for the router.

Note: You must enable Remote Management. Refer to "Remote Management" on page 174.

To create a new SSL VPN policy:
1. Make sure you have enabled remote management and have created user(s) and group(s) to assign to this policy.
2. Click **VPN** > **SSL VPN** > **SSL VPN Server Policy**.
3. Click **Add New SSL VPN Server Policy**.

4. Complete the fields from the table below and click **Save**.

Network Resource

IP Address

Field	Description
Policy Type	Select **Global**, **Group**, or **User**.
Available Groups/Users	If you selected Group, select a group from the drop-down menu. If you selected User, select a user from the drop-down menu.
Apply Policy To	Select **Network Resource**, **IP Address**, **IP Network**, or **All Addresses**.
Policy Name	Enter a unique name for this policy.
IP Address	If you selected **IP Address** or **IP Network**, enter the IP address.
Mask Length	If you selected **IP Network**, enter the mask length (0-32).
ICMP	Toggle to **ON** to include ICMP traffic.
Begin/End	Enter a port range or leave blank to include all TCP and UDP ports. These fields are not available when selecting Network Resource.
Defined Resources	If you selected Network Resource, select the resource for the *Defined Resource* drop-down menu. If you have not created a resource, refer to "Resources" on page 113 to create a defined resource.
Service	Select either **VPN Tunnel**, **Port Forwarding**, or **All**. This field is not available when selecting Network Resource.
Permission	Select either **Permit** or **Deny**.
Save	Click to save your settings.

Portal Layouts

Path: VPN > SSL VPN > Portal Layouts

You may create a custom page for remote VPN users that is viewed during authentication. You may include login instructions, services, and other details. Note that the default portal LAN IP address is https://192.168.10.1/scgi-bin/userPortal/portal. This is the same page that opens when the "User Portal" link is clicked on the SSL VPN menu of the router web UI.

To create a new portal layout:
1. Click **VPN** > **SSL VPN** > **Portal Layouts**.
2. Click **Add New SSL VPN Portal Layout**.

Note: *You may right-click a layout from the list and edit or delete a layout.*

3. Complete the fields from the table on the next page and click **Save**.

Field	Description
Portal Layout Name	Enter a name for this portal. This name will be used as part of the path for the SSL portal URL. Only alphanumeric characters are allowed for this field.
Login Profile View	Select a login profile from the drop-down menu.
Portal Site Title	Enter the portal web browser window title that appears when the client accesses this portal. This field is optional.
Banner Title	The banner title that is displayed to SSL VPN clients prior to login. This field is optional.
Banner Message	Enter a message you want to display.
Display Banner Message on Login Page	Toggle to **ON** to display the banner title and message or **OFF** to hide the banner title and message.
HTTP Meta Tags for Cache Control	Toggle to **ON** or **OFF**. This security feature prevents expired web pages and data from being stored in the client's web browser cache. It is recommended to toggle to ON.
Active X Web Cache Cleaner	Toggle to **ON** or **Off**. An ActiveX cache control web cleaner can be pushed from the gateway to the client browser whenever users login to this SSL VPN portal.
Authentication Type	Select the type of authentication from the drop-down menu.
Group	Select what group to include from the drop-down menu.
VPN Tunnel Page	Toggle to **ON** to allow remote users to view this page.
Port Forwarding	Toggle to **ON** to allow remote users to view this page.
Save	Click to save your settings.

Resources

Path: VPN > SSL VPN > Resources

Network resources are services or groups of LAN IP addresses that are used to easily create and configure SSL VPN policies. This shortcut saves time when creating similar policies for multiple remote SSL VPN users.

Adding a Network Resource involves creating a unique name to identify the resource and assigning it to one or all of the supported SSL services. Once this is done, editing one of the created network resources allows you to configure the object type (either IP address or IP range) associated with the service. The Network Address, Mask Length, and Port Range/Port Number can all be defined for this resource as required.

Add New Resource

To add a new resource:
1. Click **VPN** > **SSL VPN** > **Resources**.
2. Click **Add New Resource**.

3. Complete the fields from the table on the next page and click **Save**.

Field	Description
Resource Name	Enter a unique name for this resource.
Service	Select **VPN Tunnel**, **Port Forwarding**, or **All**.
ICMP	Toggle to **ON** to include ICMP traffic.
Object Type	Select **Single IP Address** or **IP Network**.
Object Address	Enter the IP address.
Mask Length	If you selected IP Network, enter the mask length (0-32).
Begin/End	Enter a port range for the object.
Save	Click to save your settings.
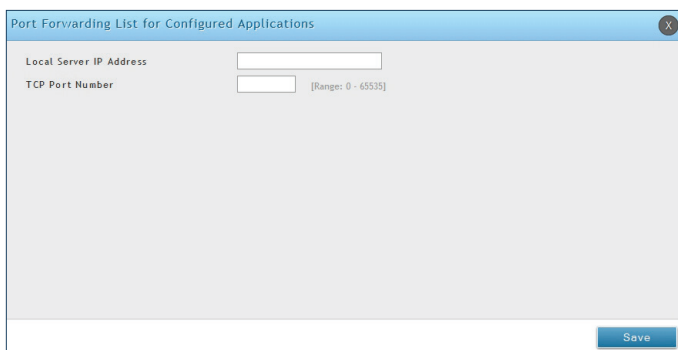

Port Forwarding

Port forwarding allows remote SSL users to access specified network applications or services after they login to the User Portal and launch the Port Forwarding service. Traffic from the remote user to the router is detected and re-routed based on configured port forwarding rules.
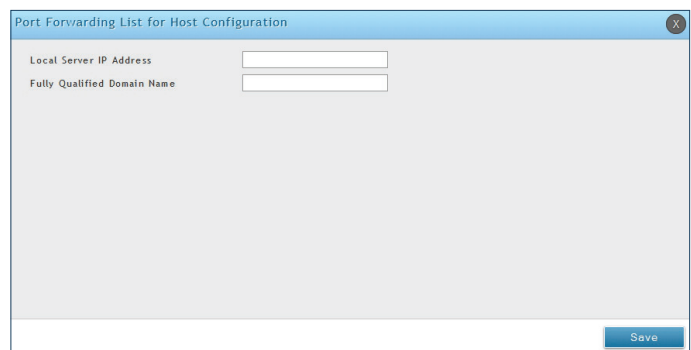

Internal host servers or TCP applications must be specified as being made accessible to remote users. Allowing access to a LAN server requires entering the local server IP address and TCP port number of the application to be tunnelled.

To add a port forwarding rule:
1. Click **VPN** > **SSL VPN** > **Resources**.
2. Click **Add New Rule** under either *Port Forwarding List for Configured Applications* (TCP Port) or under *Port Forwarding List for Configured Host Names* (FQDN).
3. Enter the IP address of the local server.
4. Next enter either the TCP port number or the domain name (FQDN).
5. Click **Save**.

Client

Path: VPN > SSL VPN > SSL VPN Client

An SSL VPN tunnel client provides a point-to-point connection between the browser-side machine and this router. When a SSL VPN client is launched from the user portal, a "network adapter" with an IP address from the corporate subnet, DNS and WINS settings is automatically created. This allows local applications to access services on the private network without any special network configuration on the remote SSL VPN client machine.

It is important to ensure that the virtual (PPP) interface address of the VPN tunnel client does not conflict with physical devices on the LAN. The IP address range for the SSL VPN virtual network adapter should be either in a different subnet or non-overlapping range as the corporate LAN.

The router allows full tunnel and split tunnel support. Full tunnel mode just sends all traffic from the client across the VPN tunnel to the router. Split tunnel mode only sends traffic to the private LAN based on pre-specified client routes. These client routes give the SSL client access to specific private networks, thereby allowing access control over specific LAN services.

To configure client mode:
1. Click **VPN** > **SSL VPN** > **SSL VPN Client**.

2. Toggle *Full Tunnel Support* to **ON** to support full tunnel or **OFF** to enable split tunnel.
3. Enter a DNS suffix to assign to this client (optional).
3. Enter a primary and secondary DNS server addresses (optional).
4. Enter the range of IP addresses clients will be assigned (DHCP).
5. Next to *LCP Timeout*, set the value for LCP echo interval (in seconds).
6. Click **Save**.

Client Routes

Path: VPN > SSL VPN > SSL VPN Client

If the SSL VPN client is assigned an IP address in a different subnet than the corporate network, a client route must be added to allow access to the private LAN through the VPN tunnel. As well a static route on the private LAN's firewall (typically this router) is needed to forward private traffic through the VPN Firewall to the remote SSL VPN client.

When split tunnel mode is enabled, the user is required to configure routes for VPN tunnel clients:
- Destination network: The network address of the LAN or the subnet information of the destination network from the VPN tunnel clients' perspective is set here.
- Subnet mask: The subnet information of the destination network is set here.

To configure a client route:
1. Click **VPN** > **SSL VPN** > **Client Routes**.
2. Click **Add New Client Route**.
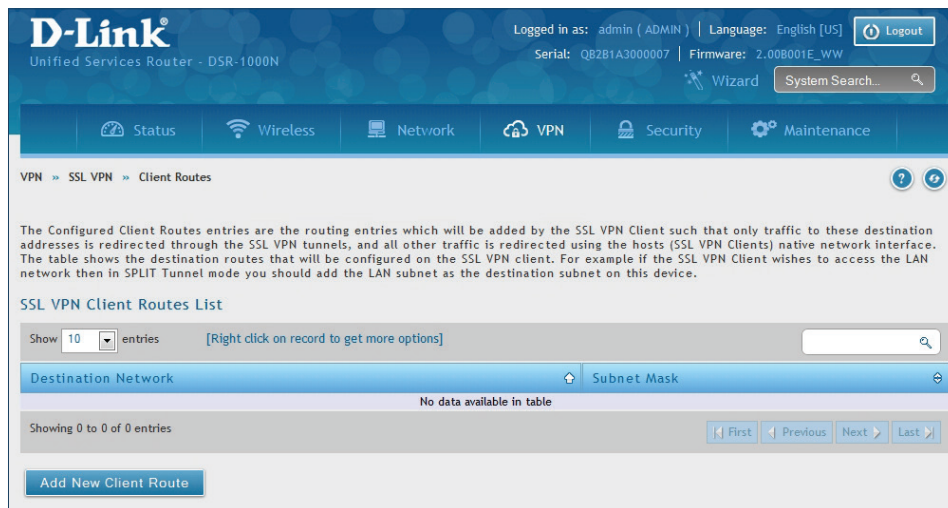

3. Enter the destination network and subnet mask.
4. Click **Save**.

Open VPN
Settings

VPN > OpenVPN > Settings

OpenVPN allows peers to authenticate each other using a pre-shared secret key, certificates, or username/password. When used in a multiclient-server configuration, it allows the server to release an authentication certificate for every client, using signature and Certificate authority. An OpenVPN can be established through this router.

You can select server mode, client mode, or access server client mode. In access server client mode, the user has to download the auto login profile from the OpenVPN Access Server and upload the same to connect.

Server

To configure the router as an OpenVPN Server:
1. Click **VPN** > **OpenVPN** > **Settings**.
2. Toggle *OpenVPN* to **ON** and complete the fields in the table below.

Field	Description
Mode	Select **Server**.
VPN Network	Enter the IP network for the VPN.
Duplicate CN	Toggle On to allow a same certification for multiple clients.
VPN Netmask	Enter the netmask.
Port	Enter what port to use. The default port is 1194.
Tunnel Protocol	Select either **TCP** or **UDP**.
Encryption Algorithm	Select the encryption algorithm from the drop-down menu.
Hash Algorithm	Select the hash algorithm from the drop-down menu.

Tunnel Type	Select either **Full Tunnel** or **Split Tunnel**. Full Tunnel mode just sends all traffic from the client across the VPN tunnel to the router. Split Tunnel mode only sends traffic to the private LAN based on pre-specified client routes. If you select Split Tunnel, refer to "Local Networks" on page 122 to create local networks.
Save	Click **Save** to save and activate your settings.

Client

To configure the router as an OpenVPN client:

1. Click **VPN** > **OpenVPN** > **Settings**.

2. Toggle *OpenVPN* to **ON** and complete the fields in the table below.
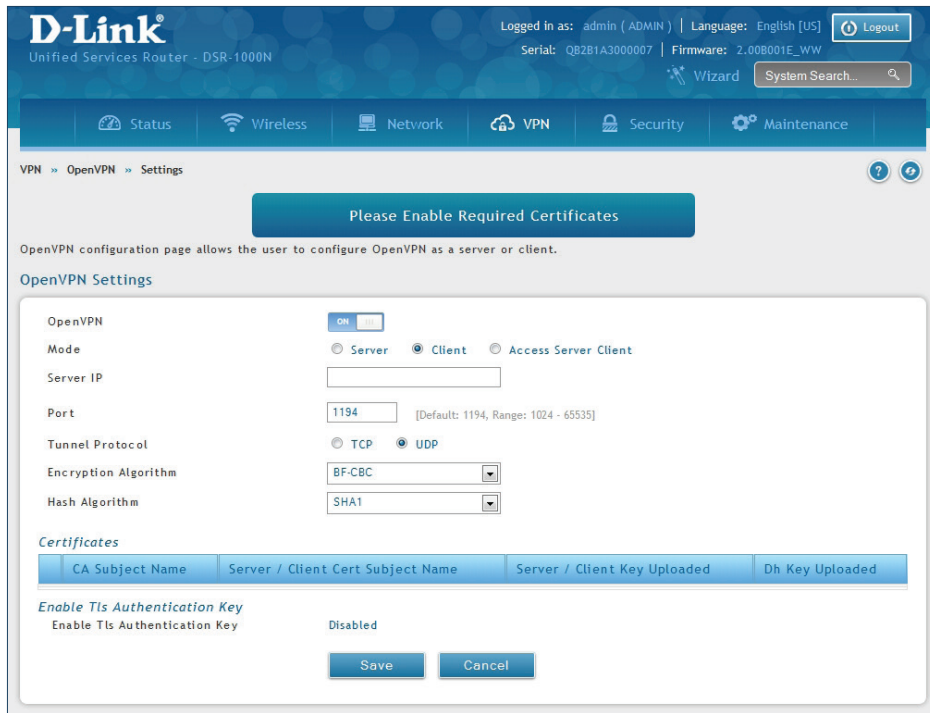

Field	Description
Mode	Select **Client**.
Server IP	Enter the IP address of the OpenVPN server.
Port	Enter what port to use. The default port is 1194.
Tunnel Protocol	Select either **TCP** or **UDP**.
Encryption Algorithm	Select the encryption algorithm from the drop-down menu.
Hash Algorithm	Select the hash algorithm from the drop-down menu.
Save	Click **Save** to save and activate your settings.

Access Server Client

To configure the router as an OpenVPN access server client:

1. Click **VPN** > **OpenVPN** > **Settings**.
2. Toggle *OpenVPN* to **ON** and complete the fields in the table below.

Field	Description
Mode	Select **Access Server Client**.
Port	Enter what port to use. The default port is 1194.
Upload Status	Displays if a configuration file has been uploaded.
File	Click **Browse** and locate the configuration file. Click **Open** and then click **Upload**.
Save	Click **Save** to save and activate your settings.

OmniSSL Configuration

The router provides OmniSSL feature as an alternate to the SSL VPN connectivity while supporting most of the SSL VPN features. OmniSSL support facilitates the client installation from the device via portal page and is an enhancement to the existing OpenVPN. Additionally, this VPN tool can be used via mobile devices, thereby, eliminating browser and Java dependencies typical to SSL VPN solutions including that offered in the DSR

VPN > Open VPN > OmniSSL Configuration
The OmniSSL Configuration page allows the user to generate client's configuration. OmniSSL is an adaptable feature as it supports and can get installed on various operating systems following their respective procedures (for more details, please refer: Application Note on OmniSSL Client Portal).

    1. Click VPN > OpenVPN > OmniSSL Server Policy
    2. Click Add NewOmniSSL Server policy

Field	Description
Policy Type	Select this option to add a policy applicable to all the users or particular of the device
Apply Policy To	Select accessible IP address or IP network
Policy Name	Enter a unique name used to identify the policy.
ICMP	Toggle On to support ICMP traffic.
IP Address/Network	Configure accessible IP address or IP network
Mask Length	Subnet mask for the above IP address.
Begin and End	A range of port numbers to apply
Permission	Select Permit or Deny for the respective policy.

Local Networks

If you selected Split Tunnel (from OpenVPN Server), you can create a local network by following the steps below:

1. Click **VPN** > **OpenVPN** > **Local Networks**.
2. Click **Add New OpenVPN Local Network**.
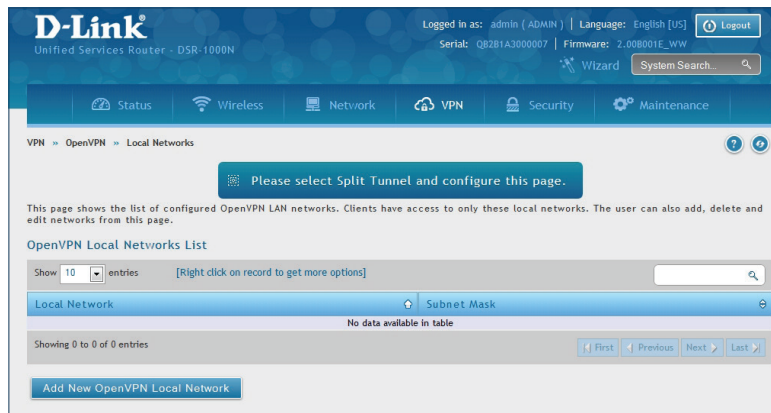

3. Enter a local IP network.
4. Enter the subnet mask.
5. Click **Save**.
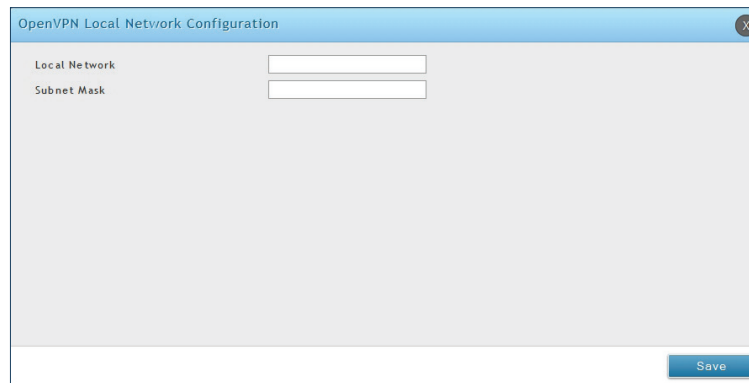

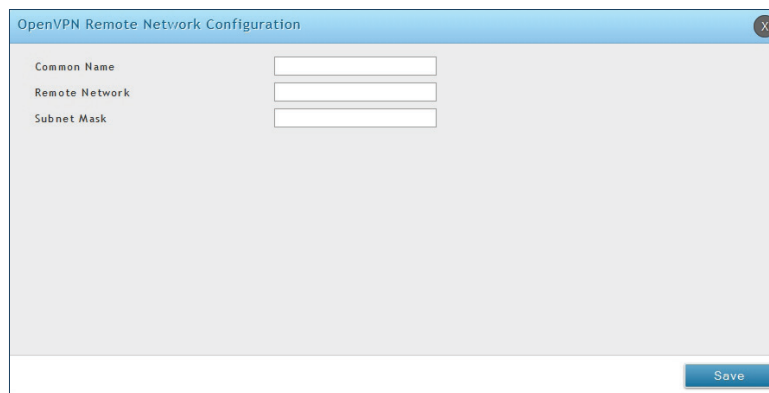

Remote Networks

To create remote networks:

    1. Click **VPN** > **OpenVPN** > **Remote Networks**.

    2. Click **Add New OpenVPN Remote Network**.
    3. Enter a name of the remote network.

    4. Enter a local IP network.

    5. Enter the subnet mask.

    6. Click **Save**.

Authentication

This page will allow you to upload certificates and keys. Click **Browse** and select the file you want to upload. Click **Open** and then click **Upload**.

GRE

VPN > VPN Settings > GRE

GRE tunnels allow for broadcast traffic on the LAN of the router to be passed over the internet and received by remote LAN hosts. This is primarily useful in the D-Link Discovery Protocol (DDP) application where broadcast traffic from one LAN host is to be received by all LAN hosts in the local subnets of the GRE endpoints.

Note the following limits for the number of supported GRE tunnels per product:
- DSR-150/150N: 5
- DSR-250/250N: 10
- DSR-500/500N/500AC: 15
- DSR-1000/1000N/1000AC: 20

There are two simple steps involved in establishing a GRE tunnel on the router:
1. Create a GRE tunnel from the GUI
2. Setup a static route for the remote local networks using the GRE tunnel

When creating the GRE tunnel, the IP Address should be a unique address that identifies that GRE tunnel endpoint. It will be referenced in the other router's static route as the Gateway IP address. The Remote End Address in the GRE tunnel configuration page is the WAN IP address of the other endpoint router.

Once the tunnel is established, a static route on the router can be made using the interface set to the configured GRE tunnel name. The destination IP address of the static route is the remote LAN subnet, and the route's gateway IP address will be the GRE tunnel IP of the terminating router (the same router that manages the remote LAN subnet). Once these two steps are completed, all DDP broadcast traffic can flow between remote LAN subnets via the GRE Tunnel.

To create a GRE tunnel:
1. Click **VPN** > **GRE** > **GRE Tunnels**.
2. Click **Add New GRE Tunnel**.
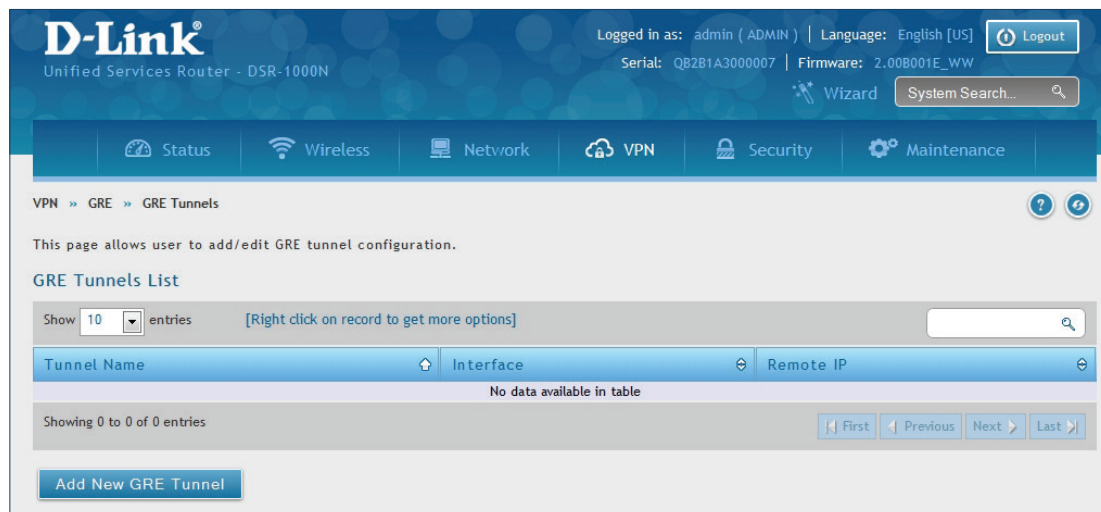

3. Complete the fields in the table below and then click **Save**.

Field	Description
GRE Tunnel Name	Enter a name for the tunnel.
IP Address	Enter the IP address of this endpoint. It will be referenced in the other router's static route as the Gateway IP address.
Subnet Mask	Enter the subnet mask.
Interface	Select the interface to create this tunnel with from the drop-down menu.
Remote End Address	Enter the WAN IP address of the endpoint router.
Enable DDP Broadcast	Toggle to **ON** to enable DDP broadcasting.
IP Address	Enter the destination IP address of the static route from the remote LAN subnet.
Subnet Mask	Enter the subnet mask.
Gateway IP Address	Enter the IP address of the termination router.
Save	Click **Save** to save and activate your settings.

Security
Groups

Path: Security > Authentication > User Database > Groups

The group page allows creating, editing, and deleting groups. The groups are associated to set of user types.

To edit/delete an existing group, or add a new group:

1. Click **Security** > **Authentication** > **User Database** > **Groups** tab.
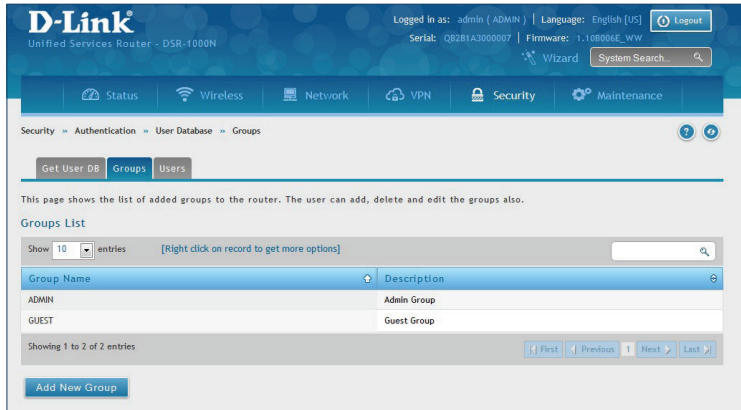

2. Right-click a group entry and select either **Edit** or **Delete**. To add a new group, click **Add New Group**.
3. Complete the fields in the table below and click **Save**.

Admin User Type   Network User Type

Field	Description
Group Name	Enter a name for the group.
Description	Enter a description for the group.
User Type	Select the user type: • Admin - Grants all users in this group super-user privileges. By default, there is one admin user. • Network - Grants the next level of privileges. • Front Desk - Grants permissions to create temporary users who can Internet/network access (Hotspot). • Guest - Guest users will only have read access. Network and Admin users can toggle **ON** PPTP, L2TP, Xauth (Network only), SSLVPN, and Captive Portal.
Idle Timeout	Enter the number of minutes of inactivity that must occur before the users in this user group are logged out of their web management session automatically. Entering an Idle Timeout value of 0 (zero) means never log out.
Save	Click **Save** at the bottom to save and activate your settings.

Login Policies

Path: Security > Authentication > Internal User Database > Groups

Using the following procedure, you can grant or deny a user group login access to the web management interface.

1. Click **Security** > **Authentication** > **Internal User Database** > **Groups** tab.
2. Click **Add Login Policies**.

3. Complete the fields from the table below and click **Save**.

Field	Description
Group Name	Select the group you want to configure.
Disable Login	Toggle **ON** to deny login access to the web management interface for all users in this user group. Toggle **OFF** will allow users to log in.
Deny Login from Option Interface	Toggle **ON** to deny login access to the web management interface from the WAN2/DMZ Port for all users in this user group. Toggle **OFF** will allow users.
Save	Click **Save** at the bottom to save and activate your settings.

Browser Policies

Path: Security > Authentication > Internal User Database > Groups

Use this feature to allow or deny users in a selected group from using a particular web browser to log in to the router's web management interface.

1. Click **Security** > **Authentication** > **Internal User Database** > **Groups** tab.
2. Click **Add Browser Policies**.

3. Complete the fields from the table below and click **Save**.

Field	Description
Group Name	Select the group you want to configure from the drop-down menu.
Client Browser	Select a web browser from the drop-down menu.
Save	Click **Save** at the bottom to save and activate your settings.

4. Your policy will now be in the browser policies list. By default the status will be set to deny. If you want to set the status to allow, right-click the policy and select **Allow**.

IP Policies

Path: Security > Authentication > Internal User Database > Groups

Use this feature to allow or deny users in a user group to log in to the router's web management interface from a particular network or IP address.

1. Click **Security** > **Authentication** > **Internal User Database** > **Groups** tab.

2. Click **Add IP Policies**.

3. Complete the fields from the table below and click **Save**.

Field	Description
Group Name	Select the group you want to configure from the drop-down menu.
Source Address Type	Select either **Network** to specify a IP network or **IP Address** to specify a specific IP address.
Network Address/IP Address	Enter the network address or IP address.
Mask Length	If you selected *Network*, enter the mask length.
Save	Click **Save** at the bottom to save and activate your settings.

Users
User Management

Path: Security > Authentication > Internal User Database > Users

After you add user groups, you can add users to the user groups. Users can be added individually, or they can be imported from a comma-separated-value (CSV) formatted file. After you add users, you can edit them when changes are required or delete users when you no longer need them.

To edit/delete existing users, or add a new user:
1. Click **Security** > **Authentication** > **Internal User Database** > **Users** tab.
2. Right-click a group entry and select either **Edit** or **Delete**. To add a new group, click **Add New User**.

3. Complete the fields from the table below and click **Save**.

Field	Description
User Name	Enter the user name for this user. This name is a unique identifier
First Name	Enter the user's first name.
Last Name	Enter the user's last name.
Select Group	Select the group you want to assign this user to from the drop-down menu.
Password	Enter a case-sensitive login password that the user must specify at the login prompt to access the web management interface. For security, each typed password character is masked with a dot (•).
Confirm Password	Enter the password to confirm.
Save	Click **Save** at the bottom to save and activate your settings.

Import User Database

Path: Security > Authentication > Internal User Database > Get User DB

The DSR administrator can add users to the local built-in database directly via an appropriately-formatted comma separated value (CSV) file. The advantage of this feature is to allow for a large number of users to be added to the system with one operation, and the same file can be uploaded to multiple DSR devices as needed. Once uploaded the specific users in the local user database can be modified via the GUI as needed.

To import a user database:

1. Click **Security** > **Authentication** > **Internal User Database** > **Get User DB** tab.
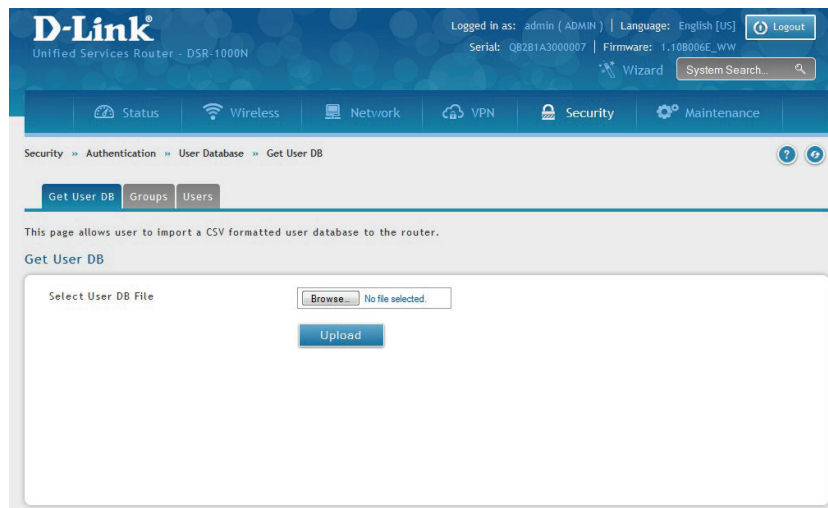

2. Click **Browse** and locate the file you want to upload. Select it and click **Open**.
3. Click **Upload**.
4. Once completed, go to **Security** > **Authentication** > **User Database** > **Users** and your imported users will be displayed in the Users List.
5. From the list you can right-click the user to edit or delete.

Create a User Database (CSV File)

The following parameters must be used to define the User database CSV file.

1. Create an empty text file with a .csv extension.

2. Each line in the file corresponds to a single user entry. Every line should end with carriage return equivalent of CRLF. Do not add comments or other text in this file.

3. Formatting rules:
   a) All the fields must be enclosed within double quotes.
   b) Consecutive fields are separated by commas.
   c) There should be no leading or trailing spaces in a line.
   d) There should be no spaces between fields.

   Each line in the CSV user database file should follow the following format:

   "UserName","FirstName","LastName","GroupName","Password","MultiLogin"

   The above sample has fields that can assume the following values:
   - Username (text field): Name of the user and identifier in the DSR's database, and so it must be unique in the local user database.
   - FirstName (text field): This is a user detail and need not be unique.
   - LastName (text field): This is a user detail and need not be unique.
   - GroupName (text field): The group that is associated with this user.
   - MultiLogSup (Boolean value): With this enabled ("1"), then multiple users can share a single username and password.
   - Password (text field): password to assign for this username
   - The Group for a corresponding user ("GroupName" in the CSV) must be created via the GUI in advance of the User Database CSV upload action.
   - None of the above fields can be left empty or NULL in the User Database CSV.

External Authentication Servers
RADIUS Server

Path: Security > Authentication > External Auth Server > RADIUS Server

A RADIUS server can be configured and accessible by the router to authenticate client connections.

To configure the router to connect to your RADIUS server:

1. Click **Security** > **Authentication** > **External Auth Server** > **RADIUS Server** tab.

2. Complete the RADIUS server information from the table below and click **Save**. You can configure up to three servers.

Field	Description
Authentication Server IP Address	Enter the IP address of your RADIUS server.
Authentication Port	Enter the RADIUS authentication server port.
Secret	Enter the secret key that allows the device to log into the configured RADIUS server. It must match the secret on RADIUS server.
Timeout	Set the amount of time in seconds that the router should wait for a response from the RADIUS server.
Retries	This determines the number of tries the controller will make to the RADIUS server before giving up.
Save	Click **Save** at the bottom to save and activate your settings.
Server Check	Click to test the connection(s) to your RADIUS Server(s).

POP3 Server

Path: Security > Authentication > External Auth Server > POP3 Server

POP3 is an application layer protocol most commonly used for e-mail over a TCP/IP connection. The authentication server can be used with SSL encryption over port 995 to send encrypted traffic to the POP3 server. The POP3 server's certificate is verified by a user-uploaded CA certificate. If SSL encryption is not used, port 110 will be used for the POP3 authentication traffic.

To configure the router to connect to your POP3 server:
1. Click **Security** > **Authentication** > **External Auth Server** > **POP3 Server** tab.

2. Complete the POP3 server information from the table below and click **Save**. You can configure up to three servers.

Field	Description
Authentication Server IP Address	Enter the IP address of your POP3 server.
Authentication Port	Enter the POP3 authentication server port.
SSL Enable	Toggle to **ON** to enable SSL support for POP3. If this option is enabled, it is mandatory to select a certificate authority for it.
CA File	Certificate Authority to verify POP3 server's certificate.
Timeout	Set the amount of time in seconds that the router should wait for a response from the POP3 server.
Retries	This determines the number of tries the controller will make to the POP3 server before giving up.
Save	Click **Save** at the bottom to save and activate your settings.
Server Check	Click to test the connection(s) to your POP3 Server(s).

POP3 Trusted Server

Path: Security > Authentication > External Auth Server > POP3 Trusted CA

A CA file is used as part of the POP3 negotiation to verify the configured authentication server identity. Each of the three configured servers can have a unique CA used for authentication.

To configure:

1. Click **Security** > **Authentication** > **External Auth Server** > **POP3 Trusted CA** tab.
2. Click **Add CA File**.
3. Click **Browse** and select a CA file. Click **Open** and then click **Upload**.

LDAP Server

Path: Security > Authentication > External Auth Server > LDAP Server

The LDAP authentication method uses LDAP to exchange authentication credentials between the router and an external server. The LDAP server maintains a large database of users in a directory structure, so users with the same user name but belonging to different groups can be authenticated since the user information is stored in a hierarchal manner. Also of note is that configuring a LDAP server on Windows or Linux servers is considerably less complex than setting up NT Domain or Active Directory servers for user authentication.

The details configured on the controller will be passed for authenticating the router and its hosts. The LDAP attributes, domain name (DN), and in some cases the administrator account & password are key fields in allowing the LDAP server to authenticate the controller.

To configure the router to connect to your LDAP server:

1. Click **Security** > **Authentication** > **External Auth Server** > **LDAP Server** tab.

2. Complete the LDAP server information from the table below and click **Save**. You can configure up to three servers.

Field	Description
Authentication Server (1-3)	Enter the IP address of your primary LDAP server.
LDAP Attribute (1-4)	These are attributes related to LDAP users configured in LDAP server. These may include attributes like SAM account name, associated domain name etc. These can be used to distinguish between different users having same user name.
LDAP Base DN	Enter the base domain name.
Timeout	Set the amount of time in seconds that the router should wait for a response from the LDAP server.
Retries	This determines the number of tries the controller will make to the LDAP server before giving up.
Save	Click **Save** at the bottom to save and activate your settings.
Administrator Account	Enter the admin account information that will be used when LDAP authentication is required for PPTP/L2TP connection.
Server Check	Click to test the connection(s) to your LDAP Server(s).

AD Server

Path: Security > Authentication > External Auth Server > AD Server

Active Directory authentication is an enhanced version of NT Domain authentication. The Kerberos protocol is leveraged for authentication of users, who are grouped in Organizational Units (OUs). In particular the Active Directory server can support more than a million users given is structure while the NT Domain server is limited to thousands. The configured Authentication Servers and Active Directory domain(s) are used to validate the user with the directory of users on the external Windows based server. This authentication option is common for SSL VPN client users and is also useful for IPsec / PPTP / L2TP client authentication.

To configure the router to connect to your AD server:

1. Click **Security** > **Authentication** > **External Auth Server** > **AD Server** tab.

2. Complete the AD server information from the table on the next page and click **Save**. You can configure up to three servers.

Field	Description
Authentication Server (1-3)	Enter the IP address of your AD server(s).
Active Directory Domain (1-3)	Enter the active directory domain name(s).
Timeout	Set the amount of time in seconds that the router should wait for a response from the AD server.
Retries	This determines the number of tries the controller will make to the AD server before giving up.
Administrator Account	Enter the admin account information that will be used when authentication is required for PPTP/L2TP connection.
Save	Click **Save** at the bottom to save and activate your settings.
Server Check	Click to test the connection(s) to your AD Server(s).

NT Domain Server

Path: Security > Authentication > External Auth Server > NT Domain

The NT Domain server allows users and hosts to authenticate themselves via a pre-configured Workgroup field. Typically Windows or Samba servers are used to manage the domain of authentication for the centralized directory of authorized users.

To configure the router to connect to your NT domain server:

1. Click **Security** > **Authentication** > **External Auth Server** > **NT Domain** tab.

2. Complete the NT server information from the table below and click **Save**. You can configure up to three servers.

Field	Description
Authentication Server (1-3)	Enter the IP address of your NT server(s).
Workgroup (1-3)	Enter the NT workgroup name(s).
Timeout	Set the amount of time in seconds that the router should wait for a response from the AD server.
Retries	This determines the number of tries the controller will make to the AD server before giving up.
Administrator Account	Enter the admin account information that will be used when authentication is required for PPTP/L2TP connection.
Save	Click **Save** at the bottom to save and activate your settings.
Server Check	Click to test the connection(s) to your AD Server(s).

Login Profiles

Path: Security > Authentication > Login Profiles

When a wireless client connects to the SSIDs or VLANs, the user sees a login page. The Login Profile and SLA page allows you to customize the appearance of that page with specific text and images. The wireless router supports multiple login and SLA pages. Associate login page or SLAs on SSIDs or VLANs separately.

To add, delete, or edit login profiles:

    1. Click **Security** > **Authentication** > **Login Profiles** tab.

    2. Right-click an entry and select either **Edit** or **Delete**. To add a new group, click **Add New Login Profile**.

    3. Complete the fields from the table on the next page and click **Save**.

Field	Description
General Details	
Profile Name	Enter a name for this captive portal profile. The name should allow you to differentiate this captive profile from others you may set up.
Browser Title	Enter the text that will appear in the title of the browser during the captive portal session.
Background	Select whether the login page displayed during the captive portal session will show an image or color. Choices are: • Image: Displays an image as the background on the page. Use the Page Background Image field to select a background image. • Color: Sets the background color on the page. Select the color from the drop-down menu
Page Background Image	If you set *Background* to **Image**, upload the image file by clicking **Add** > **Browse**. Select an image, click **Open** and then click the **Upload** button. The maximum size of the image is 100 kb.
Page Background Upload	Choose the file you want to upload.
Page Background Color	If you set *Background* to **Color**, select the background color of the page that will appear during the captive portal session from the drop-down menu.
Custom Color	If you choose Custom on Page Background Color, enter the HTML color code.
Minimal Page for Mobile Devices	Toggle to **ON** to allow the web page to be properly viewed from a mobile device.
Header Details	
Background	Select whether the login page displayed during the captive portal session will show an image or color. Choices are: • Image: Show image on the page. Use the Header Background Color field to select a background color. The maximum size of the image is 100 kb. • Color: Show background color on the page. Use the radio buttons to select an image.
Header Background Image	If you set *Background* to **Image**, upload the image file by clicking **Add** > **Browse**. Select an image, click **Open** and then click the **Upload** button. The maximum size of the image is 100 kb.
Header Background Upload	Choose the file you want to upload.
Header Background Color	If you set *Background* to **Color**, select the header color from the drop-down menu.
Custom Color	If you choose Custom on Page Background Color, you can choose particular color by filling in the HTML color code.
Header Caption	Enter the text that appears in the header of the login page during the captive portal session.
Caption Font	Select the font for the header text.
Font Size	Select the font size for the header text.
Font Color	Select the font color for the header text.
Login Details	
Login Section Title	Enter the text that appears in the title of the login box when the user logs in to the captive portal session. This field is optional.
Welcome Message	Enter the welcome message that appears when users log in to the captive session successfully. This field is optional.
Error Message	Enter the error message that appears when users fail to log in to the captive session successfully. This field is optional.
Footer Details	
Change Footer Content	Enables or disables changes to the footer content on the login page.
Footer Content	If Change Footer Content is checked, enter the text that appears in the footer.
Footer Font Color	If Change Footer Content is checked, select the color of the text that appears in the footer.

External Payment Gateway	
Enable External Payment Gateway	Enables or disables external payment gateway and online wireless service purchasing from on the login page.
Session Title 1	Enter the text that appears in the title of the online purchasing login box when the user logs in to the captive portal session.
Message	Enter the text appears in the online purchasing login box when the user logs in to the captive portal session.
Session Title 2	Enter the text that appears in the title of the message box while online purchasing is complete.
Success Message	Enter the text that appears in the message box while online purchasing is complete.
Session Title 3	Enter the text that appears in the title of the message box while online purchasing is fail.
Failure Message	Enter the text that appears in the message box while online purchasing is fail.
Enable Billing Profile	Select the billing profile which will be shown on the login page. The table only listed the billing profiles which are set Unit Price. Enable the billing profile by switch ON on STATUS.
Service Disclaimer Text	Enter the service disclaimer text which is shown before user select and purchase wireless service.
Payment Server	Select the payment received account and its payment agent.

Web Content Filtering
Static Filtering

Path: Security > Authentication > Static Filtering

You may block access to certain Internet services.

To block or allow a service:

    1. Click **Security** > **Web Content Filter** > **Static Filtering** tab.
    2. Toggle Content Filtering to **ON**.

    3. Toggle the service to **ON** to block. Toggle to **OFF** to allow.

    4. Click **Save**.

Approved URLs

Path: Security > Web Content Filter > Static Filtering > Approved URL

The approved URL list is an acceptance list for all URL domain names. Domains added to this list are allowed in any form. For example, if the domain "dlink" is added to this list then all of the following URL's are permitted access from the LAN: www.dlink.com, support.dlink.com, etc.

Importing/exporting from a text or CSV file is also supported.

To add/import/export URLs to the approved list:
1. Click **Security** > **Web Content Filter** > **Static Filtering** > **Approved URL** tab.
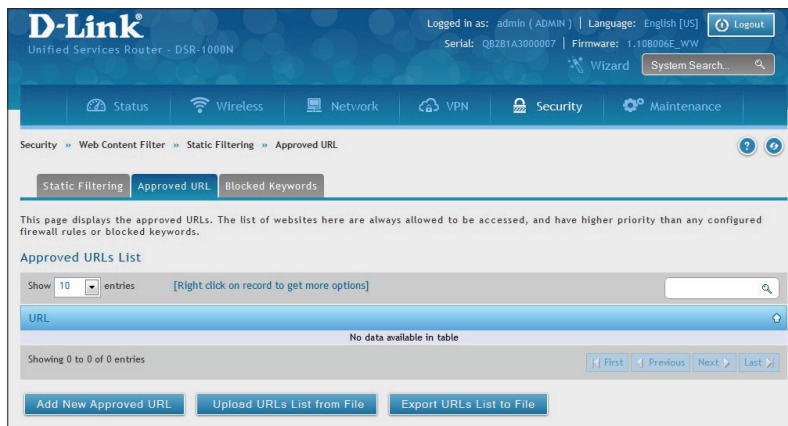

2. To import a list from a text/CSV file, click **Upload URLs List from File**. If you want to export the current list, click **Export URLs List to File**. To add a new URL, click **Add New Approved URL**.
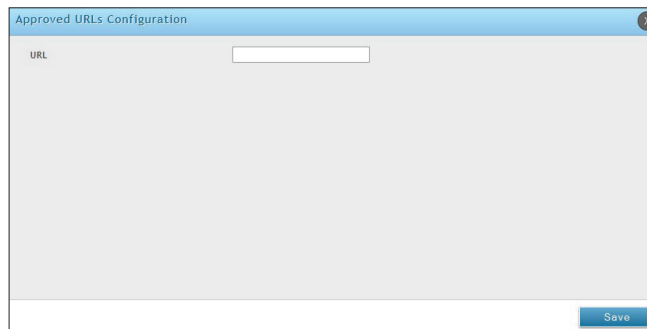

3. Enter a URL and click **Save**.

Blocked Keywords

Path: Security > Web Content Filter > Static Filtering > Blocked Keywords

Keyword blocking allows you to block all website URL's or site content that contains the keywords in the configured list. This is lower priority than the Approved URL List; i.e. if a blocked keyword is present in a site allowed by a trusted domain in the Approved URL List, then access to that site will be allowed. Import/export from a text or CSV file is also supported.

To add/import/export URLs to the approved list:

1. Click **Security** > **Web Content Filter** > **Static Filtering** > **Blocked Keywords** tab.
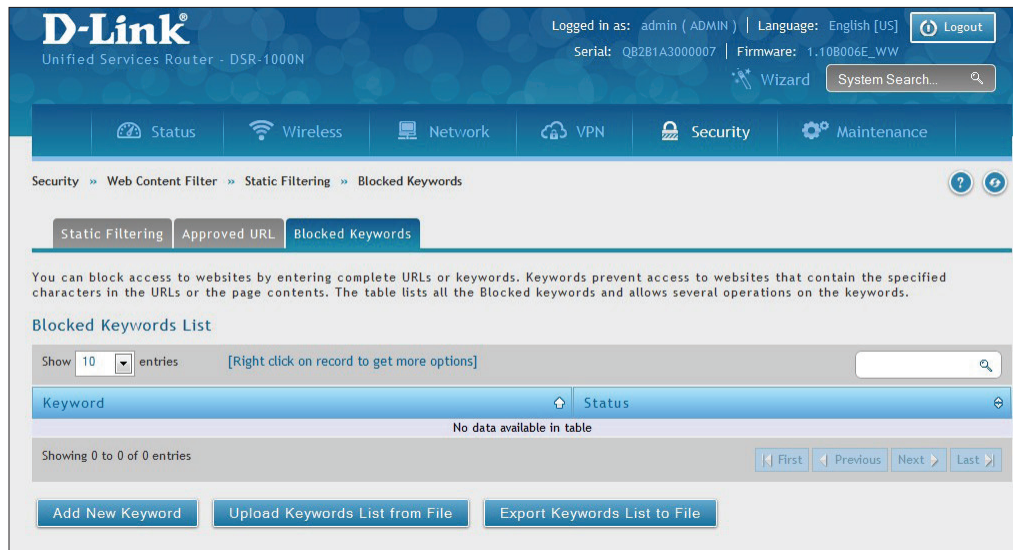

2. To import a list from a text/CSV file, click **Upload Keywords List from File**. If you want to export the current list, click **Export Keywords List to File**. To add a new URL, click **Add New Keyword**.
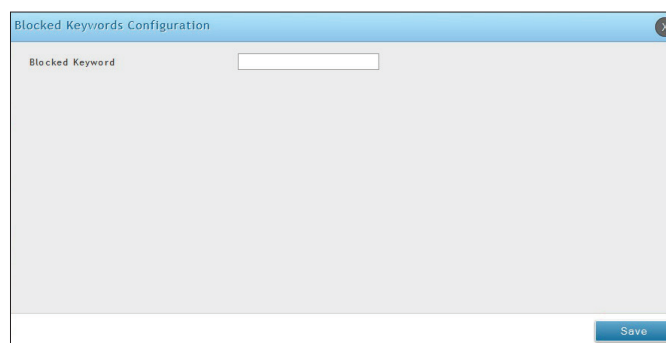

3. Enter a keyword and click **Save**.

Dynamic Filtering

Path: Security > Web Content Filter > Dynamic Filtering

Dynamic Filtering will allow you to filter content from a list of categories. The router must be upgraded with the WCF license and then the Content Filtering option, which allows the user to filter out internet sites, needs to be enabled. When enabled, access to a website belonging to one of these configured categories will be blocked with an error page.

To add/import/export URLs to the approved list:
1. Click **Security** > **Web Content Filter** > **Dynamic Filtering**.
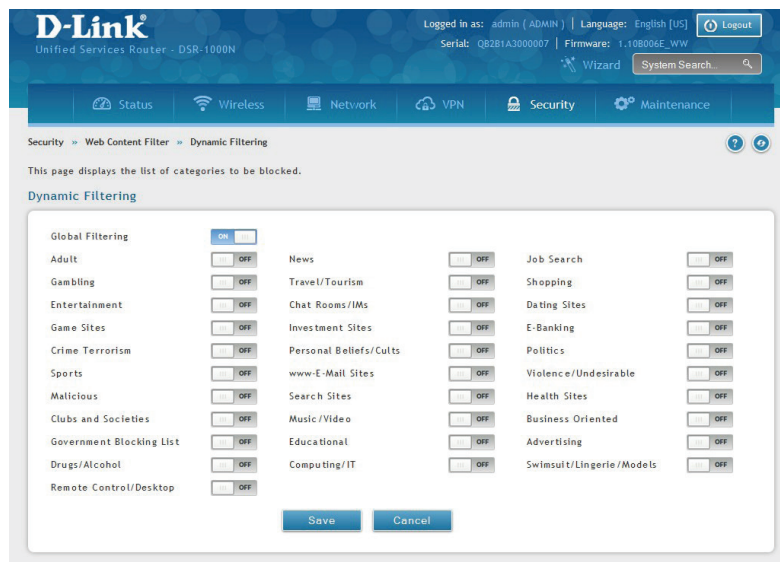

2. Toggle Global Filtering to **ON** to enable dynamic filtering.
3. Toggle any of the listed categories to **ON** to block. Toggle to **OFF** to allow.
4. Click **Save**.

Note: Dynamic WCF license is not available in some regions, please contact D-Link worldwide office for product information.

Firewall
Firewall Rules

Path: Security > Firewall > Firewall Rules > IPv4 Firewall Rules or IPv6 Firewall Rules

Inbound (WAN to LAN/DMZ) rules restrict access to traffic entering your network, selectively allowing only specific outside users to access specific local resources. By default all access from the insecure WAN side are blocked from accessing the secure LAN, except in response to requests from the LAN or DMZ. To allow outside devices to access services on the secure LAN, you must create an inbound firewall rule for each service.

If you want to allow incoming traffic, you must make the router's WAN port IP address known to the public. This is called "exposing your host." How you make your address known depends on how the WAN ports are configured; for this router you may use the IP address if a static address is assigned to the WAN port, or if your WAN address is dynamic a DDNS (Dynamic DNS) name can be used.

Outbound (LAN/DMZ to WAN) rules restrict access to traffic leaving your network, selectively allowing only specific local users to access specific outside resources. The default outbound rule is to allow access from the secure zone (LAN) to either the public DMZ or insecure WAN. On other hand the default outbound rule is to deny access from DMZ to insecure WAN. You can change this default behavior in the Firewall Settings > Default Outbound Policy page. When the default outbound policy is allow always, you can to block hosts on the LAN from accessing internet services by creating an outbound firewall rule for each service.

To create a new firewall rule:
1. Click **Security** > **Firewall** > **IPv4 Firewall Rules** tab or **IPv6 Firewall Rules** tab.
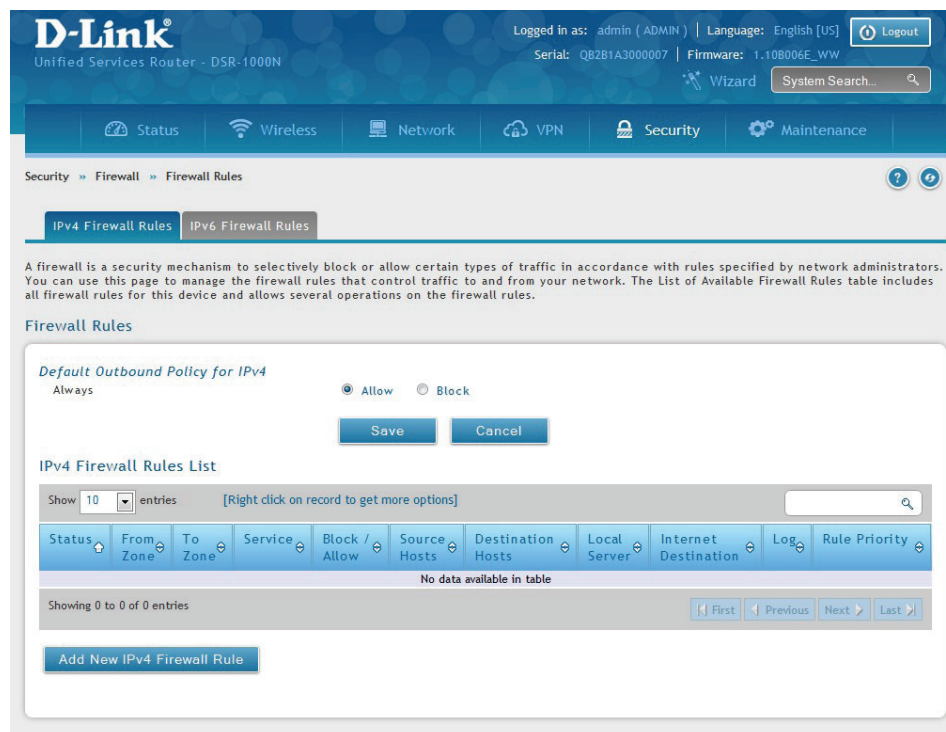

2. Right-click an entry and select either **Edit** or **Delete**. To add a new group, click **Add New IPv4/IPv6 Firewall Rule**.

3. Complete the fields from the table below and click **Save**.

Field	Description
From Zone	Select the source of originating traffic: either secure LAN, public DMZ, or insecure WAN. For an inbound rule WAN should be selected.
To Zone	Select the destination of traffic covered by this rule. If the From Zone is the WAN, the To Zone can be the public DMZ or secure LAN. Similarly if the From Zone is the LAN, then the To Zone can be the public DMZ or insecure WAN.
Service	Select a service from the drop-down menu. ANY means all traffic is affected by this rule.
Action	Select an action from the drop-down menu.
Source Hosts	Select a source host. If you select Single Address or Address Range, you will need to enter the IP address or IP range.
Destination Hosts	Select a Destination host. If you select Single Address or Address Range, you will need to enter the IP address or IP range.
Log	Select whether to log firewall traffic or not.

QoS Priority (IPv4 only)	Outbound rules (where To Zone = insecure WAN only) can have the traffic marked with a QoS priority tag. Select a priority level:
	  • Normal-Service: ToS=0 (lowest QoS)
	  • Minimize-Cost: ToS=1
	  • Maximize-Reliability: ToS=2
	  • Maximize-Throughput: ToS=4
	  • Minimize-Delay: ToS=16

Schedules

Path: Security > Firewall > Schedules

Firewall rules can be enabled or disabled automatically if they are associated with a configured schedule. The schedule configuration page allows you to define days of the week and the time of day for a new schedule, and then this schedule can be selected in the firewall rule configuration page.

Note: *All schedules will follow the time in the router's configured time zone. Refer to the section on choosing your Time Zone and configuring NTP servers for more information.*

To add, delete, or edit a schedule:

1. Click **Security** > **Firewall** > **Schedules**.
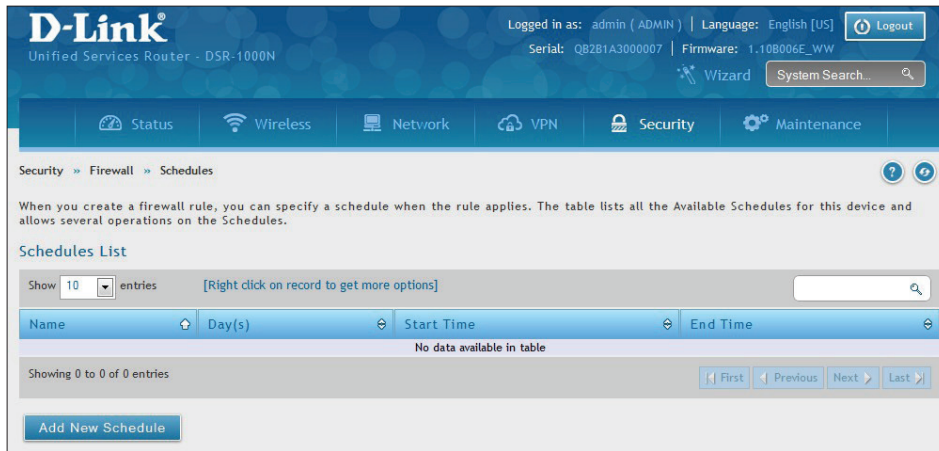

2. Right-click an entry and select either **Edit** or **Delete**. To add a new schedule, click **Add New Schedule**.
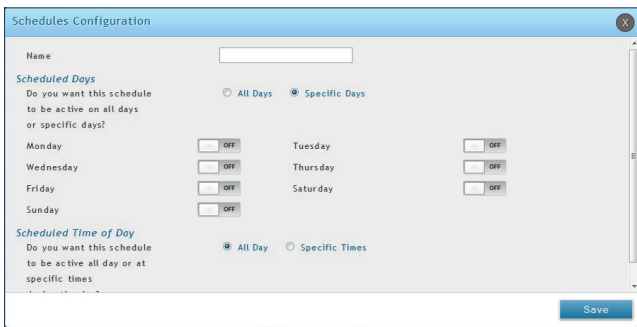

Specific Days enabled
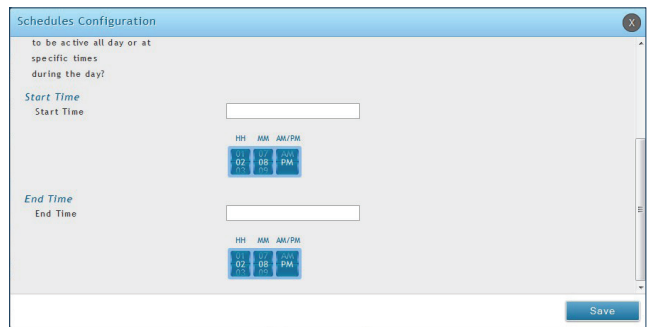

Specific Times enabled

Field	Description
Name	Enter a name for your schedule.
Scheduled Days	Select **All Days** or **Specific Days**.
Monday - Sunday	If you selected *Specific Days*, toggle each day you want to **ON**.
Scheduled Time of Day	Select **All Day** or **Specific Times**.
Start Time/End Time	If you selected *Specific Times*, use the mouse on the blue boxes representing the hour, minutes, and am/pm to select the start time and end time. Click, hold, and move up to decrease the value or move down to increase the value.
Save	Click to save your settings.

Custom Services

Path: Security > Firewall > Custom Services

Custom services can be defined to add to the list of services available during firewall rule configuration. While common services have known TCP/UDP/ICMP ports for traffic, many custom or uncommon applications exist in the LAN or WAN. In the custom service configuration menu you can define a range of ports and identify the traffic type (TCP/UDP/ICMP) for this service. Once defined, the new service will appear in the services list of the firewall rules configuration menu.

To add, delete, or edit a custom service:

1. Click **Security** > **Firewall** > **Custom Services**.
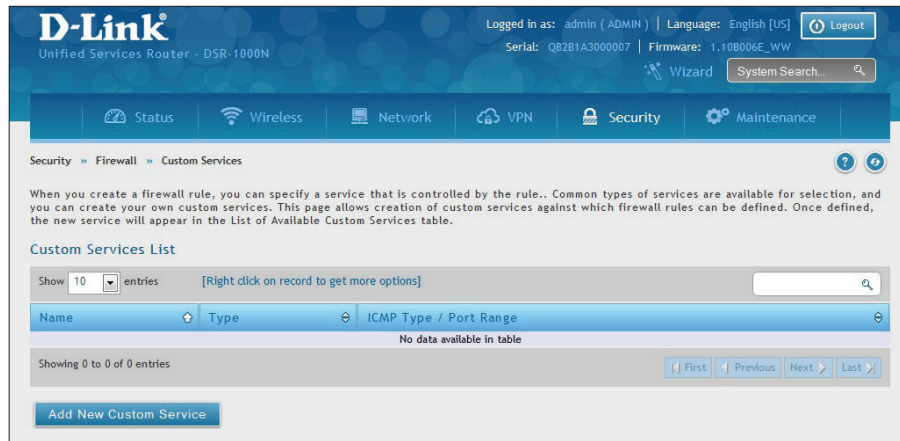

2. Right-click an entry and select either **Edit** or **Delete**. To add a new schedule, click **Add New Custom Service**.

Field	Description
Name	Enter a name for your custom service.
Type	Enter the layer 3 protocol that the service uses (TCP, UDP, BOTH, or ICMP).
Port Type	Select **Port Range** or **Multiple Ports**.
Source Start Port	If you selected Port Range, enter the first **source**(TCP, UDP or BOTH) port of a range that the service uses.
Source Finish Port	If you selected Port Range, enter the last **source** port of a range that the service uses.
Destination Start Port	If you selected Port Range, enter the first **destination** port of a range that the service uses.
Destination Start Port	If you selected Port Range, enter the last **destination** port of a range that the service uses.
Ports	If you selected Multiple Ports, enter the port or ports separated by a comma.
ICMP Type	The ICMP type is a numeric value that can range between 0 and 40.
Save	Click to save your settings.

ALGs

Path: Security > Firewall > ALGs

Application Level Gateways (ALGs) are security components that enhance the firewall and NAT support of this router to seamlessly support application layer protocols. In some cases enabling the ALG will allow the firewall to use dynamic ephemeral TCP/ UDP ports to communicate with the known ports a particular client application (such as H.323 or RTSP) requires, without which the admin would have to open large number of ports to accomplish the same support. Because the ALG understands the protocol used by the specific application that it supports, it is a very secure and efficient way of introducing support for client applications through the router's firewall.

1. Click **Security** > **Firewall** > **ALGs** tab.
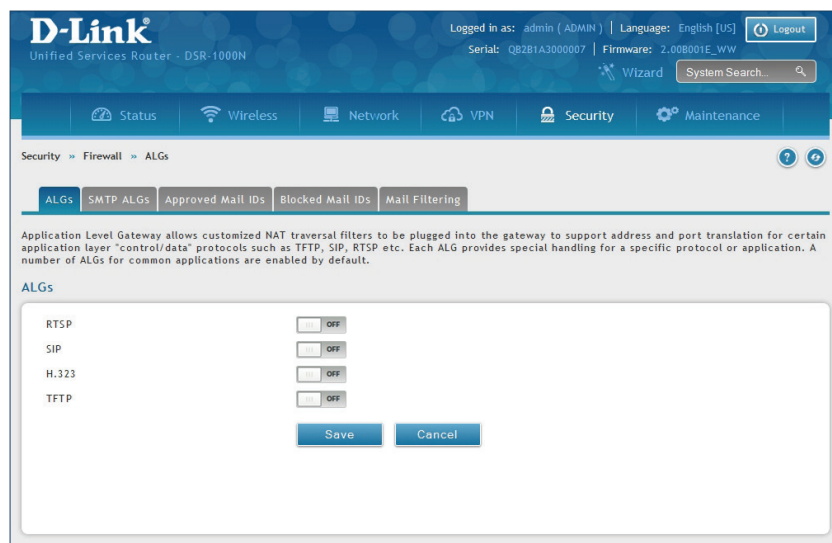

2. Toggle the protocol(s) to **ON** that you want to allow through the router.

SMTP ALGs

Path: Security > Firewall > ALGs > SMTP ALGs

Simple Mail Transfer Protocol (SMTP) is a text based protocol used for transferring email between mail servers over the Internet. Typically the local SMTP server will be located on a DMZ so that mail sent by remote SMTP servers will traverse the router to reach the local server. Local users will then use email client software to retrieve their email from the local SMTP server. SMTP is also used when clients are sending email and SMTP ALG can be used to monitor SMTP traffic originating from both clients and servers.

1. Click **Security** > **Firewall** > **ALGs** > **SMTP ALGs** tab.
2. Toggle *Status* to **ON**.
3. Enter the port at which the SMTP packets are inspected.
4. Click **Save**.

Approved Mail IDs

Path: Security > Firewall > ALGs > Approved Mail IDs

1. Click **Security** > **Firewall** > **ALGs** > **Approved Mail IDs** tab.
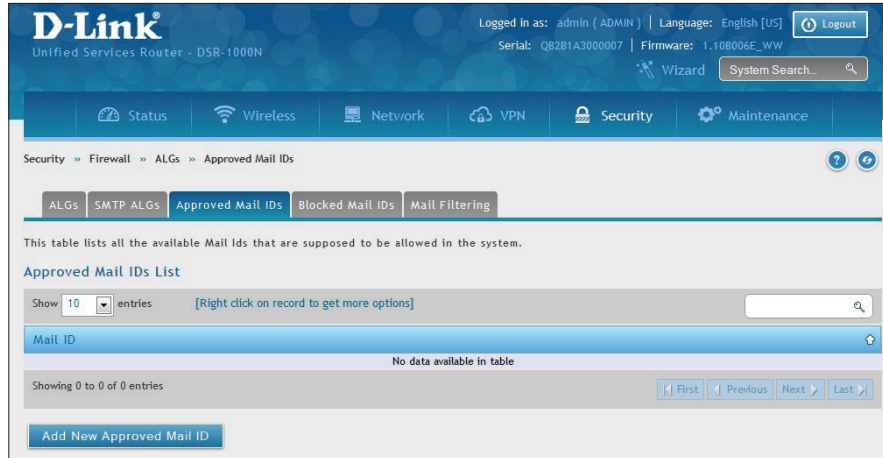

2. Right-click an entry and select either **Edit** or **Delete**. To add a new mail ID, click **Add New Approved Mail ID**.
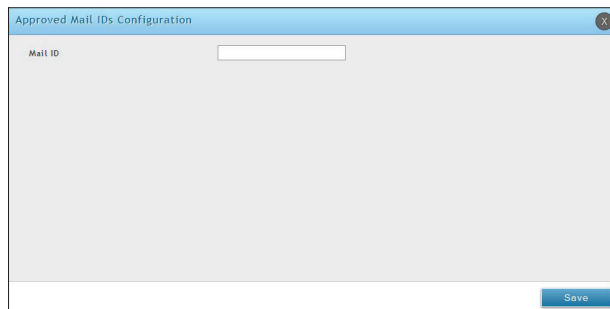

3. Enter a mail ID and click **Save**.

Blocked Mail IDs

Path: Security > Firewall > ALGs > Blocked Mail IDs

1. Click **Security** > **Firewall** > **ALGs** > **Blocked Mail IDs** tab.
2. Right-click an entry and select either **Edit** or **Delete**. To add a new mail ID, click **Add New Blocked Mail ID**.
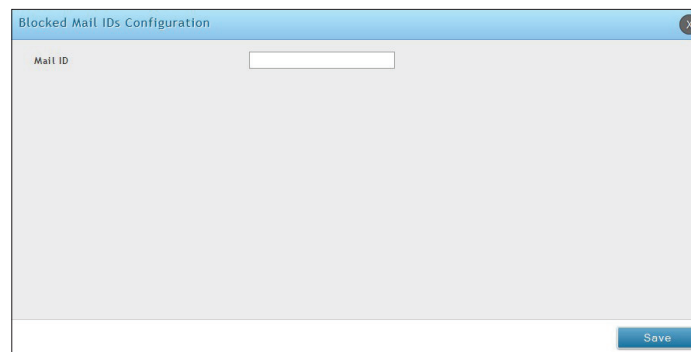

3. Enter a mail ID and click **Save**.

Mail Filtering

Path: Security > Firewall > ALGs > Mail Filtering

1. Click **Security** > **Firewall** > **ALGs** > **Mail Filtering** tab.
2. Right-click an entry and select either **Edit** or **Delete**. To add a new mail ID, click **Add New Mail Filter**.

3. Enter a subject and a mail ID.
4. Select to allow or block.
5. Click **Save**.

VPN Passthrough

Path: Security > Firewall > VPN Passthrough

This router's firewall settings can be configured to allow encrypted VPN traffic for IPsec, PPTP, and L2TP VPN tunnel connections between the LAN and internet. A specific firewall rule or service is not appropriate to introduce this passthrough support; instead the options in the VPN Passthrough page must be toggled to **ON**.

1. Click **Security** > **Firewall** > **VPN Passthrough**.
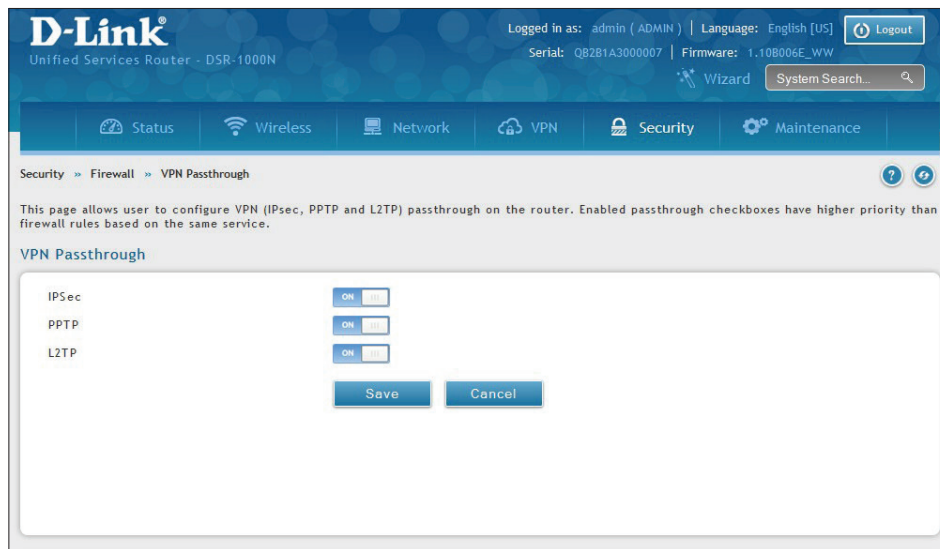

2. Toggle the VPN protocol you want to allow to **ON** and click **Save**.

Dynamic Port Forwarding
Application Rules

Path: Security > Firewall > Dynamic Port Forwarding > Application Rules

Application rules are also referred to as port triggering. This feature allows devices on the LAN or DMZ to request one or more ports to be forwarded to them. Port triggering waits for an outbound request from the LAN/DMZ on one of the defined outgoing ports, and then opens an incoming port for that specified type of traffic. This can be thought of as a form of dynamic port forwarding while an application is transmitting data over the opened outgoing or incoming port(s).

Port triggering application rules are more flexible than static port forwarding that is an available option when configuring firewall rules. This is because a port triggering rule does not have to reference a specific LAN IP or IP range. As well ports are not left open when not in use, thereby providing a level of security that port forwarding does not offer.

Note: Port triggering is not appropriate for servers on the LAN, since there i s a dependency on the LAN device making an outgoing connection before incoming ports are opened.

Some applications require that when external devices connect to them, they receive data on a specific port or range of ports in order to function properly. Th e router must send all incoming data for that application only on the required port or range of ports. The router has a list of common applications and games with corresponding outbound and inbound ports to open. You can also specify a port triggering rule by defining the type of traffic (TCP or UDP) and the range of incoming and outgoing ports to open when enabled.

1. Click **Security** > **Firewall** > **Dynamic Port Forwarding** > **Application Rules** tab.
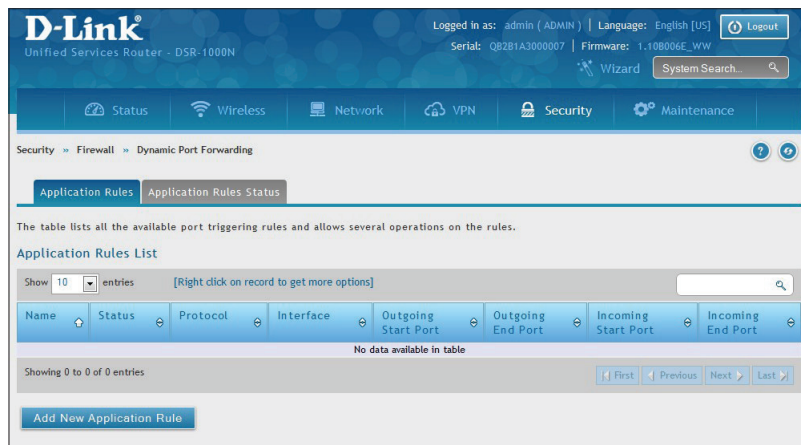

2. Right-click an entry and select either **Edit** or **Delete**. To add a new schedule, click **Add New Application Rule**.

3. Complete the fields from the table below and click **Save**.

Field	Description
Name	Enter a name for your rule.
Enable	Toggle to **ON** to activate the rule.
Protocol	Select **TCP** or **UDP**.
Interface	Select either **LAN** or **DMZ**.
Outgoing (Trigger) Port Range	Enter the start and end trigger port range.
Incoming Port Range	Enter the port range to open.
Save	Click to save your settings.

4. Click on the **Application Rules Status** tab to see a list of rules and their status.

Attack Checks

Path: Security > Firewall > Attack Checks

Attacks can be malicious security breaches or unintentional network issues that render the router unusable Attack checks allow you to manage WAN security threats such as continual ping requests and discovery via ARP scans. TCP and UDP flood attack checks can be enabled to manage extreme usage of WAN resources.

Additionally certain Denial-of-Service (DoS) attacks can be blocked. These attacks, if uninhibited, can use up processing power and bandwidth and prevent regular network services from running normally. ICMP packet flooding, SYN traffic flooding, and Echo storm thresholds can be configured to temporarily suspect traffic from the offending source.

1. Click **Security** > **Firewall** > **Attack Checks**.

2. Complete the fields from the table below and click **Save**.

Field	Description
Stealth Mode	If this option is toggled to **ON**, the router will not respond to port scans from the WAN. This makes it less susceptible to discovery and attacks.
Block TCP Flood	If this option is toggled to **ON**, the router will drop all invalid TCP packets and be protected from a SYN flood attack.
Block UDP Flood	If this option is toggled to **ON**, the router will not accept more than 20 simultaneous, active UDP connections from a single computer on the LAN. You can set the number of simultaneous active UDP connections to be accepted from a single computer on the LAN; the default is 25.
Allow Ping from LAN	Toggle to **ON** to allow local computers to ping.
Block ICMP Notification	Toggle to **ON** to prevent ICMP packets from being identified as such. ICMP packets, if identified, can be captured and used in a Ping (ICMP) flood DoS attack.
Block Fragmented Packets	Toggle to **ON** to drop any fragmented packets through or to the gateway
Block Multicast Packets	Toggle to **ON** to drop multicast packets, which could indicate a spoof attack, through or to the router.
Block Spoofed IP Packets	Toggle to **ON** to block any spoofed IP packets.
SYN Flood Detect Rate	The rate at which the SYN Flood can be detected.
Echo Storm	The number of ping packets per second at which the router detects an Echo storm attack from the WAN and prevents further ping traffic from that external address.
ICMP Flood	The number of ICMP packets per second at which the router detects an ICMP flood attack from the WAN and prevents further ICMP traffic from that external address.

Intel® AMT

Path: Security > Firewall > Intel® AMT

Intel® Active Management Technology (AMT) allows you to remotely access and manage every networked device, even those that lack a working operating system or hard drive, or are turned off as long as the computer is connected to line power and to the network. Intel AMT uses a separate management processor that runs independently on the client machine and can be reached through the wired or wireless network.

1. Click **Security** > **Firewall** > **Intel AMT**.

2. Complete the fields from the table below and click **Save**.

Field	Description
Ports	When enabled, inbound/outbound firewall rules are added for certain ports to enable Intel AMT service.
WAN Host	Select **ANY** to allow all hosts access or select **Specify WAN IPs** and enter IP addresses of hosts (separate with a comma) you want to grant access to. Do not use spaces.
Internal IP Address	Enter the LAN IP address.
Reflector	Toggle to **ON** to enable Reflector. This will send data back to the client on selected ports.
Redirect to Port 16992-16995	Toggle to **ON** to use the selected port. Enter the listening port on which the server will listen for incoming connections.
Redirect to Port 9971	Toggle to **ON** to use the selected port. Enter the listening port on which the server will listen for incoming connections.

IPS

Path: Security > Firewall > IPS

The router's Intrusion Prevention System (IPS) prevents malicious attacks from the internet from accessing the private network. Static attack signatures loaded to the router allow common attacks to be detected and prevented. The checks can be enabled between the WAN and DMZ or LAN, and a running counter will allow the administrator to see how many malicious intrusion attempts from the WAN have been detected and prevented.

Note: The DSR-150/150N routers do not support Intrusion Prevention System.

    1. Click **Security** > **Firewall** > **IPS**.
    2. Complete the fields from the table below and click **Save**.

Field	Description
Enable Intrusion Detection	Toggle to **ON** to enable intrusion detection.
Enable Intrusion Prevention	Toggle to **ON** to enable intrusion prevention.
LAN and WAN	Toggle to **ON** to detect intrusions between the LAN and WAN interfaces.
DMZ and WAN	Toggle to **ON** to detect intrusions between the DMZ and WAN interfaces.
Number of Signatures Loaded	Displays the number of signatures loaded.

Maintenance
System Settings

Path: Maintenance > Administration > System Setting

You may change the name of the router here.

1. Click **Maintenance** > **Administration** > **System Setting**.

2. Complete the fields from the table below and click **Save**.

Field	Description
Current System Name	Displays the current name for the router.
New Name for System	Enter a new name for the router.
Save	Click to save and activate your settings.

Date and Time

Path: Maintenance > Administration > Date and Time

You can configure your time zone, whether or not to adjust for Daylight Savings Time, and with which Network Time Protocol (NTP) server to synchronize the date and time. You can choose to set Date and Time manually, which will store the information on the router's real time clock (RTC). If the router has access to the internet, the most accurate mechanism to set the router time is to enable NTP server communication.

1. Click **Maintenance** > **Administration** > **Date and Time**.

2. Complete the fields from the table below and click **Save**.

Field	Description
Current Device Time	Displays the current date and time on the router.
Time Zone	Select your time zone from the drop-down menu.
Daylight Saving	Toggle to **ON** to enable daylight saving time.
NTP Servers	Toggle to **ON** to use NTP servers on the Internet.
NTP Server Type	Select either **Default** or **Custom** to enter specific NTP Server addresses.
Primary NTP Server	If you selected _Custom_, enter the primary NTP server address.
Secondary NTP Server	If you selected _Custom_, enter the secondary NTP server address.
Time to re-synchronize	Enter the time in minutes for the router to re-synch with the NTP server(s).
Save	Click to save and activate your settings.

Session Settings

Path: Maintenance > Administration > Session Settings

Here you can set the timeout value for admin and guest logins.

1. Click **Maintenance** > **Administration** > **Session Settings**.

2. Complete the fields from the table below and click **Save**.

Field	Description
Administrator	Enter the timeout value in minutes for the Administrator account.
Guest	Enter the timeout value in minutes for the Guest account.
Save	Click to save and activate your settings.

License Updates

Path: Maintenance > Administration > License Update

Certain features can be added to the router by purchasing a license key. An activation code is provided based on the router's MAC Address, so it will be unique to that particular device.

Each license has the following three parameters:

Field	Description
Model	The license model as it relates to the feature being added.
Activation Code	The activation code corresponding to this license.
Expiration	Licenses can either have a fixed duration, or are perpetual for the life of this router.
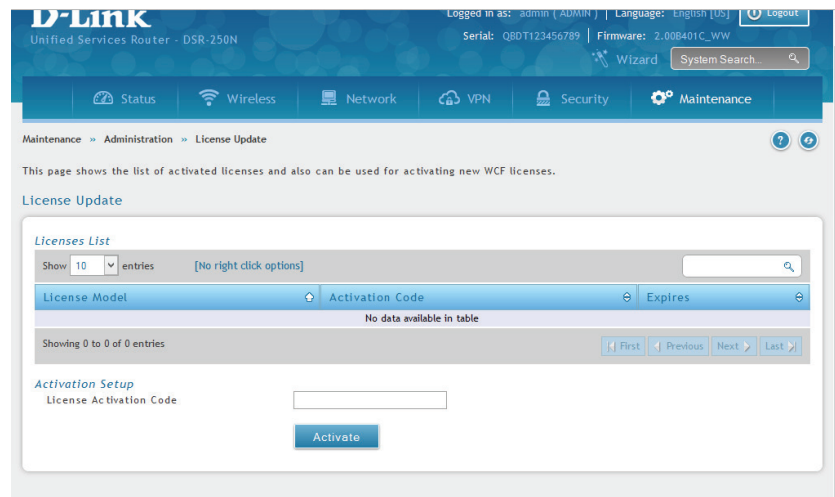

USB Share Ports

Path: Maintenance > Administration > USB Share Ports

This page allows configure the SharePort feature available on this router.

1. Click **Maintenance** > **Administration** > **USB Share Ports**.

2. Complete the fields from the table below and click **Save**.

Field	Description
USB Port 1 Printer	Toggle to **ON** to enable USB port 1. Once enabled you will need to enter your printer information.
USB Port 2 Printer	Toggle to **ON** to enable USB port 2. Once enabled you will need to enter your printer information.
Interface Name	Displays the name of the printer interface.
Enable Printer	Displays if the printer is enabled or not. Toggle to **ON** to enable.
Save	Click to save and activate your settings.

SMS Service
Inbox

Path: Maintenance > Administration > SMS Service > Inbox

The D-Link Services Router has a USB interface to connect 3G modem support to send and receive Short Messaging Service (SMS). The received messages can be seen in the Inbox and allows the user to create a new SMS. If WAN3 is used in dedicated WAN mode, load balancing mode, or if the 3G USB device is not connected to router then the controls on this page will not be available.

> To view any incoming messages:
> 1. Click **Maintenance** > **Administration** > **SMS Service** > **Inbox** tab.
> 2. The following details are displayed.

Field	Description
S. No	Displays the serial number of the message.
Sender	Displays the sender of the message.
Time Stamp	Displays the time when the message was sent.
Text	Displays the content of the message.
Save	Click to save and activate your settings.

> 3. Right-click the entry to delete, refresh, reply, or forward the message.

Create SMS

Path: Maintenance > Administration > SMS Service> Create SMS

This page allows you to send a message using the SMS service.

1. Click **Maintenance** > **Administration** > **SMS Service** > **Create SMS** tab.

2. Complete the fields from the table below and click **Send Message**.

Field	Description
Receiver	Enter the phone number of the intended receiver.
Text Message	Enter the message you want to send.
Send Message	Click to send your message.
Cancel	Click to reset the fields.

Package Manager

Path: Maintenance > Administration > Package Manager

A package is a set of files which are installed by the router from D-Link's repositories. This feature allows users to download new drivers for supported USB devices and language packs to enable multi-lingual support for the router's management interface. Multi-lingual support via the package manager allows the user to choose a language of choice so that the entire textual content in the router's user interface is presented in the selected language.

This feature supports a single driver and single language pack to be stored in the router (i.e. these files are available for use after device reboot) . There are 2 types of installations supported by this feature:

1. **Manual Installation:** Upon selecting manual installation, the user has to download the package which will then display the available languages that the router GUI now supports.

   Note: Only drivers provided by D-Link can be used for manual installation. A validation process will be performed during installation.

2. **Auto Installation:** By selecting the link "click here" the auto-installation of the package is exercised. A page showing the list of available drivers / language packs is displayed from which the user can select and install one of the options. For this type of installation the router must be able to access the internet, as this will allow the user to download the package from a repository server which consists of all the available languages.

1. Click **Maintenance** > **Administration** > **Package Manager**.
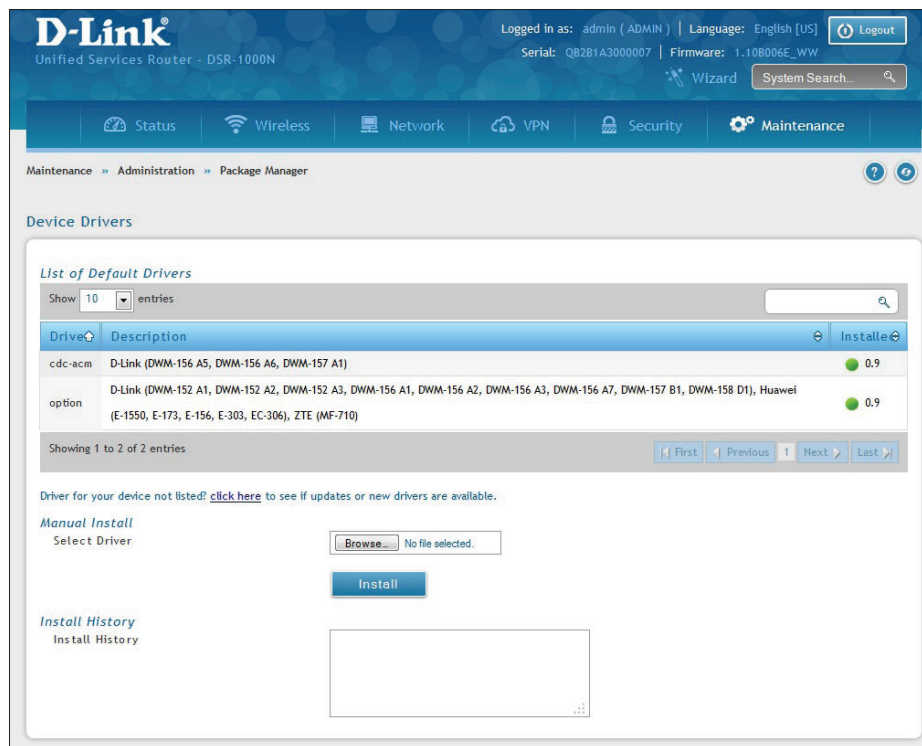

2. Complete the fields from the table below.

Field	Description
List of Default Drivers	Displays the default drivers that are installed.
Click Here	Click to display a list of available packages for download. You must be connected to the Internet. Here you can select the driver to update or install.
Manual Install	If you have downloaded a packed, click **Browse** and select the package. Click **Open** and then click **Install**.
Install History	Displays a list of package installations.

Set Language

Path: Maintenance > Administration > Set Language

You can download language packs (refer to "Package Manager" on page 170) and install them on the router. Once you have downloaded a pack, follow the steps below to install:

1. Click **Maintenance** > **Administration** > **Set Language**.
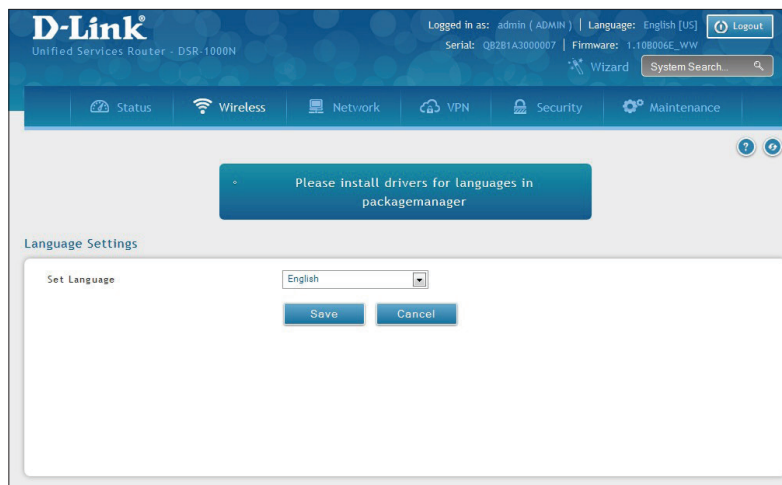

2. Select a loaded language pack from the drop-down menu and click **Save**.

Web GUI Management

Path: Maintenance > Administration > Web GUI Management

The Web GUI Management page will allow you to specify by IP address or VLAN what users can configure the router using the web GUI.

1. Click **Maintenance** > **Administration** > **Web GUI Management**.
2. Toggle *Enable* to **ON** and click **Save**.
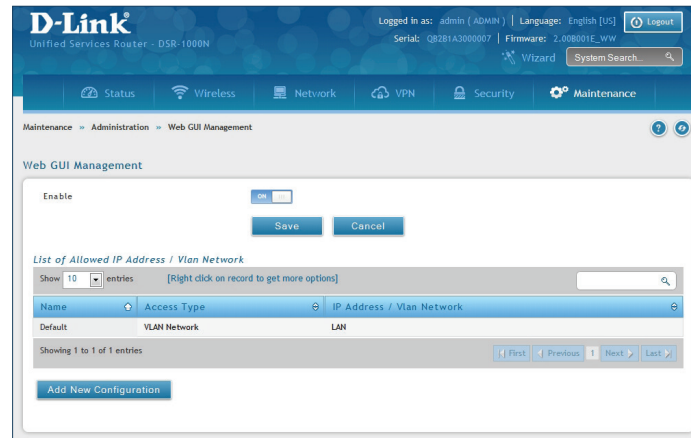

3. Click **Add New Configuration**.

4. Enter a name for this configuration.
5. Select either **Single IP Address** and enter the IP address of the computer/device or **VLAN Network** and enter the VLAN ID that you want to allow access to the web GUI.
6. Click **Save**.

Remote Management

Path: Maintenance > Management > Remote Management

Enable this feature to be able to manage the router from a remote location, using HTTPS or Telnet. Both HTTPS and Telnet access can be restricted to a subset of IP addresses. The router administrator can define a known PC, single IP address or range of IP addresses that are allowed to access the GUI with HTTPS. The opened port for SSL traffic can be changed from the default of 443 at the same time as defining the allowed remote management IP address range.

1. Click **Maintenance** > **Management** > **Remote Management**.

2. Complete the fields from the table below and click **Save**.

Field	Description
Enable Remote Management	Toggle to **ON** to enable remote management.
HTTPS Port No.	Enter the port for HTTPS access. The default port is 443.
SSH	Toggle **ON** to enable SSH (Secure Shell) protocol which can be used to access the CLI over the network from a remote host.
SNMP	Toggle to **ON** to enable SNMP for remote management.
Access Type	Select either All IP Addresses, IP Address Range (enter an IP range), or Only Selected PC (enter an IP address).
Respond to Ping	Toggle to **ON** to allow the router to respond to ping requests from the WAN.
Save	Click to save and activate your settings.
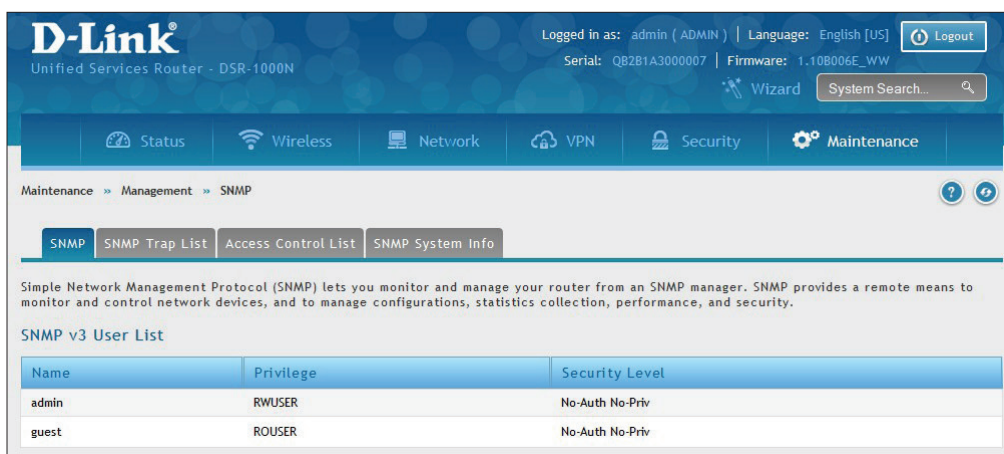

SNMP

Path: Maintenance > Management > SNMP

SNMP is an additional management tool that is useful when multiple routers in a network are being managed by a central Master system. When an external SNMP manager is provided with this router's Management Information Base (MIB) file, the manager can update the router's hierarchal variables to view or update configuration parameters. The router as a managed device has an SNMP agent that allows the MIB configuration variables to be accessed by the Master (the SNMP manager). The Access Control List on the router identifies managers in the network that have read-only or read-write SNMP credentials. The Traps List outlines the port over which notifications from this router are provided to the SNMP community (managers) and also the SNMP version (v1, v2c, v3) for the trap.

SNMP User List

1. Click **Maintenance** > **Management** > **SNMP** > **SNMP** tab.

2. Right-click a user and select **Edit** if you want to change the security level.
3. Select the security level from the drop-down list. Select one of the following:
    - **No-Auth No-Priv:** Only requires a user name match for authentication.
    - **Auth No-Priv:** Provides authentication based on the MD5 or SHA algorithms.
    - **Auth Priv:** Provides authentication based on the MD5 or SHA algorithms as well as encryption privacy with the DES 256-bit standard.
4. Click **Save**.

SNMP Trap List

Path: Maintenance > Management > SNMP > SNMP Trap List

To create a new SNMP trap:

1. Click **Maintenance** > **Management** > **SNMP** > **SNMP Trap List** tab.
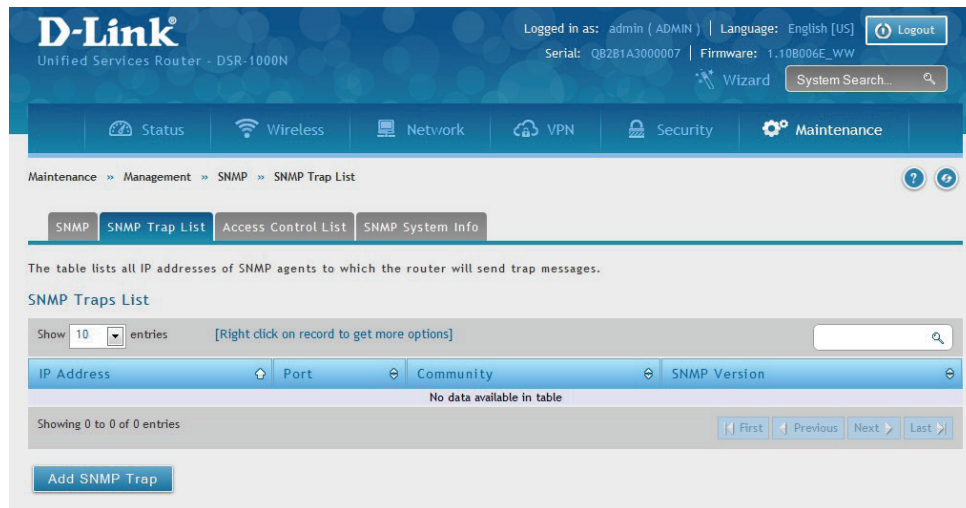

2. Right-click an entry and select either **Edit** or **Delete**. To add a new trap, click **Add SNMP Trap**.

3. Complete the fields from the table below and click **Save**.

Field	Description
IP Address	The IP Address of the SNMP trap agent.
Port	The SNMP trap port to which the trap messages will be sent.
Community	The community string to which the agent belongs. Most agents are configured to listen for traps in the Public community.
Authentication Type	The SNMP version used by the trap agent. The choices are v1, v2c, or v3.
Save	Click to save and activate your settings.

Access Control

Path: Maintenance > Management > SNMP > Access Control List

To edit, delete, or create a new access control entry:

1. Click **Maintenance** > **Management** > **SNMP** > **Access Control List** tab.
2. Right-click an entry and select either **Edit** or **Delete**. To add a new trap, click **Add Access Control**.
3. Complete the fields from the table below and click **Save**.

Field	Description
IP Address	The IP Address of the SNMP agent.
Subnet Mask	The network mask used to determine the list of allowed SNMP managers.
Community	The community string to which the agent belongs. Most agents are configured to listen for traps in the Public community.
Access Type	Access will be either read only (ROcommunity) or read-write (RWcommunity).
Save	Click to save and activate your settings.

SNMP System Info

Path: Maintenance > Management > SNMP > SNMP System Info

To create a new SNMP trap:

1. Click **Maintenance** > **Management** > **SNMP** > **SNMP System Info** tab.

2. Complete the fields from the table below and click **Save**.

Field	Description
SysContact	The name of the contact person for this router. Examples: admin, John Doe.
SysLocation	The physical location of the router: Example: Rack #2, 4th Floor.
SysName	A name given for easy identification of the router.
Save	Click to save and activate your settings.

Diagnostics
Ping an IP Address/Domain Name

Path: Maintenance > Management > Diagnostics > Network Tools

As part of the diagnostics functions on the router, you can ping an IP address or domain name. You can use this
function to test connectivity between the router and another device on the network or the Internet.

1. Click **Maintenance** > **Diagnostics** > **Network Tools** tab.
2. Under *Command Output for Ping and Traceroute*, in the IP Address/Domain Name field, enter an IP
    address or domain name.
3. Click **Ping**. The results will appear in the *Command Output* display below.

Using Traceroute

Path: Maintenance > Management > Diagnostics > Network Tools

The router provides a Traceroute function that lets you map the network path to a public host. Up to 30 "hops" between this router and the destination will be displayed.

1. Click **Maintenance** > **Diagnostics** > **Network Tools** tab.
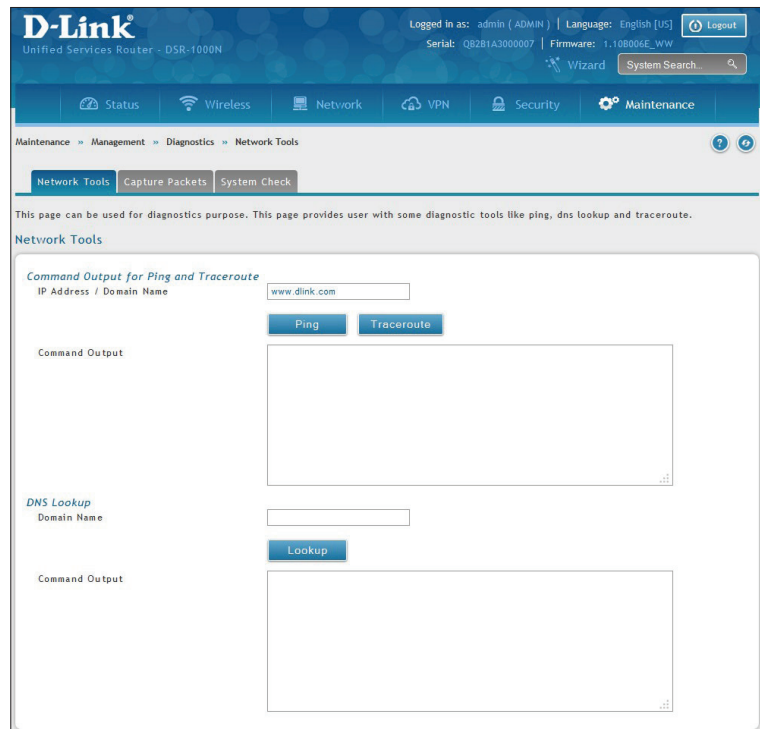

2. Under *Command Output for Ping and Traceroute*, in the IP Address/Domain Name field, enter an IP address or domain name.
3. Click **Traceroute**. The results will appear in the *Command Output* display below.

Performing DNS Lookups

Path: Maintenance > Management > Diagnostics > Network Tools

The router provides a DNS lookup function that lets you retrieve the IP address of a Web, FTP, Mail, or any other server on the Internet.

1. Click **Maintenance** > **Diagnostics** > **Network Tools** tab.
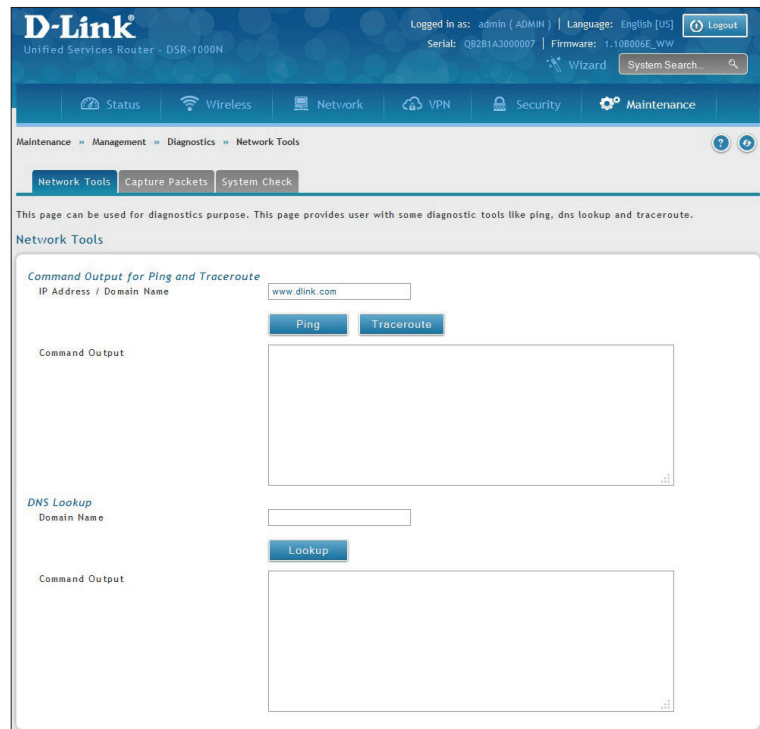

2. Under *DNS Lookup*, in the Domain Name field, enter an Internet name.
3. Click **Lookup**. The results will appear in the *Command Output* display. If the host or domain entry exists, a response will appear with the IP address. If the message Host Unknown appears, the Internet name does not exist.

Capture Packets

Path: Maintenance > Management > Diagnostics > Capture Packets

The router lets you capture all packets that pass through the LAN and WAN interfaces. The packet trace is limited to 1MB of data per capture session. If the capture file size exceeds 1MB, it is deleted automatically and a new capture file is created.

1. Click **Maintenance** > **Diagnostics** > **Capture Packets** tab.
2. Select an interface from the drop-down menu.
3. Click **Start Trace**. The trace can be downloaded by clicking the **Download** button, which will immediately begin the download to the browser's default download location. To stop the trace click **Stop Trace**.

System Check

Path: Maintenance > Management > Diagnostics > System Check

As part of the diagnostics functions on the router, you can view the static and dynamic routes for both IPv4 and IPv6.

1. Click **Maintenance** > **Diagnostics** > **System Check** tab.
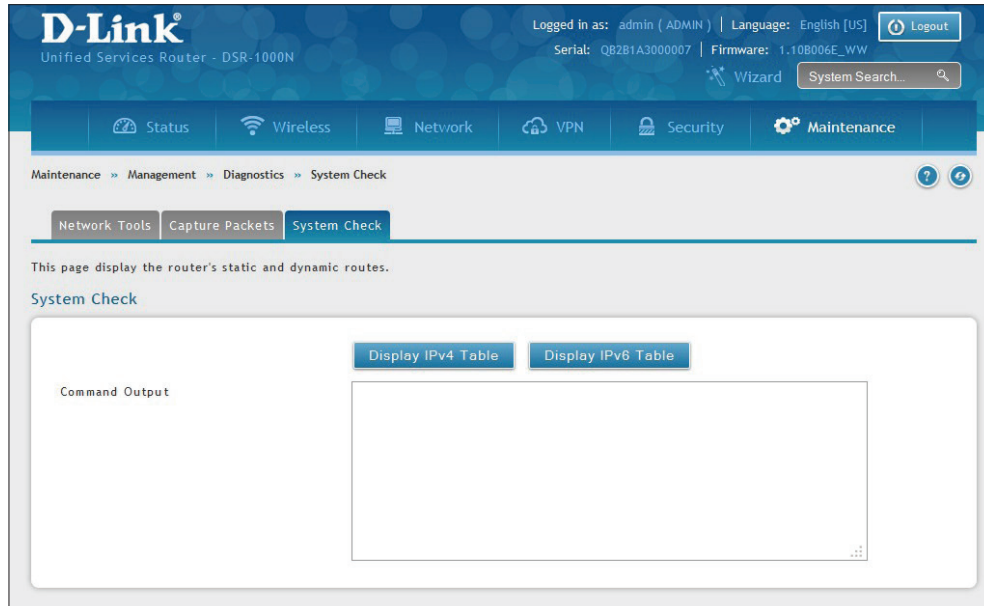

2. Click **Display IPv4 Table** or **Display IPv6 Table**. The results will appear in the Command Output display.

Power Saving

Path: Maintenance > Management > Power Saving

The router allows you to adjust the power consumption of the hardware based on your actual usage. The two "green" options available for your LAN switch are Power Saving by Link Status and Length Detection State.

1. Click **Maintenance** > **Diagnostics** > **Power Saving**.
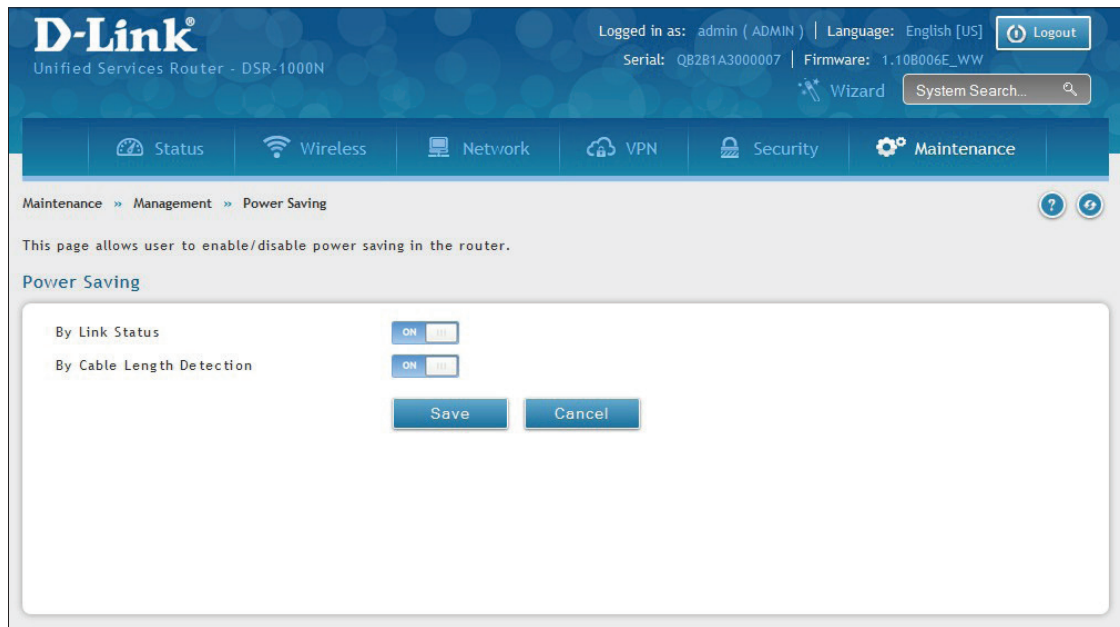

2. Complete the fields from the table below and click **Save**.

Field	Description
By Link Status	With "Power Saving by Link Status" option toggled to **ON**, the total power consumption by the LAN switch is dependent function of on the number of connected ports. The overall current draw when a single port is connected is less than when all the ports are connected.
By Cable Length Detection	With "Length Detection State" option toggled to **ON**, the overall current supplied to a LAN port is reduced when a smaller cable length is connected on a LAN port.
Save	Click to save and activate your settings.

Firmware Upgrade

You can upgrade to a newer firmware version from the Administration web page. In the Firmware Upgrade section, to upgrade your firmware, click Browse, locate and select the firmware image on your host, and click Upgrade. After the new firmware image is validated, the new image is written to flash and the router will automatically reboot with the new firmware.

Warning: *During the firmware upgrade, do NOT try to go online, turn off the DSR, shut down your PC, or interrupt the process in anyway until the operation is complete. This should take only a minute or so including the reboot process. Interrupting the upgrade process at specific points when the flash is being written to may corrupt the flash memory and render the router unusable without a low-level process of restoring the flash firmware (not through the web GUI).*

Check Update

Path: Maintenance > Firmware > Firmware Upgrade

This router supports an automated notification to determine if a newer firmware version is available for this router. By clicking the **Check Now** button in the notification section, the router will check a D-Link server to see if a newer firmware version for this router is available for download.

To see if a new version is available:
1. Click **Maintenance** > **Firmware** > **Firmware Upgrade** > **Check Update** tab.
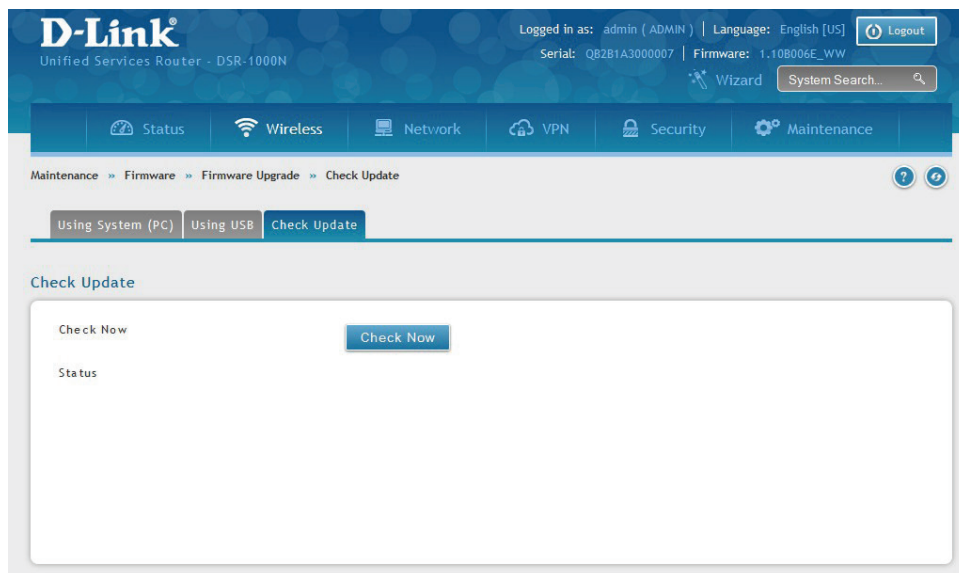

2. Click **Check Now**. If new firmware is available or if you have the most current version a message will appear under *Status*.

Using PC

To upgrade the firmware from a PC:

1. Download the latest firmware version from the D-Link support website.
2. Once downloaded, log in to the router and click **Maintenance** > **Firmware** > **Firmware Upgrade** > **Using System (PC)** tab.
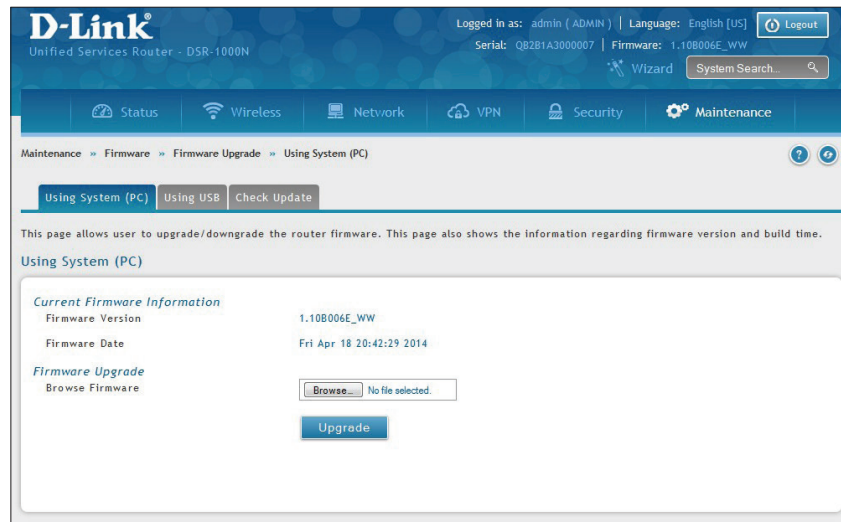

3. Click **Browse** and locate the firmware file you downloaded. Select it and click **Open**.
4. Click **Upgrade**.

   Note: *The upgrade process takes a few minutes. Do not interrupt the upgrade or turn off the router; otherwise you can damage the firmware. Wait for the upgrade to complete before browsing any sites from your browser.*

Using USB

To upgrade the firmware using a USB thumb drive:

1. Download the latest firmware version from the D-Link support website and copy the file to a USB thumb drive.

2. Plug the USB thumb drive into a USB port on the router.

3. Log in to the router and click **Maintenance** > **Firmware** > **Firmware Upgrade** > **Using USB** tab.
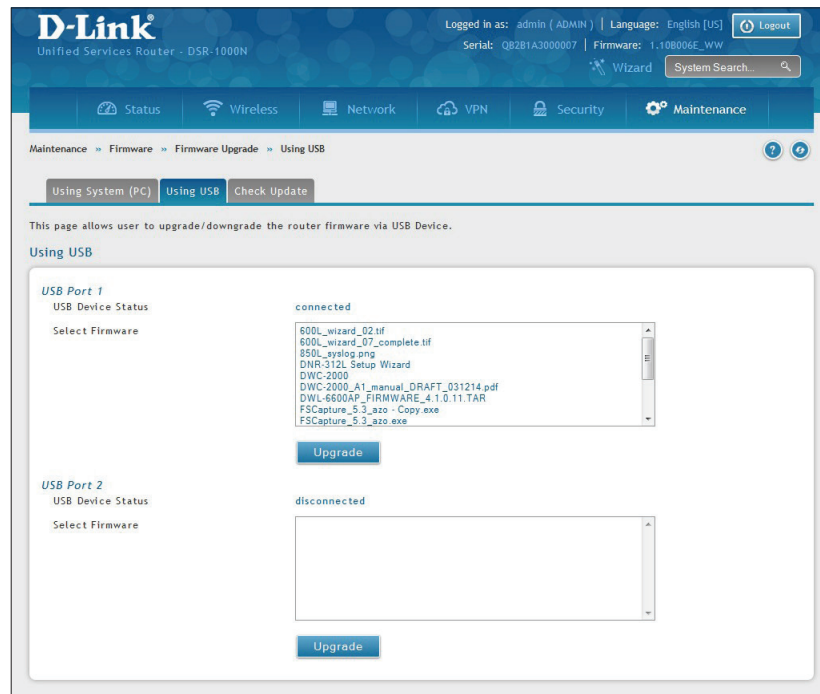

4. Select the firmware file from the list and click **Upgrade**.

   Note: *The upgrade process takes a few minutes. Do not interrupt the upgrade or turn off the router; otherwise you can damage the firmware. Wait for the upgrade to complete before browsing any sites from your browser.*

Configuration Files

Backup

Path: Maintenance > Firmware > Backup / Restore

After you configure the router, you can back up the configuration settings. When you back up the settings, they are saved as a file. You can then use the file to restore the settings on the same router if something goes wrong or on a different router (must be the same model) that will replace the existing router.

To backup your configuration files:
1. Click **Maintenance** > **Firmware** > **Backup / Restore** tab.
2. To save the file to your computer, click **Save to System (PC)**. If you have a USB thumb drive connected to the router, you can click **Save to USB Port 1** (or Port 2).

Restore

To restore your settings from a saved backup file:

1. Click **Maintenance** > **Firmware** > **Backup / Restore**.
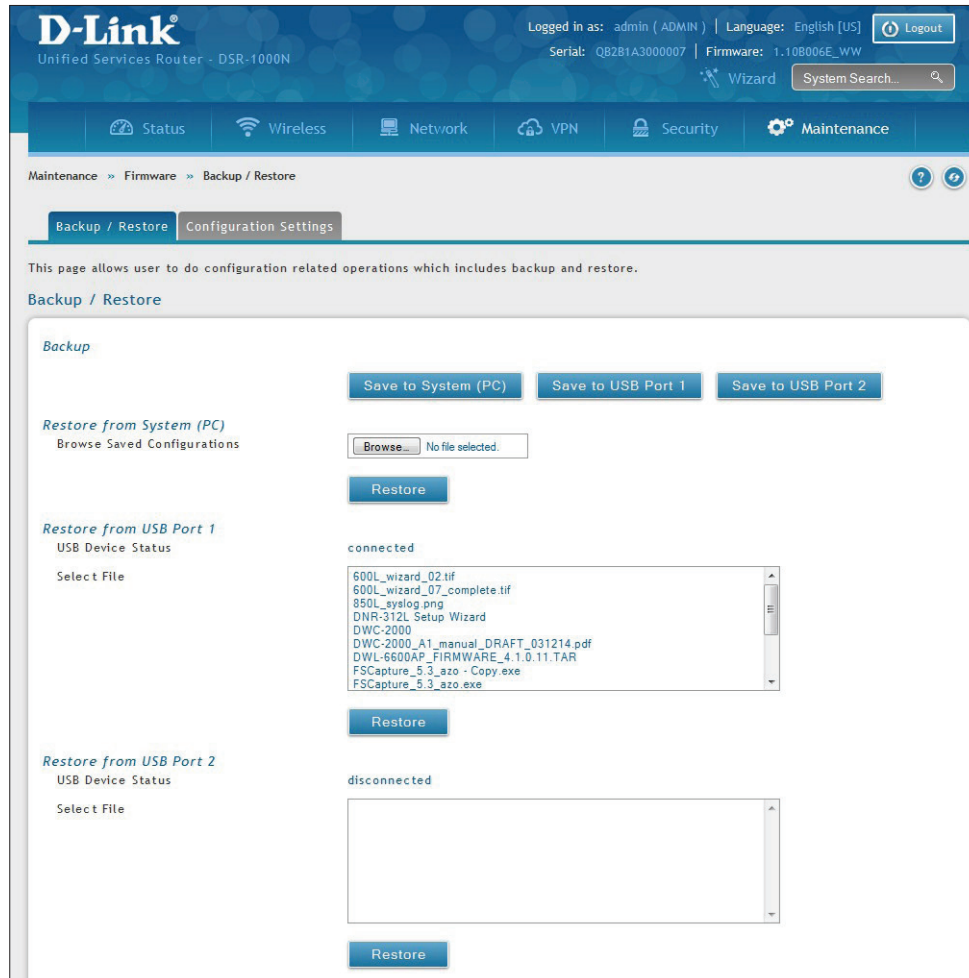

2. To restore the file from your computer, click **Browse** and select the file. Click Open and then click Restore.

   To restore the file from a USB thumb drive, select the file in the list under the corresponding USB port and click **Restore**.

Configuration Settings

If there is a USB storage device currently plugged in to the router, you can enable auto-backup. The snapshot of current configuration settings will be updated on the USB storage device and overwrite any files with the same filename (i.e., if there was an earlier configuration backup done to this location).

1. Click **Maintenance** > **Firmware** > **Backup / Restore** > **Configuration Settings** tab.
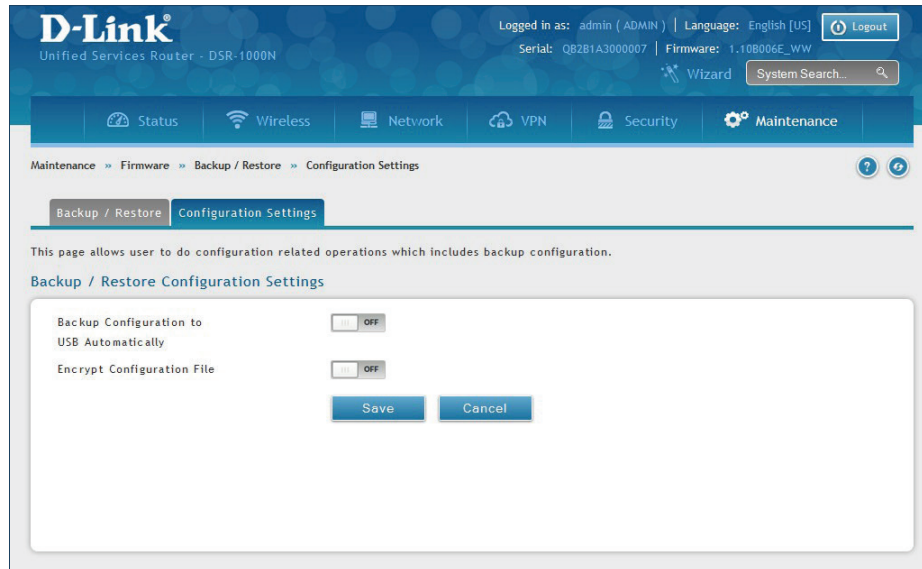

2. Toggle *Backup Configuration to USB Automatically* to **ON** to automatically save your configuration settings to a file on your USB storage device.

3. Toggle *Encrypt Configuration File* to **ON** to encrypt the configuration file. This will ensure confidential information like system username/passwords are not available for view by unauthorized sources. Enabling this option will apply to configuration files backed up on the host as well as a USB drive.

Soft Reboot

Performing a soft reboot simply performs a power cycle.

1. Click **Maintenance** > **Firmware** > **Soft Reboot**.
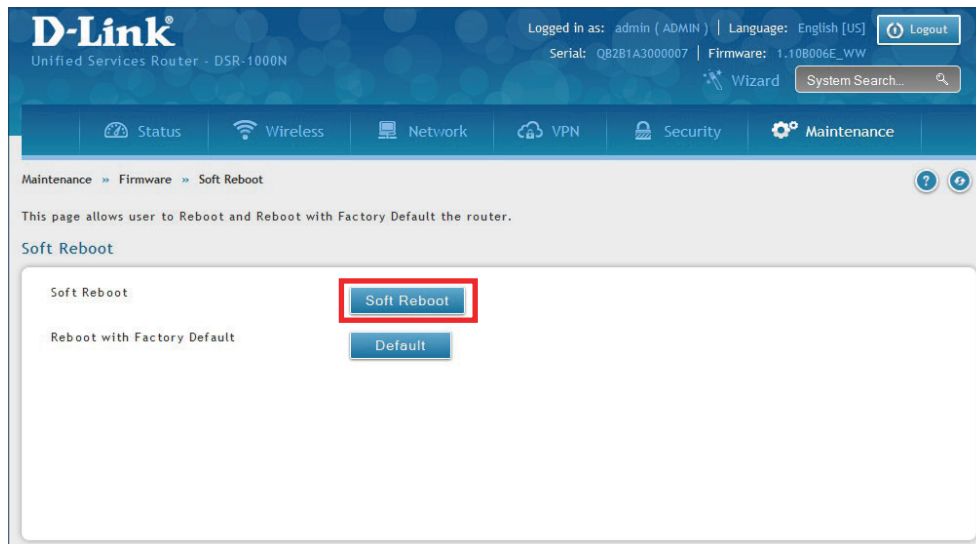

2. Click **Soft Reboot**. The router will power cycle.

Reset to Factory Default Settings

If you reset the router to its factory default settings, it returns to the state when it was new — all changes you made to the default configuration are lost. Examples of settings that get restored include critical things you need to get online, such as login password, SSID, IP addresses, and wireless security keys.

1. Click **Maintenance** > **Firmware** > **Soft Reboot**.
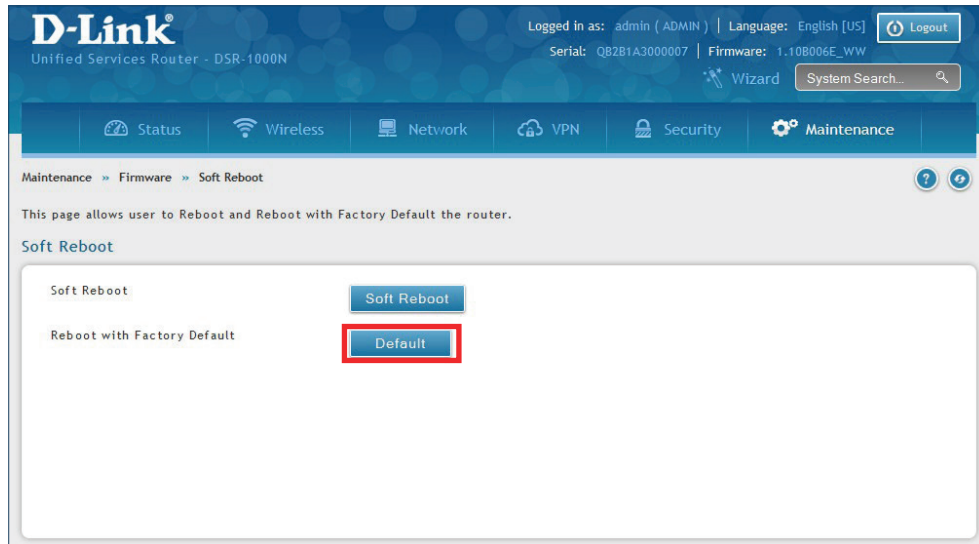

2. Click **Default**. The router will power cycle and reset all settings to the default values.

   Note: *After restoring to the factory default settings, the router's default LAN IP address is 192.168.10.1, the default login user name is 'admin', and the default login password is 'admin'.*

Log Settings

The router allows you capture log messages. You can monitor the type of traffic that goes through the router and be notified of potential attacks or errors when they are detected by the controller. The following sections describe the log configuration settings and the ways you can access these logs.

Defining What to Log

Path: Maintenance > Logs Settings > Log Facilities

The Facility Logs page lets you determine the granularity of logs to receive from the wireless controller. Select one of the following facilities:

- **Kernel**: The Linux kernel. Log messages that correspond to this facility would correspond to traffic through the firewall or network stack.
- **System**: Application and management-level features available on this router for managing the unit.
- **Local1-UTM**: This facility corresponds to IPS (Intrusion Prevention System) which helps in detecting malicious intrusion attempts from the WAN.
- **Local0-Wireless**: This facility corresponds to the 802.11 driver used for providing AP functionality to your network.

1. Click **Maintenance** > **Log Settings** > **Log Facilities**.

2. Select the facility and then toggle **ON** which events you want to log and click **Save**.

For each facility, the following events (in order of severity) can be logged:
- **Emergency:** system is unusable
- **Alert:** action must be taken immediately
- **Critical:** critical conditions
- **Error:** error conditions
- **Warning:** warning conditions
- **Notification:** normal but significant condition
- **Information:** informational
- **Debugging:** debug-level messages

When a particular severity level is selected, all events with severity equal to and greater than the chosen severity are captured. For example if you have configured CRITICAL level logging for the Wireless facility, then 802.11 logs with severities CRITICAL, ALERT, and EMERGENCY are logged.

The display for logging can be customized based on whether the logs are sent to the Event Log viewer in the web management interface (the Event Log viewer is in the Status > System Information > All Logs > Current Logs) or a remote Syslog server for later review. E-mail logs, discussed in a subsequent section, follow the same configuration as logs configured for a Syslog server.

Routing Logs

Path: Maintenance > Logs Settings > Routing Logs

Traffic can be tracked based on whether the packet was accepted or dropped by the firewall. Denial of service attacks, general attack information, login attempts, dropped packets, and similar events can be captured for review.

Note: *Enabling logging options may generate a significant volume of log messages and is recommended for debugging purposes only.*

Traffic through each network segment (LAN, WAN, DMZ) can be tracked based on whether the packet was accepted or dropped by the firewall.

Accepted Packets are those that were successfully transferred through the corresponding network segment (i.e., LAN to WAN). This option is particularly useful when the Default Outbound Policy is "Block Always" so you can monitor traffic that is passed through the firewall.

Dropped Packets are packets that were intentionally blocked from being transferred through the corresponding network segment. This option is useful when the Default Outbound Policy is "Allow Always".

1. Click **Maintenance** > **Log Settings** > **Routing Logs**.
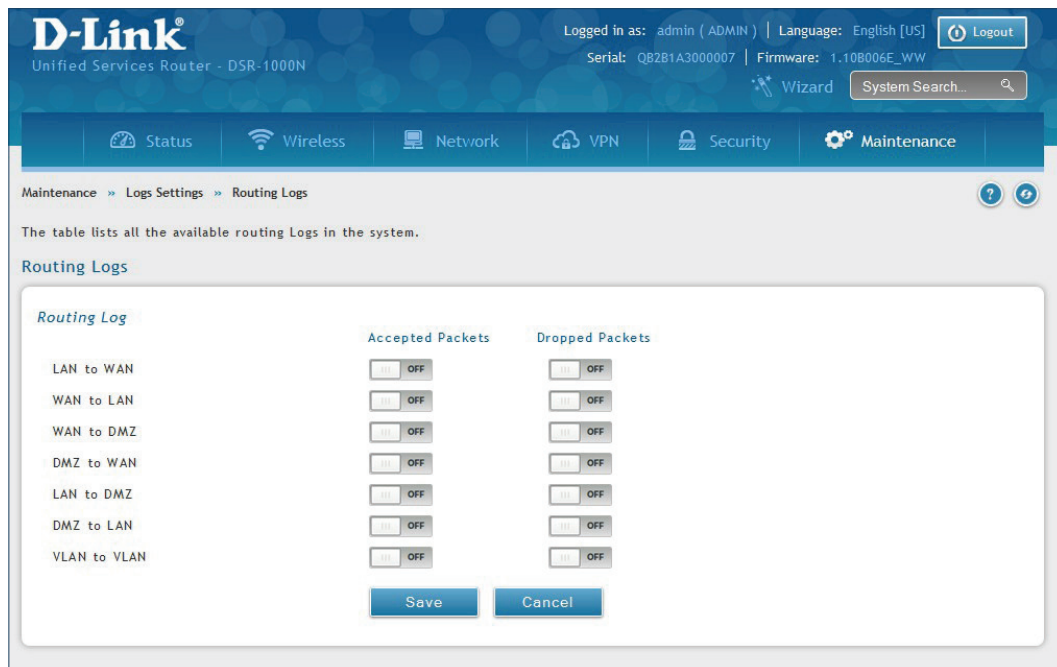

2. Toggle which events you want to log to **ON** and click **Save**.

System Logs

Path: Maintenance > Logs Settings > System Logs

In addition to network segment logging, unicast and multicast traffic can be logged. Unicast packets have a single destination on the network, whereas broadcast (or multicast) packets are sent to all possible destinations simultaneously. One other useful log control is to log packets that are dropped due to configured bandwidth profiles over a particular interface. This data will indicate to the admin whether the bandwidth profile has to be modified to account for the desired internet traffic of LAN users.

1. Click **Maintenance** > **Log Settings** > **System Logs**.
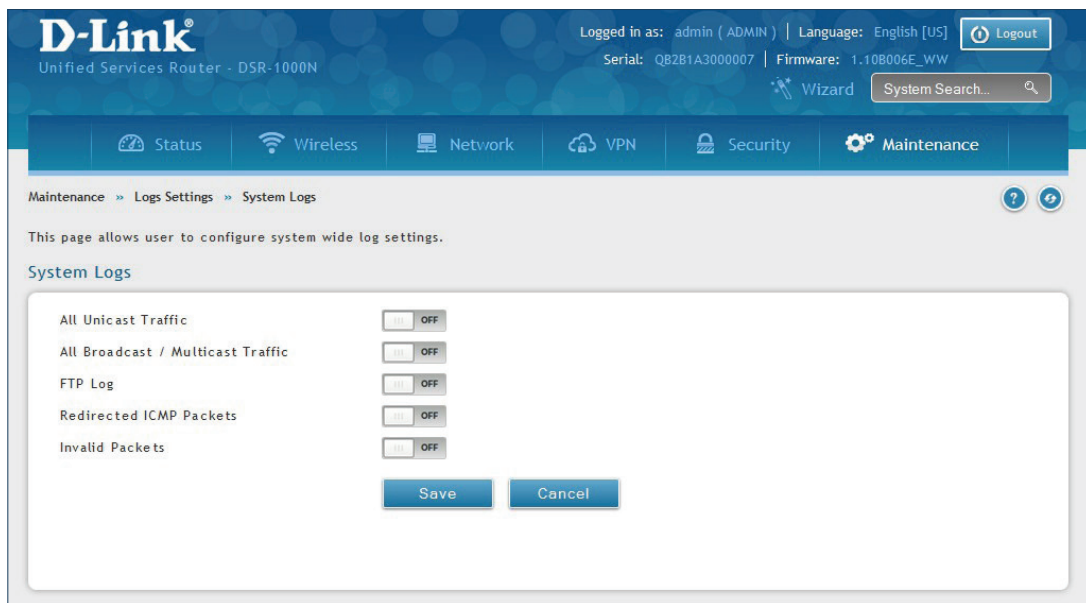

2. Toggle which events you want to log to **ON** and click **Save**.

Remote Logs

Path: Maintenance > Logs Settings > Remote Logs

Once you have configured the type of logs that you want the router to collect, they can be sent to either a Syslog server or an E-Mail address. For remote logging a key configuration field is the Remote Log Identifier. Every logged message will contain the configured prefix of the Remote Log Identifier, so that syslog servers or email addresses that receive logs from more than one router can sort for the relevant device's logs.

Once you enable the option to e-mail logs, enter the e-mail server's address (IP address or FQDN) of the SMTP server. The router will connect to this server when sending e-mails out to the configured addresses. The SMTP port and return e-mail addresses are required fields to allow the router to package the logs and send a valid e-mail that is accepted by one of the configured "send-to" addresses. Up to three e-mail addresses can be configured as log recipients.

In order to establish a connection with the configured SMTP port and server, define the server's authentication requirements. The router supports Login Plain (no encryption) or CRAM-MD5 (encrypted) for the username and password data to be sent to the SMTP server. Authentication can be disabled if the server does not have this requirement. In some cases the SMTP server may send out IDENT requests, and this router can have this response option enabled as needed.

Once the e-mail server and recipient details are defined you can determine when the router should send out logs. E-mail logs can be sent out based on a defined schedule by first choosing the unit (i.e., the frequency) of sending logs: Hourly, Daily, or Weekly. Selecting Never will disable log e-mails but will preserve the e-mail server settings.

1. Click **Maintenance** > **Log Settings** > **Remote Logs**.

2. Complete the fields from the table on the next page and click **Save**.

Field	Description
Remote Log Identifier	Enter a prefix used to identify the source of the message. This identifier is prefixed to both e-mail and Syslog messages.
E-Mail Log	Toggle to **ON** to enable E-Mail logs.
E-Mail Server Address	Enter the IP address or network address of the SMTP server. The router will connect to this server to send e-mail logs when required. The SMTP server must be operational for e-mail notifications to be received.
SMTP Port	Enter the SMTP port of the e-mail server.
Return E-Mail Address	Enter the e-mail address where replies from the SMTP server are to be sent (required for failure messages).
Send to E-Mail Address (1-3)	Enter up to three e-mail addresses where logs and alerts are to be sent.
Authentication with SMTP	Select an authentication if the SMTP server requires authentication before accepting connections. Choices are: • **None:** No authentication is used. The User Name and Password fields are not available. • **Login Plain:** Authentication used to log in using Base64-encoded passwords over non-encrypted communication session. Base64-encoded passwords offer no cryptographic protection, making them vulnerable. • **CRAM-MD5:** A challenge-response authentication mechanism defined in RFC 2195 based on the HMAC-MD5 MAC algorithm. CRAM-MD5 offers a higher level of authentication than Login Plain.
User Name	If *Authentication with SMTP* is set to Login Plain or CRAM-MD5, enter the user name to be used for authentication.
Password	If *Authentication with SMTP* is set to Login Plain or CRAM-MD5, enter the case-sensitive password to be used for authentication.
Respond to identd from SMTP	Toggle to **ON** to have the router respond to IDENT requests from the SMTP server.
Unit	Select the period of time that you need to send the log. This option is useful when you do not want to receive logs by e-mail, but want to keep e-mail options configured, so you can use the Send Log function Event Log viewer pages. Choices are: • **Never:** Disable sending of logs. • **Hourly:** Send logs every hour. • **Daily:** Send logs every day at the Time specified. • **Weekly:** Send logs weekly, at the Day and Time specified.
Day	If Unit is set to Weekly, select the day of the week when logs will be sent.
Time	If Unit is set to Daily or Weekly, select the time when logs will be sent.
Save	Click to save and activate your settings.

Syslog Server

Path: Maintenance > Logs Settings > Syslog Server

An external Syslog server is often used to collect and store logs from the router. This remote device typically has less memory constraints than the local Event Viewer on the router. Therefore, a number of logs can be collected over a sustained period. This is useful for debugging network issues or to monitor router traffic over a long duration.

The router supports eight concurrent Syslog servers. Each server can be configured to receive different log facility messages of varying severity using the Remote Logs page. This page also lets you send configuration logs to three email recipients.

1. Click **Maintenance** > **Log Settings** > **Syslog Server**.

2. Complete the fields from the table on the next page and click **Save**.

Field	Description
Syslog Server 1	Toggle to **ON** to setup a Syslog server.
FQDN / IP Address	Enter the IP address or Internet Name of the Syslog server.
Facility	Select which facility you want to log. Refer to "Defining What to Log" on page 193 for definitions.
Severity	Select the severity level you want to log. Refer to "Defining What to Log" on page 193 for definitions.
Syslog Server 2-8	Toggle to **ON** to setup another Syslog server. Repeat the fields above for each server you want to setup.
Save	Click to save and activate your settings.

Event Logs

Path: Maintenance > Logs Settings > Event Logs

The router's web management interface displays configured log messages from the Status menu. When traffic through or to the router matches settings in the Facility Logs page or Routing Logs page, the corresponding log message will appear in this window with a timestamp.

1. Click **Maintenance** > **Log Settings** > **Event Logs**.
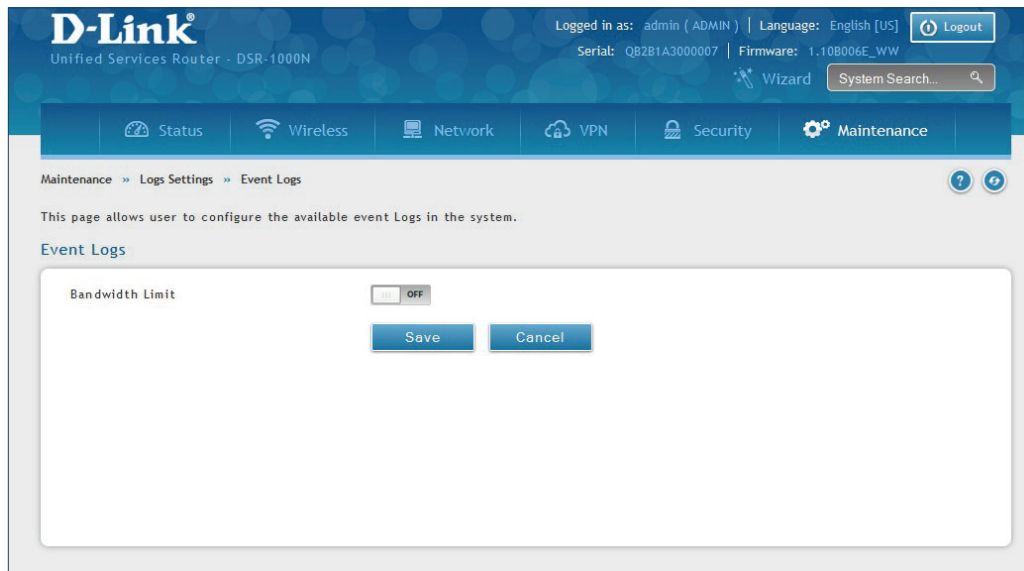

2. Toggle to **ON** and click **Save**.

IPv6 Logs

Path: Maintenance > Logs Settings > IPv6 Logs

This page allows you to configure what IPv6 events you want to log.

1. Click **Maintenance** > **Log Settings** > **IPv6 Logs**.
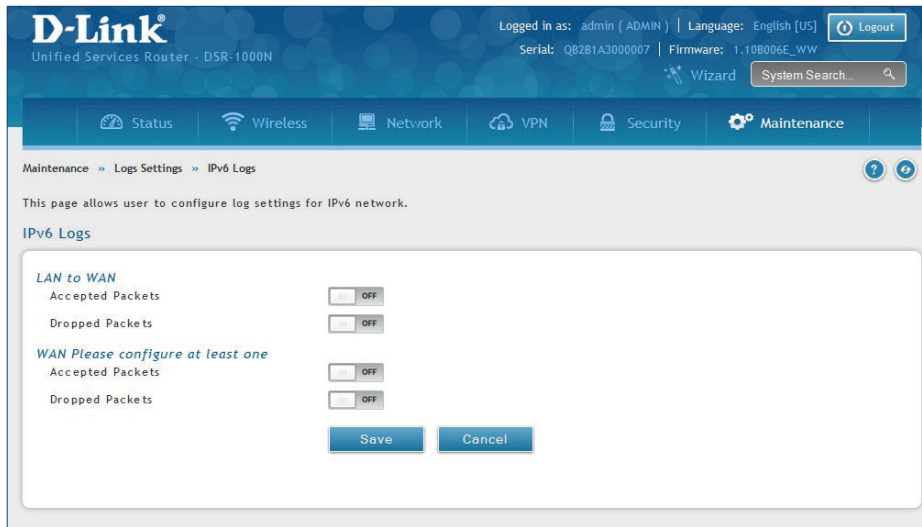

2. Complete the fields from the table below and click **Save**.

Field	Description
LAN to WAN	
Accepted Packets	Toggle to **ON** to log accepted packets.
Dropped Packets	Toggle to **ON** to log dropped packets.
WAN	
Accepted Packets	Toggle to **ON** to log accepted packets.
Dropped Packets	Toggle to **ON** to log dropped packets.
Save	Click to save and activate your settings.
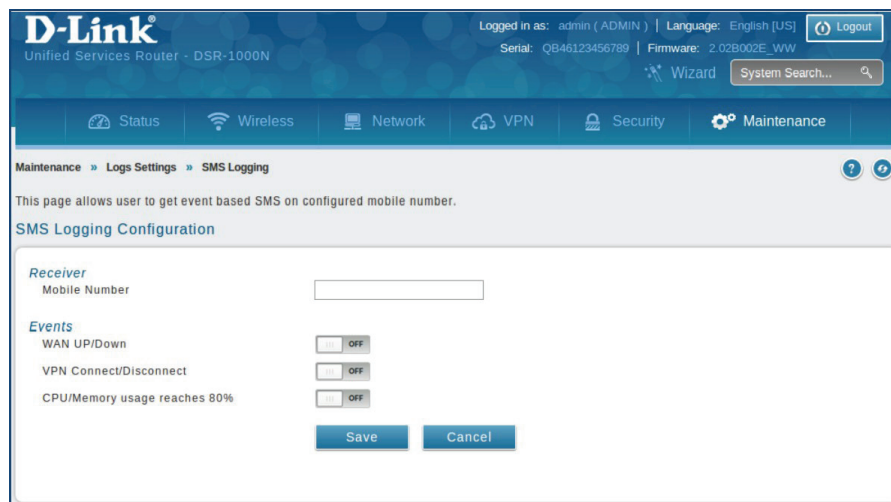

SMS Logging

Path: Maintenance > Logs Settings > SMS logging
This page allows the user to get events based SMS on configured mobile number.

1. Click Maintenance > Log Settings >SMS logging
2. Enter the phone number and toggle On for events from the table below
3. Click Save

Field	Description
Mobile Number	Enter a valid mobile number to receive SMS message
WAN Up/Down	Toggle to On to receive SMS based on WAN UP/Down event.
VPN Connect/Disconnect	Toggle to On to receive SMS whenever VPN tunnel connects or disconnects.
CPU/Memory usage reaches 80%	Toggle to On to receive SMS whenever CPU/Memory utilization reaches to 80%.

Status and Statistics
Dashboard

Path: Status > Dashboard

The router provides a dashboard that displays about the resources the system is using. The dashboard page is organized into the following sections:
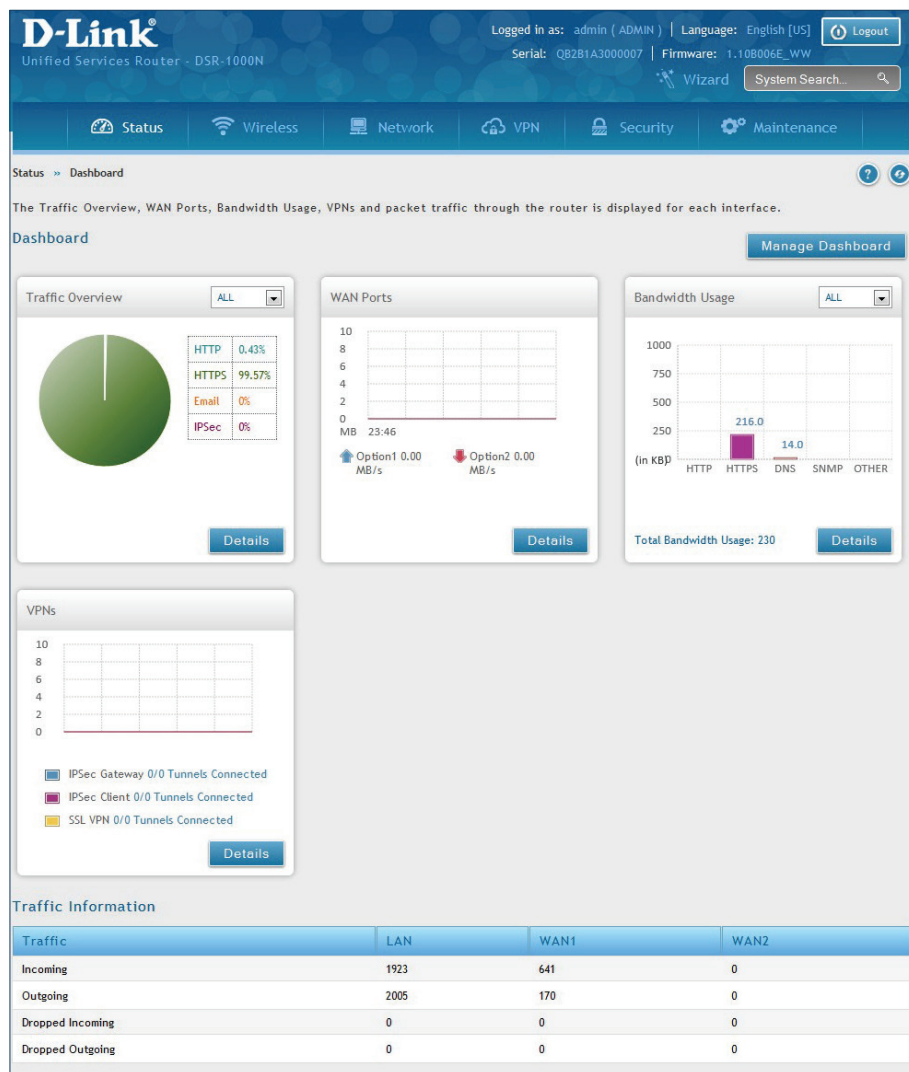

Field	Description
Traffic Overview	Displays a chart of traffic overview by service for each interface.
WAN Ports	Displays a chart of traffic overview by bandwidth and packet information for WAN traffic.
Bandwidth Usage	Displays bandwidth usage by network segment such as WAN or LAN. The data is broken into by applications service such as HTTP, HTTPS, DNS, SNMP, and others.
VPNs	Displays a chart of VPN traffic by bandwidth and number of tunnels.
Traffic Information	Displays a grid of traffic statistics for each interface.

Manage Dashboard

To manage the dashboard:
1. Click on the **Manage Dashboard** button.
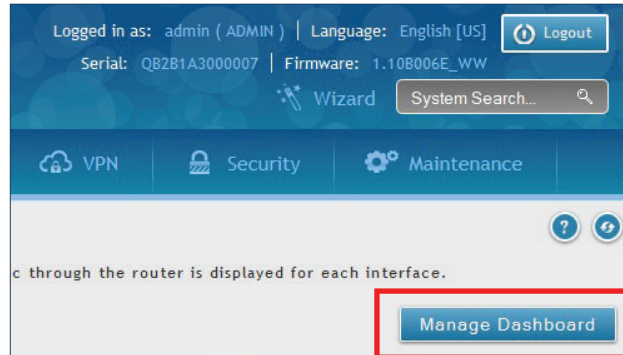

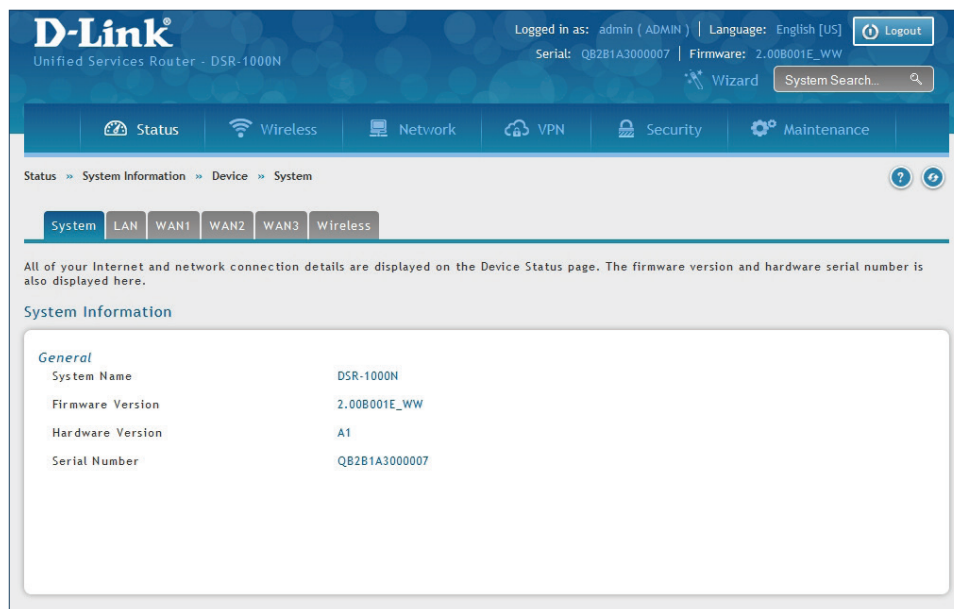

2. The following window will pop out and allow you to enable or disable the overview panels shown on the dashboard. Toggle the panel to **ON** or **OFF** and click **Save**.
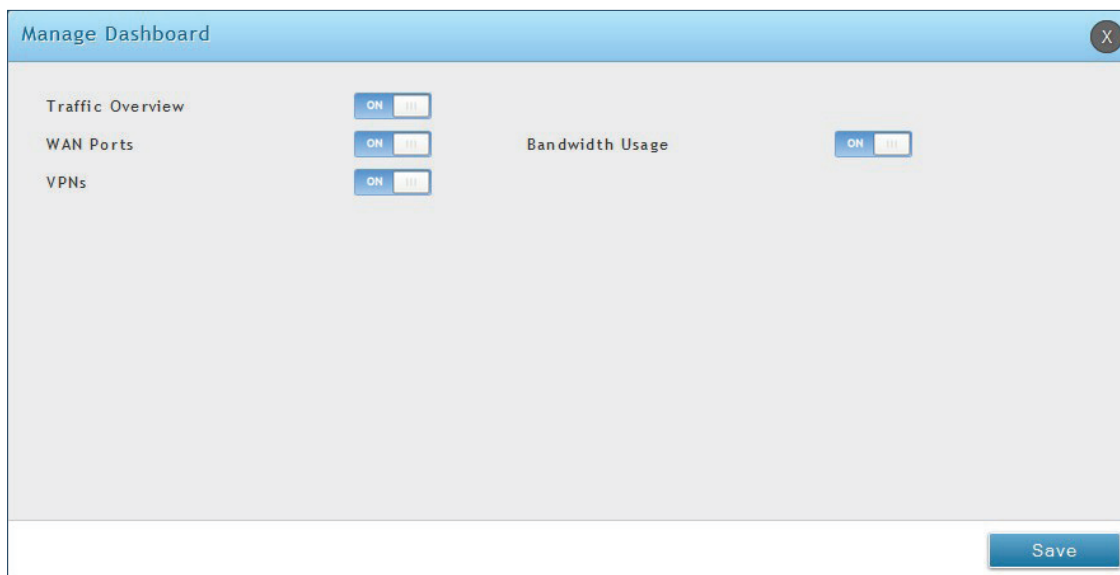

System

Path: Status > System Information > Device > System

The System Info page displays the current system name, firmware version, hardware version, and serial number.

LAN Info

Path: Status > System Information > Device > LAN

The LAN Information page summarizes the LAN settings including MAC address, IP address, and link state.

WAN1

Path: Status > System Information > Device > WAN1

The WAN1 Information page summarizes the WAN1 port settings.

WAN2

Path: Status > System Information > Device > WAN2

The WAN2 Information page summarizes the WAN2 port settings.

WAN3

Path: Status > System Information > Device > WAN3

The WAN3 Information page summarizes the WAN3 settings.

Wireless

Path: Status > System Information > Device > Wireless

The Wireless Information page displays traffic statistics for each enabled access point. This page will give a snapshot of how much traffic is being transmitted over each wireless link.
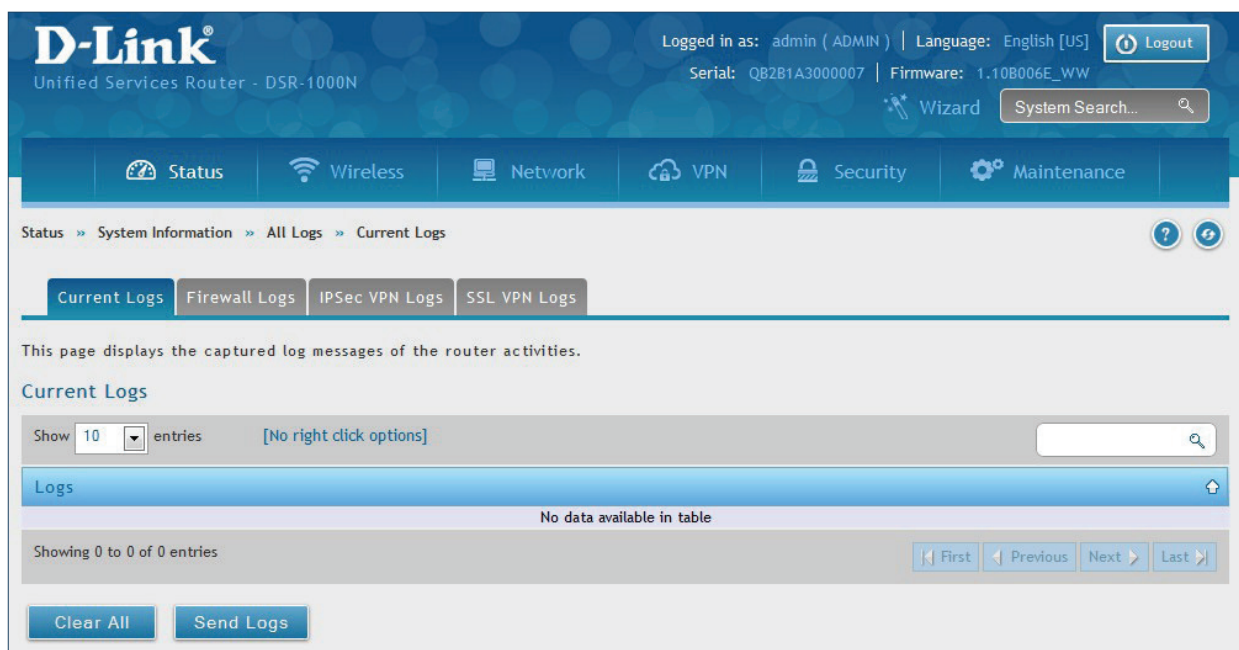

All Logs
Current Logs

Path: Status > System Information > All Logs > Current Logs

The Current Logs window displays configured log messages from the router as they appear. Each log will appear with a timestamp as determined by the router's configured time. If remote logging such as a Syslog server or e-mail logging is configured, the same logs are sent to the remote interface while being displayed here.

Click **Clear All** to remove all entries in the Display Logs screen or click **Send Logs** to send all logs in the Current Logs screen to preconfigured e-mail recipients.

Firewall Logs

Path: Status > System Information > All Logs > Firewall Logs

The Firewall Logs window displays configured firewall event messages from the router as they appear. Each log will appear with a timestamp as determined by the router's configured time.

Click **Clear All** to remove all entries in the Display Logs screen or click **Send Logs** to send all logs in the Current Logs screen to preconfigured e-mail recipients.
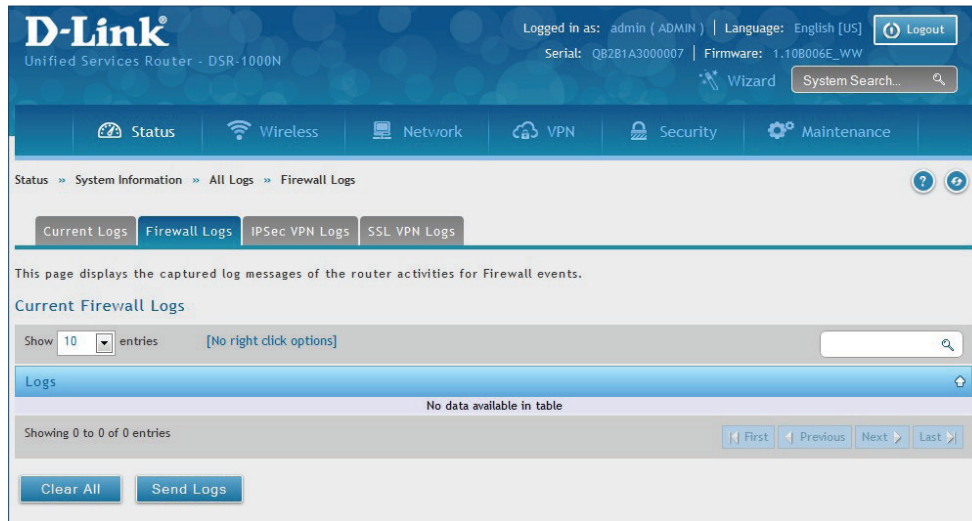

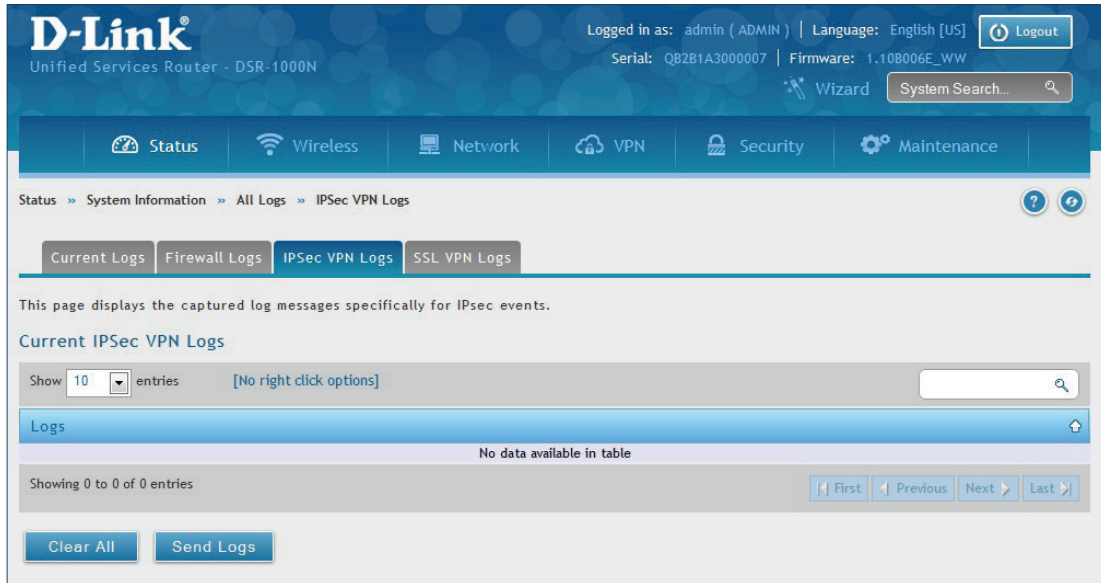

IPSec VPN Logs

Path: Status > System Information > All Logs > IPSec VPN Logs

The IPSec VPN Logs window displays IPSec VPN event messages from the router as they appear. Each log will appear with a timestamp as determined by the router's configured time.

Click **Clear All** to remove all entries in the Display Logs screen or click **Send Logs** to send all logs in the Current Logs screen to preconfigured e-mail recipients.

SSL VPN Logs

Path: Status > System Information > All Logs > SSL VPN Logs

The SSL VPN Logs window displays SSL VPN event messages from the router as they appear. Each log will appear with a timestamp as determined by the router's configured time.
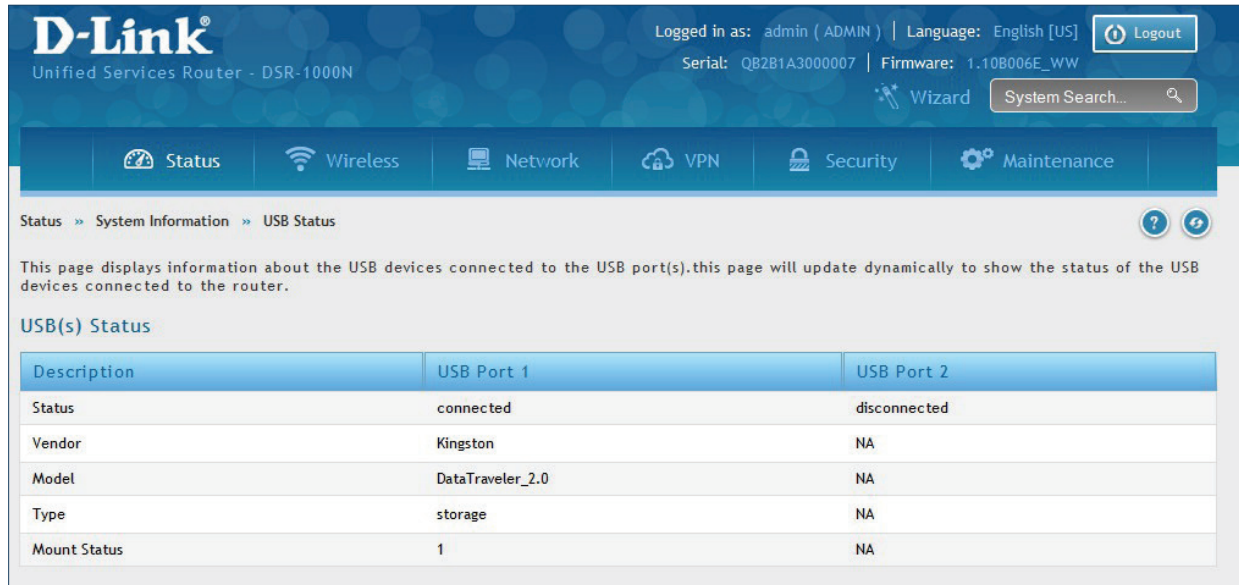

Click **Clear All** to remove all entries in the Display Logs screen or click **Send Logs** to send all logs in the Current Logs screen to preconfigured e-mail recipients.
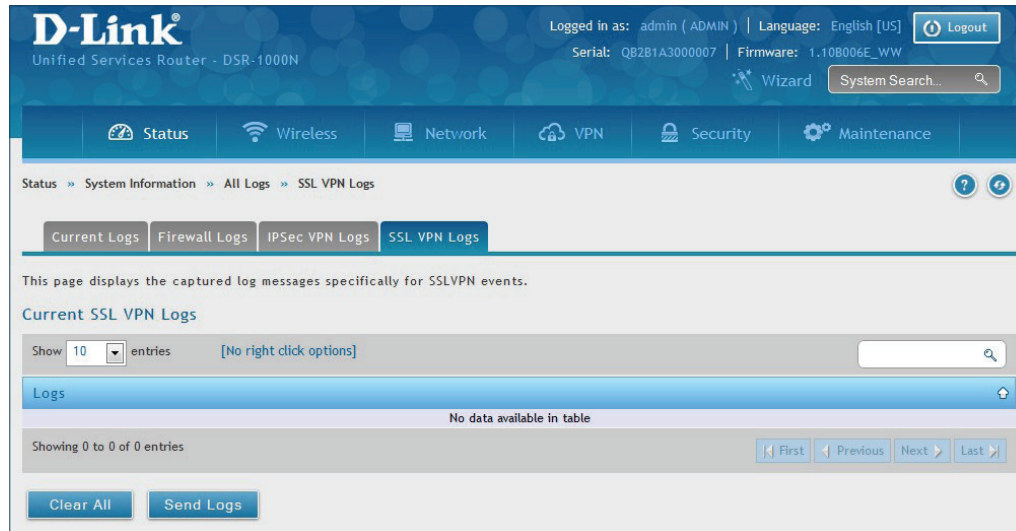

USB Status

Path: Status > System Information > USB Status

The USB Status page summarizes the USB devices connected to the router. You may connect USB printer and USB storage device directly to the router.

Network Information
DHCP Leased Clients

Path: Status > Network Information > DHCP Clients

Three separated tabs display a list of clients whom get IP leased from the router: LAN leased clients, IPv6 leased clients, and DMZ leased clients.
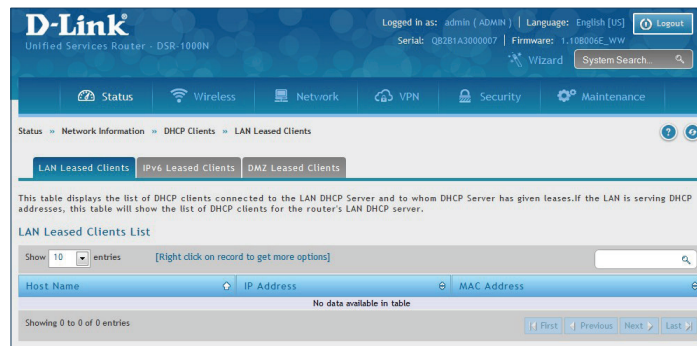

LAN Leased Clients
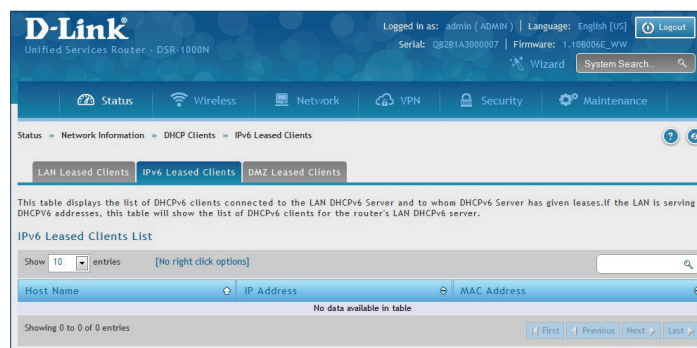

IPv6 Leased Clients
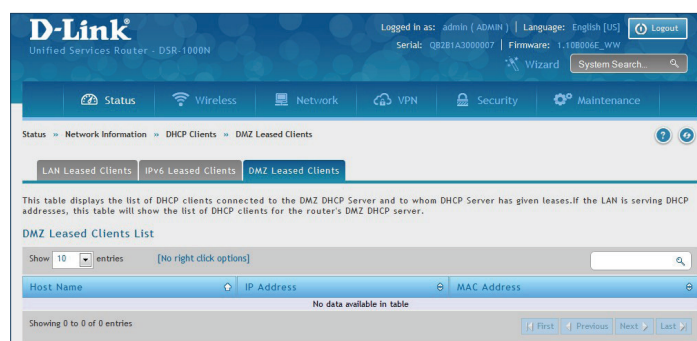

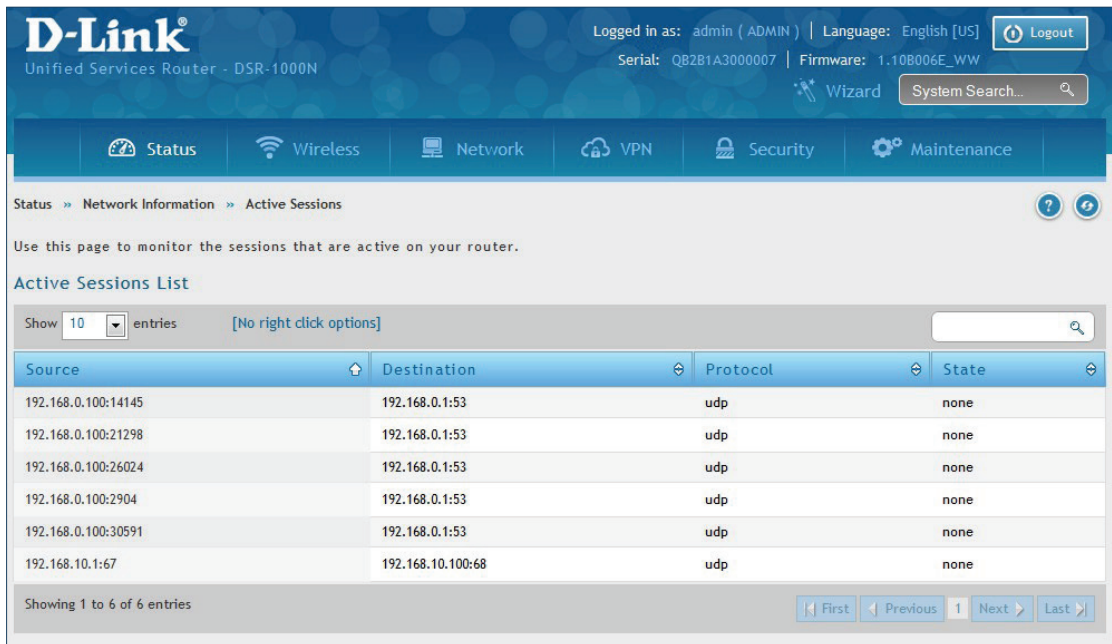

DMZ Leased Clients

Active Sessions

Path: Status > Network Information > Active Sessions

This table lists the active internet sessions through the router's firewall. The session's protocol, state, local, and remote IP addresses are shown.

Active VPNs

Path: Status > Network Information > Active VPNs

You can view and change the status (connect or drop) of the router's VPN associations/connections. Here, the active VPN associations/connections are listed along with the traffic details and tunnel state. The traffic is a cumulative measure of transmitted/received packets since the tunnel was established.
IPSec SAs
SSL VPN Connections
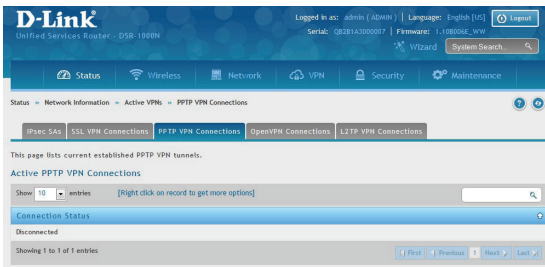

PPTP VPN Connections
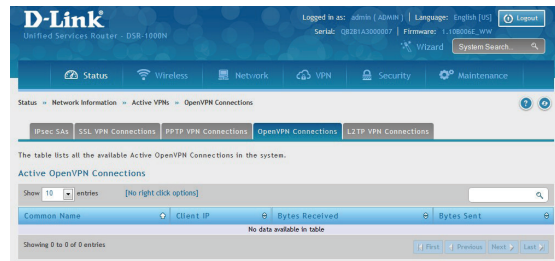

OpenVPN Connections
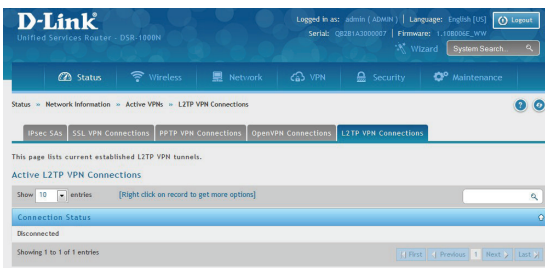

L2TP VPN Connections

Interface Statistics

Path: Status > Network Information > Interfaces Statistics

This page displays packet information on the LAN, VLAN, and WLAN interfaces.

View Wireless Clients

Path: Status > Network Information > Wireless Clients

The clients connected to a particular AP can be viewed on this page. Connected clients are sorted by the MAC address and indicate the security parameters used by the wireless link, as well as the time connected to the corresponding AP. The statistics table has auto-refresh control which allows display of the most current port level data at each page refresh. The default auto-refresh for this page is 10 seconds.

Device Stats

Path: Status > Network Information > Device Stats

Detailed transmit and receive statistics for each physical port are presented here. Each interface (WAN1, WAN2/ DMZ, LAN, and VLANs) have port specific packet level information provided for review. Transmitted/received packets, port collisions, and the cumulating bytes/sec for transmit/receive directions are provided for each interface along with the port up time. If you suspect issues with any of the wired ports, this table will help diagnose uptime or transmit level issues with the port.

The statistics table has auto-refresh control which allows display of the most current port level data at each page refresh. The default auto-refresh for this page is 10 seconds.

Wireless Statistics

Path: Status > Network Information > Wireless Statistics

The Wireless Statistics page displays the incrementing traffic statistics for each enabled access point. This page will give a snapshot of how much traffic is being transmitted over each wireless link. If you suspect that a radio or VAP may be down, the details on this page would confirm if traffic is being sent and received through the VAP.
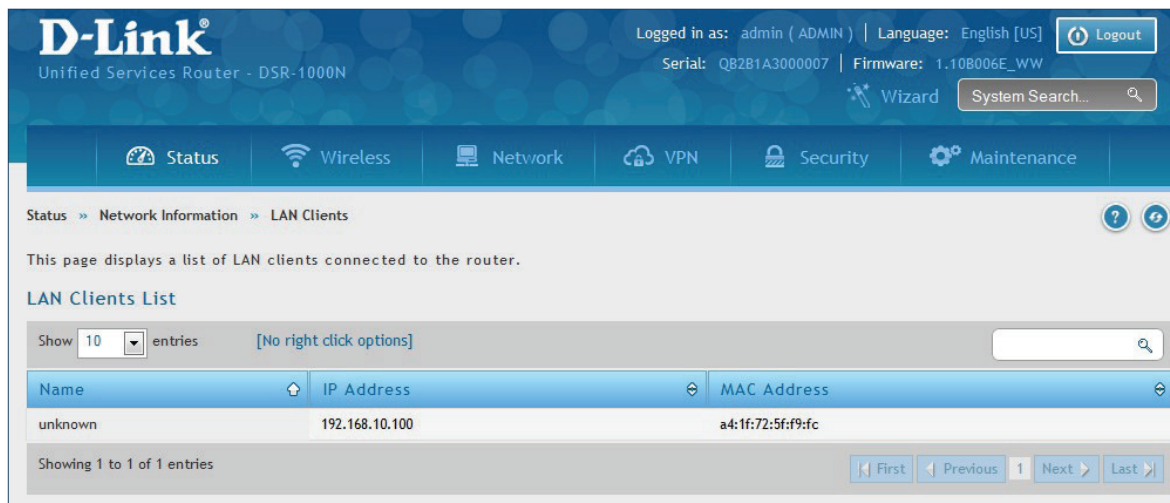

View LAN Clients

Path: Status > Network Information > LAN Clients

The LAN clients to the router are identified by an ARP scan through the LAN switch. The NetBIOS name (if available), IP address, and MAC address of discovered LAN hosts are displayed.

Troubleshooting

Internet Connection

Symptom: You cannot access the router's web-configuration interface from a PC on your LAN.

Recommended action:
1. Check the Ethernet connection between the PC and the router.
2. Ensure that your PC's IP address is on the same subnet as the router. If you are using the recommended addressing scheme, your PC's address should be in the range 192.168.10.2 to 192.168.10.254.
3. Check your PC's IP address. If the PC cannot reach a DHCP server, some versions of Windows and Mac OS generate and assign an IP address. These auto-generated addresses are in the range 169.254.x.x. If your IP address is in this range, check the connection from the PC to the firewall and reboot your PC.
4. If your router's IP address has changed and you don't know what it is, reset the router configuration to factory defaults (this sets the firewall's IP address to 192.168.10.1).
5. If you do not want to reset to factory default settings and lose your configuration, reboot the router and use a packet sniffer (such as Ethereal™) to capture packets sent during the reboot. Look at the Address Resolution Protocol (ARP) packets to locate the router's LAN interface address.
6. Launch your browser and ensure that Java, JavaScript, or ActiveX is enabled. If you are using Internet Explorer, click **Refresh** to ensure that the Java applet is loaded. Close the browser and launch it again.
7. Ensure that you are using the correct login information. The factory default login name is admin and the password is password. Ensure that CAPS LOCK is off when entering this information.

Symptom: Router does not save configuration changes.

Recommended action:
1. When entering configuration settings, click **Apply** before moving to another menu or tab; otherwise your changes are lost.
2. Click **Refresh** or **Reload** in the browser. Your changes may have been made, but the browser may be caching the old configuration.

Symptom: Router cannot access the Internet.

Possible cause: If you use dynamic IP addresses, your router may not have requested an IP address from the ISP.

Recommended action:
1. Launch your browser and go to an external site such as www.google.com.
2. Access the firewall's configuration main menu at http://192.168.10.1.
3. Select Monitoring > Router Status.
4. Ensure that an IP address is shown for the WAN port. If 0.0.0.0 is shown, your firewall has not obtained an IP address from your ISP. See the next symptom.

Symptom: Router cannot obtain an IP address from the ISP.

Recommended action:
1. Turn off power to the cable or DSL modem.
2. Turn off the router.
3. Wait five minutes, and then reapply power to the cable or DSL modem.
4. When the modem LEDs indicate that it has resynchronized with the ISP, reapply power to the router. If the router still cannot obtain an ISP address, see the next symptom.

Symptom: Router still cannot obtain an IP address from the ISP.

Recommended action:
1. Ask your ISP if it requires a login program — PPP over Ethernet (PPPoE) or some other type of login.
2. If yes, verify that your configured login name and password are correct.
3. Ask your ISP if it checks for your PC's hostname.
4. If yes, select Network Configuration > WAN Settings > Ethernet ISP Settings and set the account name to the PC hostname of your ISP account.
5. Ask your ISP if it allows only one Ethernet MAC address to connect to the Internet, and therefore checks for your PC's MAC address.
6. If yes, inform your ISP that you have bought a new network device, and ask them to use the firewall's MAC address.
7. Alternatively, select Network Configuration > WAN Settings > Ethernet ISP Settings and configure your router to spoof your PC's MAC address.

Symptom: Router can obtain an IP address, but PC is unable to load Internet pages.

Recommended action:
1. Ask your ISP for the addresses of its designated Domain Name System (DNS) servers. Configure your PC to recognize those addresses. For details, see your operating system documentation.
2. On your PC, configure the router to be its TCP/IP gateway.

Date and time

Symptom: Date shown is January 1, 1970.

Possible cause: The router has not yet successfully reached a network time server (NTS).

Recommended action:
1. If you have just configured the router, wait at least five minutes, select Administration > Time Zone, and recheck the date and time.
2. Verify your Internet access settings.

Symptom: Time is off by one hour.

Possible cause: The router does not automatically adjust for Daylight Savings Time.

Recommended action:
1. Select Administration > Time Zone and view the current date and time settings.
2. Click to check or uncheck "Automatically adjust for Daylight Savings Time", then click **Apply**.

Pinging to Test LAN Connectivity

Most TCP/IP terminal devices and firewalls contain a ping utility that sends an ICMP echo-request packet to the designated device. The DSR responds with an echo reply. Troubleshooting a TCP/IP network is made very easy by using the ping utility in your PC or workstation.

Testing the LAN path from your PC to your router

1. From the PC's Windows toolbar, Click **Start** and in the search box at the bottom, type **cmd** and press **Enter**.
2. At the prompt, type **ping <IP_address>** where <IP_address> is the router's IP address. Example: ping 192.168.10.1.
3. Press **Enter**.
4. Observe the display:
    - If the path is working, you will see this message sequence:

        Pinging <IP address> with 32 bytes of data
        Reply from <IP address>: bytes=32 time=NN ms TTL=xxx

    - If the path is not working, you will see this message sequence:

        Pinging <IP address> with 32 bytes of data
        Request timed out

5. If the path is not working, Test the physical connections between PC and router:
    - If the LAN port LED is off, go to the "LED displays" section on your Install Guide and follow instructions for "LAN or Internet port LEDs are not lit."
    - Verify that the corresponding link LEDs are lit for your network interface card and for any hub ports that are connected to your workstation and firewall.

6. If the path is still not up, test the network configuration:
    - Verify that the Ethernet card driver software and TCP/IP software are installed and configured on the PC.
    - Verify that the IP address for the router and PC are correct and on the same subnet.

Testing the LAN path from your PC to a remote device

1. From the PC's Windows toolbar, Click **Start** and in the search box at the bottom, type **cmd** and press **Enter**.
2. Type **ping -n 10 <IP_address>** where -n 10 specifies a maximum of 10 tries and <IP address> is the IP address of a remote device such as your ISP's DNS server. Example: ping -n 10 10.1.1.1.
3. Press **Enter** and then observe the display (see the previous procedure).
4. If the path is not working, do the following:
    *   Check that the PC has the IP address of your firewall listed as the default gateway. (If the IP configuration of your PC is assigned by DHCP, this information is not visible in your PC's Network Control Panel.)
    *   Verify that the network (subnet) address of your PC is different from the network address of the remote device.
    *   Verify that the cable or DSL modem is connected and functioning.
    *   Ask your ISP if it assigned a hostname to your PC. If yes, select Network Configuration > WAN Settings > Ethernet ISP Settings and enter that hostname as the ISP account name.
    *   Ask your ISP if it rejects the Ethernet MAC addresses of all but one of your PCs.

Many broadband ISPs restrict access by allowing traffic from the MAC address of only your broadband modem; but some ISPs additionally restrict access to the MAC address of just a single PC connected to that modem. If this is the case, configure your firewall to clone or spoof the MAC address from the authorized PC.

Restoring factory-default configuration settings

To restore factory-default configuration settings, do either of the following:
1. Do you know the account password and IP address?
    - If yes, select Maintenance > Firmware & Config > Soft Reboot and click Default.
    - If no, do the following:

        On the rear panel of the router, press and hold the Reset button about 10 seconds, until the test LED lights and then blinks. Release the button and wait for the router to reboot.
2. If the router does not restart automatically; manually restart it to make the default settings effective.
3. After a restore to factory defaults —whether initiated from the configuration interface or the Reset button — the following settings apply:
    - LAN IP address: 192.168.10.1
    - Username: admin
    - Password: admin
    - DHCP server on LAN: enabled
    - WAN port configuration: Get configuration via DHCP

Appendix A - Glossary

ARP	Address Resolution Protocol. Broadcast protocol for mapping IP addresses to MAC addresses.
CHAP	Challenge-Handshake Authentication Protocol. Protocol for authenticating users to an ISP.
DDNS	Dynamic DNS. System for updating domain names in real time. Allows a domain name to be assigned to a device with a dynamic IP address.
DHCP	Dynamic Host Configuration Protocol. Protocol for allocating IP addresses dynamically so that addresses can be reused when hosts no longer need them.
DNS	Domain Name System. Mechanism for translating H.323 IDs, URLs, or e-mail IDs into IP addresses. Also used to assist in locating remote gatekeepers and to map IP addresses to hostnames of administrative domains.
FQDN	Fully qualified domain name. Complete domain name, including the host portion. Example: serverA.companyA.com.
FTP	File Transfer Protocol. Protocol for transferring files between network nodes.
HTTP	Hypertext Transfer Protocol. Protocol used by web browsers and web servers to transfer files.
IKE	Internet Key Exchange. Mode for securely exchanging encryption keys in ISAKMP as part of building a VPN tunnel.
IPsec	IP security. Suite of protocols for securing VPN tunnels by authenticating or encrypting IP packets in a data stream. IPsec operates in either transport mode (encrypts payload but not packet headers) or tunnel mode (encrypts both payload and packet headers).
ISAKMP	Internet Key Exchange Security Protocol. Protocol for establishing security associations and cryptographic keys on the Internet.
ISP	Internet service provider.
MAC Address	Media-access-control address. Unique physical-address identifier attached to a network adapter.
MTU	Maximum transmission unit. Size, in bytes, of the largest packet that can be passed on. The MTU for Ethernet is a 1500-byte packet.
NAT	Network Address Translation. Process of rewriting IP addresses as a packet passes through a router or firewall. NAT enables multiple hosts on a LAN to access the Internet using the single public IP address of the LAN's gateway router.
NetBIOS	Microsoft Windows protocol for file sharing, printer sharing, messaging, authentication, and name resolution.
NTP	Network Time Protocol. Protocol for synchronizing a router to a single clock on the network, known as the clock master.
PAP	Password Authentication Protocol. Protocol for authenticating users to a remote access server or ISP.

PPPoE	Point-to-Point Protocol over Ethernet. Protocol for connecting a network of hosts to an ISP without the ISP having to manage the allocation of IP addresses.
PPTP	Point-to-Point Tunneling Protocol. Protocol for creation of VPNs for the secure transfer of data from remote clients to private servers over the Internet.
RADIUS	Remote Authentication Dial-In User Service. Protocol for remote user authentication and accounting. Provides centralized management of usernames and passwords.
RSA	Rivest-Shamir-Adleman. Public key encryption algorithm.
TCP	Transmission Control Protocol. Protocol for transmitting data over the Internet with guaranteed reliability and in-order delivery.
UDP	User Data Protocol. Protocol for transmitting data over the Internet quickly but with no guarantee of reliability or in-order delivery.
VPN	Virtual private network. Network that enables IP traffic to travel securely over a public TCP/IP network by encrypting all traffic from one network to another. Uses tunneling to encrypt all information at the IP level.
WINS	Windows Internet Name Service. Service for name resolution. Allows clients on different IP subnets to dynamically resolve addresses, register themselves, and browse the network without sending broadcasts.
XAUTH	IKE Extended Authentication. Method, based on the IKE protocol, for authenticating not just devices (which IKE authenticates) but also users. User authentication is performed after device authentication and before IPsec negotiation.

Appendix B - Factory Default Settings

Feature	Description	Default Settings
Device Login	User Login URL	http://192.168.10.1
	User Name	admin
	Password	admin
Internet Connection	WAN MAC Address	Use default address
	WAN MTU size	1500
	Port Speed	Autosense
Local Area Network (LAN)	IP Address	192.168.10.1
	IPv4 Subnet Mask	255.255.255.0
	RIP Direction	None
	RIP Version	Disabled
	RIP Authentication	Disabled
	DHCP Server	Enabled
	DHCP Starting IP Address	192.168.10.2
	DHCP Ending IP Address	192.168.10.100
	Time Zone	GMT
	Daylight Saving Time	Disabled
	SNMP	Disabled
	Remote Management	Disabled
Firewall	Inbound Communication from Internet	Disabled (except Port 80 HTTP)
	Outbound Communication to Internet	Enabled (all)
	Source MAC Filtering	Disabled
	Stealth Mode	Enabled

All Models

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.

- Increase the separation between the equipment and receiver.

- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

- Consult the dealer or an experienced radio/TV technician for help.

Non-modifications Statement:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Caution:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

DSR-500AC/DSR-1000AC

RF Frequency Requirements

This device is for indoor use only when using all channels in the 5.150 - 5.250 GHz, 5.250 - 5.350 GHz, 5.470 - 5.725 GHz, and 5.725 - 5.850 GHz frequency ranges. High power radars are allocated as primary users of the 5.150 - 5.250 GHz, 5.250 - 5.350 GHz, 5.470 - 5.725 GHz, and 5.725 - 5.850 GHz bands. These radar stations can cause interference with and/or damage this device. This device will not operate on channels which overlap the 5600 - 5650 MHz band.

It is restricted to indoor environments only.

DSR-500/DSR-1000/DSR-500AC/DSR-1000AC

Safety Warning:

CAUTION: Risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to the instructions.

ATTENTION: Risque d'explosion si la batterie est remplacée par un type incorrect. Jetezles piles usagées selon les instructions.

DSR-150N/DSR-250N/DSR-500AC/DSR-1000AC

This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with FCC multi-transmitter product procedures. For product available in the USA/Canada market, only channel 1~11 can be operated. Selection of other channels is not possible.

Note

The country code selection is for non-USA models only and is not available to all USA models. Per FCC regulations, all WiFi product marketed in the USA must be fixed to USA operational channels only.

IMPORTANT NOTICE:

FCC Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20 cm between the radiator and your body.

Canada
All Models

Innovation, Science and Economic Development Canada (ISED) Statement:

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

DSR-500AC

Innovation, Science and Economic Development Canada (ISED) Statement:

This device complies with ISED licence-exempt RSS standard(s). Operation is subject to the following two conditions:

(1) this device may not cause interference, and

(2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'ISED applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

(1) l'appareil ne doit pas produire de brouillage, et

(2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

(i) the device for operation in the band 5150-5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems;

(i) les dispositifs fonctionnant dans la bande 5150-5250 MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux;

(ii) for devices with detachable antenna(s), the maximum antenna gain permitted for devices in the bands 5250-5350 MHz and 5470-5725 MHz shall be such that the equipment still complies with the e.i.r.p. limit;

(ii) pour les dispositifs munis d'antennes amovibles, le gain maximal d'antenne permis pour les dispositifs utilisant les bandes de 5250 à 5350 MHz et de 5470 à 5725 MHz doit être conforme à la limite de la p.i.r.e;

(iii) for devices with detachable antenna(s), the maximum antenna gain permitted for devices in the band 5725-5850 MHz shall be such that the equipment still complies with the e.i.r.p. limits specified for point-to-point and non-point-to-point operation as appropriate;

(iii) pour les dispositifs munis d'antennes amovibles, le gain maximal d'antenne permis (pour les dispositifs utilisant la bande de 5725 à 5850 MHz) doit être conforme à la limite de la p.i.r.e. spécifiée pour l'exploitation point à point et l'exploitation non point à point, selon le cas;

Operations in the 5.25-5.35 GHz band are restricted to indoor usage only.

Les opérations dans la bande de 5.25-5.35 GHz sont limités à un usage intérieur seulement.

For transmitters equipped with detachable antennas. This radio transmitter (IC: 4216A-SR500ACA1) has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Le présent émetteur radio (IC: 4216A-SR500ACA1) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

Slovensko[Slovenian]	Podjetje D-Link Corporation s tem izjavlja, da so ta izdelek, dodatna oprema in programska oprema skladni z direktivami 2014/53/EU. Celotno besedilo izjave o skladnosti EU in vdelana programska oprema sta na voljo za prenos na strani izdelka na www.dlink.com.
Slovensky [Slovak]	Spoločnosť D-Link týmto vyhlasuje, že tento produkt, príslušenstvo a softvér sú v súlade so smernicou 214/53/EÚ. Úplné znenie vyhlásenia EÚ o zhode a firmvéri produktu sú k dispozícii na prevzatie zo stránky produktu www.dlink.com.
Suomi [Finnish]	D-Link Corporation täten vakuuttaa, että tämä tuote, lisävarusteet ja ohjelmisto ovat direktiivin 2014/53/EU vaatimusten mukaisia. Täydellinen EU-vaatimustenmukaisuusvakuutus samoin kuin tuotteen laiteohjelmisto ovat ladattavissa osoitteesta www.dlink.com.
Svenska[Swedish]	D-Link Corporation försäkrar härmed att denna produkt, tillbehör och programvara överensstämmer med direktiv 2014/53/EU. Hela texten med EU-försäkran om överensstämmelse och produkt-firmware kan hämtas från produktsidan på www.dlink.com.
Íslenska [Icelandic]	Hér með lýsir D-Link Corporation því yfir að þessi vara, fylgihlutir og hugbúnaður eru í samræmi við tilskipun 2014/53/EB. Sækja má ESB-samræmisyfirlýsinguna í heild sinni og fastbúnað vörunnar af vefsíðu vörunnar á www.dlink.com.
Norsk [Norwegian]	Herved erklærer D-Link Corporation at dette produktet, tilbehøret og programvaren er i samsvar med direktivet 2014/53/EU. Den fullstendige teksten i EU-erklæring om samsvar og produktets fastvare er tilgjengelig for nedlasting fra produktsiden på www.dlink.com.

Warning Statement:

The power outlet should be near the device and easily accessible.

NOTICE OF WIRELESS RADIO LAN USAGE IN THE EUROPEAN COMMUNITY (FOR WIRELESS PRODUCT ONLY):

- This device is restricted to indoor use when operated in the European Community using channels in the 5.15-5.35 GHz band to reduce the potential for interference.

- This device is a 2.4 GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries. This equipment may be operated in AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, and CY.

Usage Notes:

- To remain in conformance with European National spectrum usage regulations, frequency and channel limitations will be applied on the products according to the country where the equipment will be deployed.

- This device is restricted from functioning in Ad-hoc mode while operating in 5 GHz. Ad-hoc mode is direct peer-to-peer communication between two client devices without an Access Point.

- Access points will support DFS (Dynamic Frequency Selection) and TPC (Transmit Power Control) functionality as required when operating in 5 GHz band within the EU.

- Please refer to the product manual or datasheet to check whether your product uses 2.4 GHz and/or 5 GHz wireless.

HINWEIS ZUR VERWENDUNG VON DRAHTLOS-NETZWERK (WLAN) IN DER EUROPÄISCHEN GEMEINSCHAFT (NUR FÜR EIN DRAHTLOSES PRODUKT)

- Der Betrieb dieses Geräts in der Europäischen Gemeinschaft bei Nutzung von Kanälen im 5,15-5,35 GHz Frequenzband ist ausschließlich auf Innenräume beschränkt, um das Interferenzpotential zu reduzieren.

- Bei diesem Gerät handelt es sich um ein zum Einsatz in allen EU-Mitgliedsstaaten und in EFTA-Ländern - ausgenommen Frankreich. Der Betrieb dieses Geräts ist in den folgenden Ländern erlaubt: AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Gebrauchshinweise:

- Um den in Europa geltenden nationalen Vorschriften zum Nutzen des Funkspektrums weiterhin zu entsprechen, werden Frequenz und Kanalbeschränkungen, dem jeweiligen Land, in dem das Gerät zum Einsatz kommt, entsprechend, auf die Produkte angewandt.

- Die Funktionalität im Ad-hoc-Modus bei Betrieb auf 5 GHz ist für dieses Gerät eingeschränkt. Bei dem Ad-hoc-Modus handelt es sich um eine Peer-to-Peer-Kommunikation zwischen zwei Client-Geräten ohneeinen Access Point.

- Access Points unterstützen die Funktionen DFS (Dynamic Frequency Selection) und TPC (Transmit Power Control) wie erforderlich bei Betrieb auf 5 GHz innerhalb der EU.

- Bitte schlagen Sie im Handbuch oder Datenblatt nach nach, ob Ihr Gerät eine 2,4 GHz und / oder 5 GHz Verbindung nutzt.

AVIS CONCERNANT L'UTILISATION DE LA RADIO SANS FIL LAN DANS LA COMMUNAUTÉ EUROPÉENNE (UNIQUEMENT POUR LES PRODUITS SANS FIL)

- Cet appareil est limité à un usage intérieur lorsqu'il est utilisé dans la Communauté européenne sur les canaux de la bande de 5,15 à 5,35 GHz afin de réduire les risques d'interférences.
- Cet appareil est un système de transmission à large bande (émetteur-récepteur) de 2,4 GHz, destiné à être utilisé dans tous les États-membres de l'UE et les pays de l'AELE. Cet équipement peut être utilisé dans les pays suivants : AL, AD, BE , BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT , MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Notes d'utilisation:

- Pour rester en conformité avec la réglementation nationale européenne en matière d'utilisation du spectre, des limites de fréquence et de canal seront appliquées aux produits selon le pays où l'équipement sera déployé.
- Cet appareil ne peut pas utiliser le mode Ad-hoc lorsqu'il fonctionne dans la bande de 5 GHz. Le mode Adhoc fournit une communication directe pair à pair entre deux périphériques clients sans point d'accès.
- Les points d'accès prendront en charge les fonctionnalités DFS (Dynamic Frequency Selection) et TPC (Transmit Power Control) au besoin lors du fonctionnement dans la bande de 5 GHz au sein de l'UE.
- Merci de vous référer au guide d'utilisation ou de la fiche technique afin de vérifier si votre produit utilise 2.4 GHz et/ou 5 GHz sans fil.

AVISO DE USO DE LA LAN DE RADIO INALÁMBRICA EN LA COMUNIDAD EUROPEA (SOLO PARA EL PRODUCTO INALÁMBRICO)

- El uso de este dispositivo está restringido a interiores cuando funciona en la Comunidad Europea utilizando canales en la banda de 5,15-5,35 GHz, para reducir la posibilidad de interferencias.
- Este dispositivo es un sistema de transmisión (transceptor) de banda ancha de 2,4 GHz, pensado para su uso en todos los estados miembros de la UE y en los países de la AELC. Este equipo se puede utilizar en AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Notas de uso:

- Para seguir cumpliendo las normas europeas de uso del espectro nacional, se aplicarán limitaciones de frecuencia y canal en los productos en función del país en el que se pondrá en funcionamiento el equipo.
- Este dispositivo tiene restringido el funcionamiento en modo Ad-hoc mientras funcione a 5 Ghz. El modo Ad-hoc es la comunicación directa de igual a igual entre dos dispositivos cliente sin un punto de acceso.
- Los puntos de acceso admitirán la funcionalidad DFS (Selección de frecuencia dinámica) y TPC (Control de la potencia de transmisión) si es necesario cuando funcionan a 5 Ghz dentro de la UE.
- Por favor compruebe el manual o la ficha de producto para comprobar si el producto utiliza las bandas inalámbricas de 2.4 GHz y/o la de 5 GHz.

AVVISO PER L'USO DI LAN RADIO WIRELESS NELLA COMUNITÀ EUROPEA (SOLO PER PRODOTTI WIRELESS)

- Nella Comunità europea, l'uso di questo dispositivo è limitato esclusivamente agli ambienti interni sui canali compresi nella banda da 5,15 a 5,35 GHz al fine di ridurre potenziali interferenze. Questo dispositivo è un sistema di trasmissione a banda larga a 2,4 GHz (ricetrasmittente), destinato all'uso in tutti gli stati membri dell'Unione europea e nei paesi EFTA.
- Questo dispositivo può essere utilizzato in AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Note per l'uso

- Al fine di mantenere la conformità alle normative nazionali europee per l'uso dello spettro di frequenze, saranno applicate limitazioni sulle frequenze e sui canali per il prodotto in conformità alle normative del paese in cui il dispositivo viene utilizzato.

- Questo dispositivo non può essere attivato in modalità Ad-hoc durante il funzionamento a 5 Ghz. La modalità Ad-hoc è una comunicazione diretta peer-to-peer fra due dispositivi client senza un punto di accesso.

- I punti di accesso supportano le funzionalità DFS (Dynamic Frequency Selection) e TPC (Transmit Power Control) richieste per operare a 5 Ghz nell'Unione europea.

- Ti invitiamo a fare riferimento al manuale del prodotto o alla scheda tecnica per verificare se il tuo prodotto utilizza le frequenze 2,4 GHz e/o 5 GHz.

KENNISGEVING VAN DRAADLOOS RADIO LAN-GEBRUIK IN DE EUROPESE GEMEENSCHAP (ALLEEN VOOR DRAADLOOS PRODUCT)

- Dit toestel is beperkt tot gebruik binnenshuis wanneer het wordt gebruikt in de Europese Gemeenschap gebruik makend van kanalen in de 5.15-5.35 GHz band om de kans op interferentie te beperken.

- Dit toestel is een 2.4 GHz breedband transmissiesysteem (transceiver) dat bedoeld is voor gebruik in alle EU lidstaten en EFTA landen. Deze uitrusting mag gebruikt worden in AL, AD, BE, BG, DK, DE, FI, FR, GR, GW, IS, IT, HR, LI, LU, MT, MK, MD, MC, NL, NO, AT, PL, PT, RO, SM, SE, RS, SK, ES, CI, HU, CY

Gebruiksaanwijzingen:

- Om de gebruiksvoorschriften van het Europese Nationale spectrum na te leven, zullen frequentie- en kanaalbeperkingen worden toegepast op de producten volgens het land waar de uitrusting gebruikt zal worden.

- Dit toestel kan niet functioneren in Ad-hoc mode wanneer het gebruikt wordt in 5 GHz. Ad-hoc mode is directe peer-to-peer communicatie tussen twee klantenapparaten zonder een toegangspunt.

- Toegangspunten ondersteunen DFS (Dynamic Frequency Selection) en TPC (Transmit Power Control) functionaliteit zoals vereist bij gebruik in 5 GHz binnen de EU.

- Raadpleeg de handleiding of de datasheet om te controleren of uw product gebruik maakt van 2.4 GHz en/of 5 GHz.

All Models

SAFETY INSTRUCTIONS

The following general safety guidelines are provided to help ensure your own personal safety and protect your product from potential damage. Remember to consult the product user instructions for more details.

- Static electricity can be harmful to electronic components. Discharge static electricity from your body (i.e. touching grounded bare metal) before touching the product.
- Do not attempt to service the product and never disassemble the product. For some products with a user replaceable battery, please read and follow the instructions in the user manual.
- Do not spill food or liquid on your product and never push any objects into the openings of your product.
- Do not use this product near water, areas with high humidity, or condensation unless the product is specifically rated for outdoor application.
- Keep the product away from radiators and other heat sources.
- Always unplug the product from mains power before cleaning and use a dry lint free cloth only.

SICHERHEITSVORSCHRIFTEN

Die folgenden allgemeinen Sicherheitsvorschriften dienen als Hilfe zur Gewährleistung Ihrer eigenen Sicherheit und zum Schutz Ihres Produkts. Weitere Details finden Sie in den Benutzeranleitungen zum Produkt.

- Statische Elektrizität kann elektronischen Komponenten schaden. Um Schäden durch statische Aufladung zu vermeiden, leiten Sie elektrostatische Ladungen von Ihrem Körper ab, (z. B. durch Berühren eines geerdeten blanken Metallteils), bevor Sie das Produkt berühren.
- Unterlassen Sie jeden Versuch, das Produkt zu warten, und versuchen Sie nicht, es in seine Bestandteile zu zerlegen. Für einige Produkte mit austauschbaren Akkus lesen Sie bitte das Benutzerhandbuch und befolgen Sie die dort beschriebenen Anleitungen.
- Vermeiden Sie, dass Speisen oder Flüssigkeiten auf Ihr Produkt gelangen, und stecken Sie keine Gegenstände in die Gehäuseschlitze oder -öffnungen Ihres Produkts.
- Verwenden Sie dieses Produkt nicht in unmittelbarer Nähe von Wasser und nicht in Bereichen mit hoher Luftfeuchtigkeit oder Kondensation, es sei denn, es ist speziell zur Nutzung in Außenbereichen vorgesehen und eingestuft.
- Halten Sie das Produkt von Heizkörpern und anderen Quellen fern, die Wärme erzeugen.
- Trennen Sie das Produkt immer von der Stromzufuhr, bevor Sie es reinigen und verwenden Sie dazu ausschließlich ein trockenes fusselfreies Tuch.

CONSIGNES DE SÉCURITÉ

Les consignes générales de sécurité ci-après sont fournies afin d'assurer votre sécurité personnelle et de protéger le produit d'éventuels dommages. Veuillez consulter les consignes d'utilisation du produit pour plus de détails.

- L'électricité statique peut endommager les composants électroniques. Déchargez l'électricité statique de votre corps (en touchant un objet en métal relié à la terre par exemple) avant de toucher le produit.
- N'essayez pas d'intervenir sur le produit et ne le démontez jamais. Pour certains produits contenant une batterie remplaçable par l'utilisateur, veuillez lire et suivre les consignes contenues dans le manuel d'utilisation.
- Ne renversez pas d'aliments ou de liquide sur le produit et n'insérez jamais d'objets dans les orifices.

- N'utilisez pas ce produit à proximité d'un point d'eau, de zones très humides ou de condensation sauf si le produit a été spécifiquement conçu pour une application extérieure.
- Éloignez le produit des radiateurs et autres sources de chaleur.
- Débranchez toujours le produit de l'alimentation avant de le nettoyer et utilisez uniquement un chiffon sec non pelucheux.

INSTRUCCIONES DE SEGURIDAD

Las siguientes directrices de seguridad general se facilitan para ayudarle a garantizar su propia seguridad personal y para proteger el producto frente a posibles daños. No olvide consultar las instrucciones del usuario del producto para obtener más información.

- La electricidad estática puede resultar nociva para los componentes electrónicos. Descargue la electricidad estática de su cuerpo (p. ej., tocando algún metal sin revestimiento conectado a tierra) antes de tocar el producto.
- No intente realizar el mantenimiento del producto ni lo desmonte nunca. Para algunos productos con batería reemplazable por el usuario, lea y siga las instrucciones del manual de usuario.
- No derrame comida o líquidos sobre el producto y nunca deje que caigan objetos en las aberturas del mismo.
- No utilice este producto cerca del agua, en zonas con humedad o condensación elevadas a menos que el producto esté clasificado específicamente para aplicación en exteriores.
- Mantenga el producto alejado de los radiadores y de otras fuentes de calor.
- Desenchufe siempre el producto de la alimentación de red antes de limpiarlo y utilice solo un paño seco sin pelusa.

ISTRUZIONI PER LA SICUREZZA

Le seguenti linee guida sulla sicurezza sono fornite per contribuire a garantire la sicurezza personale degli utenti e a proteggere il prodotto da potenziali danni. Per maggiori dettagli, consultare le istruzioni per l'utente del prodotto.

- L'elettricità statica può essere pericolosa per i componenti elettronici. Scaricare l'elettricità statica dal corpo (ad esempio toccando una parte metallica collegata a terra) prima di toccare il prodotto.
- Non cercare di riparare il prodotto e non smontarlo mai. Per alcuni prodotti dotati di batteria sostituibile dall'utente, leggere e seguire le istruzioni riportate nel manuale dell'utente.
- Non versare cibi o liquidi sul prodotto e non spingere mai alcun oggetto nelle aperture del prodotto.
- Non usare questo prodotto vicino all'acqua, in aree con elevato grado di umidità o soggette a condensa a meno che il prodotto non sia specificatamente approvato per uso in ambienti esterni.
- Tenere il prodotto lontano da caloriferi e altre fonti di calore.
- Scollegare sempre il prodotto dalla presa elettrica prima di pulirlo e usare solo un panno asciutto che non lasci filacce.

VEILIGHEIDSINFORMATIE

De volgende algemene veiligheidsinformatie werd verstrekt om uw eigen persoonlijke veiligheid te waarborgen en uw product te beschermen tegen mogelijke schade. Denk eraan om de gebruikersinstructies van het product te raadplegen voor meer informatie.

- Statische elektriciteit kan schadelijk zijn voor elektronische componenten. Ontlaad de statische elektriciteit van uw lichaam (d.w.z. het aanraken van geaard bloot metaal) voordat uhet product aanraakt.

- U mag nooit proberen het product te onderhouden en u mag het product nooit demonteren. Voor sommige producten met door de gebruiker te vervangen batterij, dient u de instructies in de gebruikershandleiding te lezen en te volgen.
- Mors geen voedsel of vloeistof op uw product en u mag nooit voorwerpen in de openingen van uw product duwen.
- Gebruik dit product niet in de buurt van water, gebieden met hoge vochtigheid of condensatie, tenzij het product specifiek geclassificeerd is voor gebruik buitenshuis.
- Houd het product uit de buurt van radiators en andere warmtebronnen.
- U dient het product steeds los te koppelen van de stroom voordat u het reinigt en gebruik uitsluitend een droge pluisvrije doek.

Disposing of and Recycling Your Product

ENGLISH   EN

This symbol on the product or packaging means that according to local laws and regulations this product should be not be disposed of in household waste but sent for recycling. Please take it to a collection point designated by your local authorities once it has reached the end of its life, some will accept products for free. By recycling the product and its packaging in this manner you help to conserve the environment and protect human health.

D-Link and the Environment

At D-Link, we understand and are committed to reducing any impact our operations and products may have on the environment. To minimise this impact D-Link designs and builds its products to be as environmentally friendly as possible, by using recyclable, low toxic materials in both products and packaging.

D-Link recommends that you always switch off or unplug your D-Link products when they are not in use. By doing so you will help to save energy and reduce CO_2 emissions.

To learn more about our environmentally responsible products and packaging please visit **www.dlinkgreen. com**.

DEUTSCH   DE

Dieses Symbol auf dem Produkt oder der Verpackung weist darauf hin, dass dieses Produkt gemäß bestehender örtlicher Gesetze und Vorschriften nicht über den normalen Hausmüll entsorgt werden sollte, sondern einer Wiederverwertung zuzuführen ist. Bringen Sie es bitte zu einer von Ihrer Kommunalbehörde entsprechend amtlich ausgewiesenen Sammelstelle, sobald das Produkt das Ende seiner Nutzungsdauer erreicht hat. Für die Annahme solcher Produkte erheben einige dieser Stellen keine Gebühren. Durch ein auf diese Weise durchgeführtes Recycling des Produkts und seiner Verpackung helfen Sie, die Umwelt zu schonen und die menschliche Gesundheit zu schützen.

D-Link und die Umwelt

D-Link ist sich den möglichen Auswirkungen seiner Geschäftstätigkeiten und seiner Produkte auf die Umwelt bewusst und fühlt sich verpflichtet, diese entsprechend zu mindern. Zu diesem Zweck entwickelt und stellt D-Link seine Produkte mit dem Ziel größtmöglicher Umweltfreundlichkeit her und verwendet wiederverwertbare, schadstoffarme Materialien bei Produktherstellung und Verpackung.

D-Link empfiehlt, Ihre Produkte von D-Link, wenn nicht in Gebrauch, immer auszuschalten oder vom Netz zu nehmen. Auf diese Weise helfen Sie, Energie zu sparen und CO2-Emissionen zu reduzieren.

Wenn Sie mehr über unsere umweltgerechten Produkte und Verpackungen wissen möchten, finden Sie entsprechende Informationen im Internet unter **www.dlinkgreen.com**.

FRANÇAIS   FR

Ce symbole apposé sur le produit ou son emballage signifie que, conformément aux lois et règlementations locales, ce produit ne doit pas être éliminé avec les déchets domestiques mais recyclé. Veuillez le rapporter à un point de collecte prévu à cet effet par les autorités locales; certains accepteront vos produits gratuitement. En recyclant le produit et son emballage de cette manière, vous aidez à préserver l'environnement et à protéger la santé de l'homme.

D-Link et l'environnement

Chez D-Link, nous sommes conscients de l'impact de nos opérations et produits sur l'environnement et nous engageons à le réduire. Pour limiter cet impact, D-Link conçoit et fabrique ses produits de manière aussi écologique que possible, en utilisant des matériaux recyclables et faiblement toxiques, tant dans ses produits que ses emballages.

D-Link recommande de toujours éteindre ou débrancher vos produits D-Link lorsque vous ne les utilisez pas. Vous réaliserez ainsi des économies d'énergie et réduirez vos émissions de CO2.

Pour en savoir plus sur les produits et emballages respectueux de l'environnement, veuillez consulter le **www.dlinkgreen.com**.

ESPAÑOL   ES

Este símbolo en el producto o el embalaje significa que, de acuerdo con la legislación y la normativa local, este producto no se debe desechar en la basura doméstica sino que se debe reciclar. Llévelo a un punto de recogida designado por las autoridades locales una vez que ha llegado al fin de su vida útil; algunos de ellos aceptan recogerlos de forma gratuita. Al reciclar el producto y su embalaje de esta forma, contribuye a preservar el medio ambiente y a proteger la salud de los seres humanos.

D-Link y el medio ambiente

En D-Link, comprendemos y estamos comprometidos con la reducción del impacto que puedan tener nuestras actividades y nuestros productos en el medio ambiente. Para reducir este impacto, D-Link diseña y fabrica sus productos para que sean lo más ecológicos posible, utilizando materiales reciclables y de baja toxicidad tanto en los productos como en el embalaje.

D-Link recomienda apagar o desenchufar los productos D-Link cuando no se estén utilizando. Al hacerlo, contribuirá a ahorrar energía y a reducir las emisiones de CO2.

Para obtener más información acerca de nuestros productos y embalajes ecológicos, visite el sitio **www.dlinkgreen.com**.

ITALIANO   IT

La presenza di questo simbolo sul prodotto o sulla confezione del prodotto indica che, in conformità alle leggi e alle normative locali, questo prodotto non deve essere smaltito nei rifiuti domestici, ma avviato al riciclo. Una volta terminato il ciclo di vita utile, portare il prodotto presso un punto di raccolta indicato dalle autorità locali. Alcuni questi punti di raccolta accettano gratuitamente i prodotti da riciclare. Scegliendo di riciclare il prodotto e il relativo imballaggio, si contribuirà a preservare l'ambiente e a salvaguardare la salute umana.

D-Link e l'ambiente

D-Link cerca da sempre di ridurre l'impatto ambientale dei propri stabilimenti e dei propri prodotti. Allo scopo di ridurre al minimo tale impatto, D-Link progetta e realizza i propri prodotti in modo che rispettino il più possibile l'ambiente, utilizzando materiali riciclabili a basso tasso di tossicità sia per i prodotti che per gli imballaggi.

D-Link raccomanda di spegnere sempre i prodotti D-Link o di scollegarne la spina quando non vengono utilizzati. In questo modo si contribuirà a risparmiare energia e a ridurre le emissioni di anidride carbonica.

Per ulteriori informazioni sui prodotti e sugli imballaggi D-Link a ridotto impatto ambientale, visitate il sito all'indirizzo **www.dlinkgreen.com**.

NEDERLANDS   NL
Dit symbool op het product of de verpakking betekent dat dit product volgens de plaatselijke wetgeving niet mag worden weggegooid met het huishoudelijk afval, maar voor recyclage moeten worden ingeleverd. Zodra het product het einde van de levensduur heeft bereikt, dient u het naar een inzamelpunt te brengen dat hiertoe werd aangeduid door uw plaatselijke autoriteiten, sommige autoriteiten accepteren producten zonder dat u hiervoor dient te betalen. Door het product en de verpakking op deze manier te recyclen helpt u het milieu en de gezondheid van de mens te beschermen.

D-Link en het milieu

Bij D-Link spannen we ons in om de impact van onze handelingen en producten op het milieu te beperken. Om deze impact te beperken, ontwerpt en bouwt D-Link zijn producten zo milieuvriendelijk mogelijk, door het gebruik van recycleerbare producten met lage toxiciteit in product en verpakking.

D-Link raadt aan om steeds uw D-Link producten uit te schakelen of uit de stekker te halen wanneer u ze niet gebruikt. Door dit te doen bespaart u energie en beperkt u de CO2-emissies.

Breng een bezoek aan **www.dlinkgreen.com** voor meer informatie over onze milieuverantwoorde producten en verpakkingen.

POLSKI   PL

Ten symbol umieszczony na produkcie lub opakowaniu oznacza, że zgodnie z miejscowym prawem i lokalnymi przepisami niniejszego produktu nie wolno wyrzucać jak odpady czy śmieci z gospodarstwa domowego, lecz należy go poddać procesowi recyklingu. Po zakończeniu użytkowania produktu, niektóre odpowiednie do tego celu podmioty przyjmą takie produkty nieodpłatnie, dlatego prosimy dostarczyć go do punktu zbiórki wskazanego przez lokalne władze. Poprzez proces recyklingu i dzięki takiemu postępowaniu z produktem oraz jego opakowaniem, pomogą Państwo chronić środowisko naturalne i dbać o ludzkie zdrowie.

D-Link i środowisko

D-Link podchodzimy w sposób świadomy do ochrony otoczenia oraz jesteśmy zaangażowani w zmniejszanie wpływu naszych działań i produktów na środowisko naturalne. W celu zminimalizowania takiego wpływu firma D-Link konstruuje i wytwarza swoje produkty w taki sposób, aby były one jak najbardziej przyjazne środowisku, stosując do tych celów materiały nadające się do powtórnego wykorzystania, charakteryzujące się małą toksycznością zarówno w przypadku samych produktów jak i opakowań.

Firma D-Link zaleca, aby Państwo zawsze prawidłowo wyłączali z użytku swoje produkty D-Link, gdy nie są one wykorzystywane. Postępując w ten sposób pozwalają Państwo oszczędzać energię i zmniejszać emisje CO2.

Aby dowiedzieć się więcej na temat produktów i opakowań mających wpływ na środowisko prosimy zapoznać się ze stroną Internetową **www.dlinkgreen.com**.

ČESKY   CZ

Tento symbol na výrobku nebo jeho obalu znamená, že podle místně platných předpisů se výrobek nesmí vyhazovat do komunálního odpadu, ale odeslat k recyklaci. Až výrobek doslouží, odneste jej prosím na sběrné místo určené místními úřady k tomuto účelu. Některá sběrná místa přijímají výrobky zdarma. Recyklací výrobku i obalu pomáháte chránit životní prostředí i lidské zdraví.

D-Link a životní prostředí

Ve společnosti D-Link jsme si vědomi vlivu našich provozů a výrobků na životní prostředí a snažíme se o minimalizaci těchto vlivů. Proto své výrobky navrhujeme a vyrábíme tak, aby byly co nejekologičtější, a ve výrobcích i obalech používáme recyklovatelné a nízkotoxické materiály.

Společnost D-Link doporučuje, abyste své výrobky značky D-Link vypnuli nebo vytáhli ze zásuvky vždy, když je nepoužíváte. Pomůžete tak šetřit energii a snížit emise CO2.

Více informací o našich ekologických výrobcích a obalech najdete na adrese **www.dlinkgreen.com**.

MAGYAR   HU

Ez a szimbólum a terméken vagy a csomagoláson azt jelenti, hogy a helyi törvényeknek és szabályoknak megfelelően ez a termék nem semmisíthető meg a háztartási hulladékkal együtt, hanem újrahasznosításra kell küldeni. Kérjük, hogy a termék élettartamának elteltét követően vigye azt a helyi hatóság által kijelölt gyűjtőhelyre. A termékek egyes helyeken ingyen elhelyezhetők. A termék és a csomagolás újrahasznosításával segíti védeni a környezetet és az emberek egészségét.

A D-Link és a környezet

A D-Linknél megértjük és elkötelezettek vagyunk a műveleteink és termékeink környezetre gyakorolt hatásainak csökkentésére. Az ezen hatás csökkentése érdekében a D-Link a lehető leginkább környezetbarát termékeket tervez és gyárt azáltal, hogy újrahasznosítható, alacsony károsanyag-tartalmú termékeket gyárt és csomagolásokat alkalmaz.

A D-Link azt javasolja, hogy mindig kapcsolja ki vagy húzza ki a D-Link termékeket a tápforrásból, ha nem használja azokat. Ezzel segít az energia megtakarításában és a széndioxid kibocsátásának csökkentésében.

Környezetbarát termékeinkről és csomagolásainkról további információkat a **www.dlinkgreen.com** weboldalon tudhat meg.

NORSK NO

Dette symbolet på produktet eller forpakningen betyr at dette produktet ifølge lokale lover og forskrifter ikke skal kastes sammen med husholdningsavfall, men leveres inn til gjenvinning. Vennligst ta det til et innsamlingssted anvist av lokale myndigheter når det er kommet til slutten av levetiden. Noen steder aksepteres produkter uten avgift. Ved på denne måten å gjenvinne produktet og forpakningen hjelper du å verne miljøet og beskytte folks helse.

D-Link og miljøet

Hos D-Link forstår vi oss på og er forpliktet til å minske innvirkningen som vår drift og våre produkter kan ha på miljøet. For å minimalisere denne innvirkningen designer og lager D-Link produkter som er så miljøvennlig som mulig, ved å bruke resirkulerbare, lav-toksiske materialer både i produktene og forpakningen.

D-Link anbefaler at du alltid slår av eller frakobler D-Link-produkter når de ikke er i bruk. Ved å gjøre dette hjelper du å spare energi og å redusere CO2-utslipp.

For mer informasjon angående våre miljøansvarlige produkter og forpakninger kan du gå til **www.dlinkgreen.com**.

DANSK DK

Dette symbol på produktet eller emballagen betyder, at dette produkt i henhold til lokale love og regler ikke må bortskaffes som husholdningsaffald, mens skal sendes til genbrug. Indlever produktet til et indsamlingssted som angivet af de lokale myndigheder, når det er nået til slutningen af dets levetid. I nogle tilfælde vil produktet blive modtaget gratis. Ved at indlevere produktet og dets emballage til genbrug på denne måde bidrager du til at beskytte miljøet og den menneskelige sundhed.

D-Link og miljøet

Hos D-Link forstår vi og bestræber os på at reducere enhver indvirkning, som vores aktiviteter og produkter kan have på miljøet. For at minimere denne indvirkning designer og producerer D-Link sine produkter, så de er så miljøvenlige som muligt, ved at bruge genanvendelige materialer med lavt giftighedsniveau i både produkter og emballage.

D-Link anbefaler, at du altid slukker eller frakobler dine D-Link-produkter, når de ikke er i brug. Ved at gøre det bidrager du til at spare energi og reducere CO2-udledningerne.

Du kan finde flere oplysninger om vores miljømæssigt ansvarlige produkter og emballage på **www.dlinkgreen.com**.

SUOMI FI

Tämä symboli tuotteen pakkauksessa tarkoittaa, että paikallisten lakien ja säännösten mukaisesti tätä tuotetta ei pidä hävittää yleisen kotitalousjätteen seassa vaan se tulee toimittaa kierrätettäväksi. Kun tuote on elinkaarensa päässä, toimita se lähimpään viranomaisten hyväksymään kierrätyspisteeseen. Kierrättämällä käytetyn tuotteen ja sen pakkauksen autat tukemaan sekä ympäristön että ihmisten terveyttä ja hyvinvointia.

D-Link ja ympäristö

D-Link ymmärtää ympäristönsuojelun tärkeyden ja on sitoutunut vähentämään tuotteistaan ja niiden valmistuksesta ympäristölle mahdollisesti aiheutuvia haittavaikutuksia. Nämä negatiiviset vaikutukset minimoidakseen D-Link suunnittelee ja valmistaa tuotteensa mahdollisimman ympäristöystävällisiksi käyttämällä kierrätettäviä, alhaisia pitoisuuksia haitallisia aineita sisältäviä materiaaleja sekä tuotteissaan että niiden pakkauksissa.

Suosittelemme, että irrotat D-Link-tuotteesi virtalähteestä tai sammutat ne aina, kun ne eivät ole käytössä. Toimimalla näin autat säästämään energiaa ja vähentämään hiilidioksidipäästöjä.

Lue lisää ympäristöystävällisistä D-Link-tuotteista ja pakkauksistamme osoitteesta **www.dlinkgreen.com**.

SVENSKA   SE

Den här symbolen på produkten eller förpackningen betyder att produkten enligt lokala lagar och föreskrifter inte skall kastas i hushållssoporna utan i stället återvinnas. Ta den vid slutet av dess livslängd till en av din lokala myndighet utsedd uppsamlingsplats, vissa accepterar produkter utan kostnad. Genom att på detta sätt återvinna produkten och förpackningen hjälper du till att bevara miljön och skydda människors hälsa.

D-Link och miljön

På D-Link förstår vi och är fast beslutna att minska den påverkan våra verksamheter och produkter kan ha på miljön. För att minska denna påverkan utformar och bygger D-Link sina produkter för att de ska vara så miljövänliga som möjligt, genom att använda återvinningsbara material med låg gifthalt i både produkter och förpackningar.

D-Link rekommenderar att du alltid stänger av eller kopplar ur dina D-Link produkter när du inte använder dem. Genom att göra detta hjälper du till att spara energi och minska utsläpp av koldioxid.

PORTUGUÊS   PT

Este símbolo no produto ou embalagem significa que, de acordo com as leis e regulamentações locais, este produto não deverá ser eliminado juntamente com o lixo doméstico mas enviado para a reciclagem. Transporte-o para um ponto de recolha designado pelas suas autoridades locais quando este tiver atingido o fim da sua vida útil, alguns destes pontos aceitam produtos gratuitamente. Ao reciclar o produto e respectiva embalagem desta forma, ajuda a preservar o ambiente e protege a saúde humana.

A D-Link e o ambiente

Na D-Link compreendemos e comprometemo-nos com a redução do impacto que as nossas operações e produtos possam ter no ambiente. Para minimizar este impacto a D-Link concebe e constrói os seus produtos para que estes sejam o mais inofensivos para o ambiente possível, utilizando meteriais recicláveis e não tóxicos tanto nos produtos como nas embalagens.

A D-Link recomenda que desligue os seus produtos D-Link quando estes não se encontrarem em utilização. Com esta acção ajudará a poupar energia e reduzir as emissões de CO_2.
